THE NATIONAL ASSEMBLY

In elections held for the third time under the new Constitution on January 23rd, 1971, 184 candidates were nominated for the 50 seats (5 seats in each of 10 districts) There are no official political parties, the candidates atanding as individuals. In the 1971 elections, however, five members of the radical Arab Nationalist Movement were returned The vote is limited to natural born Kuwaiti males over 21 who are able to read and write (about 40,000 voters)

JUDICIAL SYSTEM

There is a codified system of law based largely upon the Egyptian system In criminal matters, minor contraventions are dealt with by Magistrates Courts, felonies by Criminal Assize Courts. Appeal in the case of misdemean-ours is to a Misdemeanours Court of Appeal.

Civil cases are heard by a General Court within which are separate chambers dealing with commercial cases.

other civil cases and matters of personal status. Appeal is to a High Court of Appeal. Matters of personal status may go beyond the High Court of Appeal to a Court of Cassation. In criminal cases, investigation of misdemeanours is the responsibility of the police, while responsibility for the investigation of felonies lies with the Attorney-General's Office

RELIGION

MUSLIMS

The inhabitants are mainly Muslims of the Sunni and Shiite sects.

CHRISTIANS

Anglican Chaplain in Kuwait: Rev. K. W. T. W. Johnson, c/o Kuwait Oil Co. Ltd., 3 Ninth Avenue, Ahmadi 6, Kuwait.

Roman Catholic: Right Rev. Mgr. V. SAN MIGUEL, O.C.D., Administrator Apostolic of Kuwait, Bishop's House P.O.B. 266, Kuwait.

National Evangelical Church in Kuwait: Rev. Yuser Abdul Noor, Box 80, Kuwait; a United Protestant Church founded by the Reformed Church in America; services in Arabic, English and Malayalam.

There are also Armonian, Greek, Coptic and Syrian Orthodox Churches in Kuwait.

THE PRESS

Article 37 of the Constitution specifies the following as regards the Press:

"Freedom of the press, printing and publishing shall be guaranteed in accordance with the conditions and manner specified by Law."

As such, the press is not pre-censored, and all freedom is guaranteed within the framework of the Press Law. A new draft bill of the Press Law has been sent to the National Assembly.

- Shuaiba Industrial Development Board: P.O.B. 4690, Kuwait; f. 1964; an independent public body developing a new town with dockyard and industrial estate.

TRANSPORT

ROADS

Roads in the towns are metalled and the most important are dual carriageway. There are metalled roads to Ahmadi, Mina Al-Ahmadi and other centres of population in Kuwait, and to the Iraqi and Saudi Arabian borders.

- Automobile Association of Kuwait and the Gulf: P.O.B. 2100, Kuwait; Gen. Man. A. W. Monayes.
- Kuwait Automobile and Touring Club: Airport Rd., Khaldiah, P.O.B. 2100, Kuwait; Gen. Man. A. W. Monayes.
- Kuwait Transport Co. S.A.K.: Kuwait; provides internal bus service; regular service to Iran inaugurated December 1968.

SHIPPING

A modern port has been built at Shuwaikh, two miles west of Kuwait Town, which is capable of handling simultaneously up to eight large cargo ships and several smaller ships. Ships of British and other lines make regular calls.

A second port is under construction at Shuaiba to the south of Kuwait.

The oil port at Mina al-Ahmadi, 25 miles south of Kuwait Town, is capable of handling the largest oil tankers affoat, and oil exports of over 2 million barrels per day.

- Kuwait Oil Tanker Co. S.A.K.: P.O.B. 810, Kuwait; f. 1957; 1,700 shareholders; cap. KD 11.5m.; owns 6 vessels totalling 800,000 deadweight tons; sole tanker agents for Mina al Ahmadi and agents for other ports.
- Kuwait Shipping Co. S.A.K.: P.O.B. Safat 3636, Kuwait; f. 1965; 75 per cent government owned; services to Europe and the Far East; 14 vessels totalling 190,000 tons; fully paid cap. KD 6m.; Gen. Man. D. H. Top.

CIVIL AVIATION

Kuwait Airways Corporation: Kuwait International Airport, P.O.B. 394, Kuwait; f. 1954; government owned; services to Cairo, Beirut, Damascus, Amman, Baghdad, Aden, Teheran, Abadan, Abu Dhabi, Bahrain, Dhahran, Doha, Dubai, Karachi, Bombay, London, Paris, Rome, Geneva, Athens and Frankfurt; fleet includes two Trident 1E, two Comet 4C and three Boeing 707-320C; Chair. Faisal Saoud Al-Fulaij; Man. Dir. Jassim Yousuf al-Marzook; publs. Alboraq (magazine), Bulletin.

Kuwait is also served by the following airlines: Air India, Alia, Alitalia, B.O.A.C., C.S.A. (Czechoslovakia), Democratic Yemen Airlines, Gulf Aviation, Iranair, Iraq Airways, Japan Air Lines, K.L.M., Lufthansa, M.E.A., P.I.A. (Pakistan), Saudi Arabian Airlines, Syrian Arab Airlines, U.A.A. and Yemen Airways

EDUCATION

Within the last few years a comprehensive system of kindergarten elementary intermediate and secondary schools has been built up and compulsory education now from 6 to r, was introduced in 1956-67 A breasent there are all the control of the contr

In addition to the Secondary Schools there is a Techmeal Institute for boys two Teacher Transing Institutes (one for men and the other for women) a Religious Institute a Technical Secondary School for Girls A Post secondary Teacher Training College (two year study) was established during the academic year 1967-68

There are seven institutes for physically handicapped children is mentally retarded (two) hand and partially sighted (two) deaf and hard-of hearing (two) and one for polomyeltus pupils. The Ministry decided to centralize all these institutes in a new compound large enough to include them all in a project beginning in April 1956

There were 917 Kuwait students studying abroad on government scholarships during the accdemic year 1907-68 The majority of them are in U.A. U.S.A. and Britain The Kuwait University was opened during the accdemic year 1906-67 and since the Kuwait students have been sent abroad mainly for higher studies for which there is no facility in the University

Three hundred and forty pupils from nearby Arab states are studying in Kwawit at Intermediate and Secondary schools on Kuwat Government scholarships. The state is also providing scholarships for 60 Arab students to pursue that studies at the Kuwait University. For the education of adults there are 40 centres with an excellent of 23 94 staffed by 711 part time teachers. The Ministry also supervises an additional 85 privately owned school) junes with an entrollment of 15 950 pupils. In the past the following the control of 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pupils of 15 pupils and 15 pupils of 15 pupils and 15 pupils of 15 pup

Lebanon

PHYSICAL AND SOCIAL GEOGRAPHY

The creation, after 1918, of the modern State of the Lebanon first under French Mandatorv rule and then as an independent territory was designed to recognize the nationalist aspirations of a number of Christian groups that had hved for many centuries under Muslim rule along the coast of the eastern Mediterranean and in the hills immediately adjacent At least as early as the sixteenth century A D there had been particularist Christian feeling that ultimately resulted in the grant of antonomy, though not independence to Christians living in the territory of "Mount Lebanon', which geographically was the hill region immediately inland and extending some 20-3n rules north and south of Beirut The territory of Mount Lebanon was later expanded owing to French interest, into the much larger area of "Greater Lebanon" with from tiers running along the crest of the Anti Lebanon mountains and reaching the sea some miles north of Tripoli to form the boundary with Syria In the south there is a frontier with Israel, running inlaud from the promontory of Ras an Nakura to the head of the Jordan Valley In drawing the frontiers so as to give a measure of geographical pnity to the new State which now occupies an area of 4015 square miles large non-Christian elements of Mus lims and Druses were included so that at the present day the Christians of the Lebanon form only about half the total population. Many Christians have emigrated to North and South America, and the relatively higher birth rate of the non Christian groups is a further factor in alterns the balance of numbers

PHYSICAL FEATURES

Structurally, the Lebanon consuts of an enormous simple upfold of rocks that runs parallel to the coast There is, first a very narrow and broken flat coastal strip —hardly a true plain—then the land rises steeply to a senes of imposing crests and ridges. The bighest crest of all is Qurnet as Sanda, just over 10 000 ft, high lying south east of Tripoli Mount Sannin north-east of Beirut is over 9 000 ft. A few miles east of the summits there is a preci pitous drop along a sharp line to a broad troughlile valley. known as the Bekaa (Biga), about 10 miles wide and some 70 to 80 miles long. The eastern side of the Beksa is formed by the Ant, Lebanon mountains which rise to 9 000 ft., and their southern continuation, the Hermon Range, of about the same height. The floor of the Bekan Valley, though much below the level of the surrounding mountain ranges lies in places at 3 000 ft above sea level with a low divide in the region of Baalbek Two rivers rise in the Belaathe Orontes which flows northwards into Syria and the Gharb depression ultimately reaching the Mediterranean through the Turkish territory of Antioch and the River Litani (Leontes) This latter river flows southwards, and then at a short distance from the Israeli frontier makes a sudden bend westwards and plunges through the Lebanon mountains by a deep gorge Plans are now partly complete to develop the waters of the Litani in this regino for irrigation and hydro-electric power

There exists in the Lebanon an unusual feature of geological structure which is not present in either of the adjacent regions of Syria and Israel This is the occurrence of a layer of non porons rocks within the upfold forming the Lebanon mountains, and, because of this layer, water is forced in the sorface in considerable quantities, producing larges typing as the number of the layer of the considerable considerable of the social time and the mountain of the social and control of the social and control of the social and control of the social and is so the social and large of the social and large, are relatively well watered and cultivation is possible up in a height of 4 ooo or 5 oos the

. . .

With the great confirmats of relief, and the configuration of the many ranges, which he across the path of the prevail ong wateridy wands, there is wide variety in climatic conditions. The coastal lowlands are moderately bot in summer, and warm in winter, with complete absence of frost. But only 500 to mules saway in the hills there is a heavy wanter snowfall and the higher hills are covered from December to May, giving the unusual visit for the Middle East of snow clast peaks. From this the name Lebanon (Jaban-Aramac for "white") is small to originate The Delaca has a distinctly hot summer, as it is shut off from the tempering effect of the east.

Rainfall is on the whole abundant, but it decreases rapidly towards the east, so that the Belas and Anti-Lebanon are definitely direr than the west On the coast, between 30 and 40 suches fall annually, with up to 50 mcbes and the second of

ECONOMIC LIFE

The occurrence of high mountains near the sea, and the relatively abundant supplies of spring water have had a marked influence on economic development within the Lebanon Owing to the successive levels of terrain an unusually wide range of crops can be grown from bananas and pineapples on the hot, damp coastlands olives, vines and figs on the lowest footbills, cereals, apricots and peaches on the middle slopes to apples and potatoes on the highest levels. These latter are the aristocrats of the Lebanese markets, since they are rarest, and, with the growing market in the oilfield areas of Arabia and the Persian Gulf, they fetch the highest price Export of fruit is therefore an important item Then, too, ahundant natural water has led in the growth of pinewoods and evergreen groves, which add greatly to the already considerable scenic beauty of the western bill country There has hence grown up an important tourist trade centred in the small hill villages, some of which have casmos, luxury hotels, and cinemas Main activity is during the summer months, when wealthy Middle Easterners and others arrive, but there is a smaller winter sports season, when ski ing is carried on

In addition, the geographical situation of the Lebanon, as a "façade' to the inland territories of Syria, Jordan, and even northern Iraq and sonthern Turkey, enables the

Lebanese ports to act as the commercial outlet for a very wide region. The importance of Beirut as a commercial centre is due in large part to the fact that the Lebanon is a free market. Over half of the volume of Lebanese trade is transit traffic, and the Lebanon handles most of the trade of Jordan. Her own exports are mostly agricultural products. Byblos claims to be the oldest port in the world; Tyre and Sidon were for long world-famous, and the latter is now reviving as the Mediterranean terminal of the Tapline (Trans-Arabian Pipe Line) from Saudi Arabia. Another ancient centre, Tripoli, is also a terminal of the I.P.C. pipeline from Iraq. Beirut is now however the leading town of the country, and contains one-quarter of the total population. Though local resources are not in general very great (there are no minerals or important raw materials in the Lebanon) the city lives by commercial activity on a surprising scale, developed by the ingenuity and opportunism of its merchant class. The opening in 1951 of a commercial airport designed for jet airliners, before any such aircraft were actually in use in the world, is typical of the forward-looking attitude of many Lebanese.

Beirut has of recent years come to serve as a financial and holiday centre for the less attractive but oil rich parts of the Middle East. Transfer of financial credit from the Middle East to Zürich, Paris, London, New York and Tokyo; a trade in gold and diamonds; and some connexion with the narcotic trade of the Middle East—all these give the city a very special function. In addition, the town provides discreet distraction for all types of visitor.

RACE AND LANGUAGE

It is difficult to summarise the racial affinities of the Lebanese people. The western lowlands have an extremely mixed population possibly describable only as "Levantine". Basically Mediterranean, there are many other elements, including remarkably fair individuals—Arabs with blonde hair and grey eyes, who are possibly descendants of the Crusaders. The remaining parts of the country show a more decided Armenoid tendency, with darker colouring, broader head-form, and more pronounced facial features. In addition, small refugee groups, who came to the more inaccessible mountain zones in order to escape persecution, often have a different racial ancestry, so that parts of the Lebanon form a mosaic of varying racial and cultural elements. Almost all Middle Eastern countries are represented racially within the Lebanon.

Arabic is current over the whole country, but owing to the high level of education (probably the highest in any Middle Eastern country) and to the considerable volume of temporary emigration, English, French and even Spanish are widely understood. French is probably still the leading European language (though English is tending to replace it) and some of the higher schools and one university teach basically in this language. In addition, Aramaic is used by some religious sects, but only for ritual—there are no Aramaic speaking villages as in Syria.

HISTORY

ANGIENT AND MEDIEVAL HISTORY

In the Ancient World the Lebanon was important for its pine, fir, and cedarwood, which neighbouring powers, poorly supplied with timber resources, coveted so much that during the long period of Egyptian, Assyrian, Persian, and Seleucid rule, the exploitation of the forests of the Lebanon was normally a royal privilege. The area was also mined for its iron and copper in the time of the Ptolemies and the Romans. Gradually the Lebanon came to have a distinct history of its own, for the mountainous character of the region prevented any complete subjugation to outside authority. It is probable that the Arab conquest of Syria did not include the "mountain", to which fled all those who, for one reason or another, were opposed to the Arab domination. The Caliph Mu'awiya (661-80) made some effort to assert a greater control, but the resistance of the native Aramaean Christians was reinforced by the arrival of the Mardaites from the fastnesses of the Taurus and the Amanus. These Christian nomads, led by Byzantine officers, made determined advances into the Lebanon, late in the seventh century, and seem to have united with the Maronite Christians who were later to become a Uniate Church of the Roman communion and to have a predominant role in the history of the Lebanon. The Caliph Abd al-Malik (685-705) paid tribute to Byzantium in return for a withdrawal of most of the Mardaite forces; but it is clear that the "mountain" had begun to assume its historic function of providing a sure refuge for racial and religious

The Lebanon maintained its Christian character until the ninth century when, amongst other elements, the Arab tribe of Tanukh established a principality in the region of al-Gharb, near Beirut, and acted as a counterpoise to the Maronites of the North Lebanon, and as a bulwark against Byzantine threats from the sea. Gradually, Islam and, more slowly still, the Arabic language penetrated the "mountain" where, however, Syriac lingered on in the Maronite districts until the seventeenth century (it is still spoken in three villages of the Anti-Lebanon). In the ninth and tenth centuries Muslim sects began to take root in the "mountain" as, for example, the Shi'i, known in the Lebanon under the name of Mitwali and, in the eleventh century, the Druse faith, which won a firm hold in the South Lebanon.

The Crusaders established in this area the County of Tripolis and the lordships of Gibelet and Batron which enjoyed considerable support from the Christian population of the North Lebanon and were protected by a network of fortresses, the most famous of which is Hisn al-Akrad (Crac des Chevaliers). In the Mamluk period the rulers of the Lebanon continued to practise the art of political manoeuvring, thus maintaining for themselves a considerable degree of autonomy. The Tanukhid Amirs, after a long period in which they had played off the Crusaders against the Muslim amirates, had eventually taken the Mamluk side. In the North Lebanon the Maronites, under their bishop, maintained contact with the Italian Republics and also with the Roman Curia. Less fortunate were the Druses and the Mitwali who, in the last years of the thirteenth century, took advantage of the Mamluk preoccupation with the Mongol threat from Persia and began a protracted revolt which led to widespread devastation in the Central Lebanon.

THE OTTOMAN PERIOD

In the sixteenth century the Turcoman family of Assaf and, after them, the Banu Saifa rose to prominence in the area from Beirut to the north of Tripoli; while in the south the Druse house of Ma'an supplanted the Tanukhid amis. After the conquest of 1516-17, the Ottoman Suitan Schm I had confirmed the amus of the Lebanon in their privileges and had imposed only a small tribute yet not infrequently there was open consist with the Ottomans, as in 1548-5 when, after an attack on a convoy bearing the tribute from Egypt to Constantinople, the Suitan Minral III sent a punitive expedition to ravage the lands of the Banu Saifa and of the Druses

The power of the House of Ma'an now reached its zenith in the person of Fakhr ad din II (1386-1635), who by every possible means-bribery, intrigue, foreign alliance and open force-set out in establish an independent power over the whole of the Lebanon and parts of Palestine to the south To this end be entered into close relations with the Grand Duke of Tuscany, negotiating in 1608 a commercial agreement which contained a secret military clause directed against the Sultan In 1613 a naval and military expedition sent from the Porte compelled Fakhr ad-din to seek refuge with his Tuscan ally; bot, returning in 1618, he rapidly restored his power and within a few years was virtoal ruler from Aleppo to the borders of Egypt The Soltan, heavily engaged in repressing revolt in Anatolia, and in waging a long struggle with Persia, could do no more than recognise the fast accomply Fakhr ad-din now embarked on an ambitions programme of development for the Lebanon He sought to equip a standing army with arms imported from Tuscany Italian engineers and agricultural experts were employed to promote a better cultivation of the land and to increase the production of silk and olives The Christian peasantry were encouraged to move from the North to the South Lebanon Beirut and Sidon flourished as a result of the favour he showed to commerce, and religious musions from Enrope—Capuchins, Jesuits, Car-melites—were allowed to settle throughout Syria, a development of great importance for France which atrove to assert a "protectorate" over all the Catholic and other Christian elements in the Ottoman Empire However, the ambitions of Fakhr ad-din were doomed to failure when by 1632 the Sultan Murad IV assumed effective control at Constantinople The Pasha of Damascus supported by a naval squadron began a campaign to end the iodependent power of the Lebanon, and in 1635 Fakhr ad-din was executed at Constantinople

In 1697, the Ma an family became extinct, and was succeeded by the House of Shihab, which maintained its predominance until 1840 In the course of the eighteenth century, the Shihab Amus gradually consolidated their position against the other factions of the "Mountain" and for a while recovered tontrol of Berrut While normally they took care to remain on good terms with the Turkish Pashas of Tripoli, Sidon and Damascus, the Pashas, for their part strove to exercise an indirect control by fomenting the family rivalries and religious differences which always marked the course of Lebauese politics With the advent of Bashir II (1788-1840) the House of Shihab attained the height of its influence Not until the death of Ahmed Jazzar Pasha of Acre (1804), was he free to develop his power which he maintained by the traditional methods of playing off one Pasha against the other, and by bribing the officials of the Porte whenever it seemed expedient In 1810 he helped the Ottomans to repel an invasion by the Wahhabi power of Arabia, but in 1831 he sided openly with Muhammad Ali of Egypt, when that ruler invaded Syna Holding the Lebanon as the vassal of Egypt, he was compelled, however, to apply to the "Mountain" the un popular policy imposed by Ibrahim Pasha, the son of Muhammad Ab, with the result that a revolt broke out, which after the Egyptian withdrawal of 1840, led to his exile The age of the Lebanese Amirs was now at an end, for the Ottomans assumed control of the "Mountain". appointing two Kaimakams to rule there nue Druse and

the other Maronite under the supervision of the Pashas of Sidon and Beirut

The period of direct Ottoman rule saw the rapid growth, between the Druses and the Maronites, of a mistrust already visible during the time of the Egyptian dominance, and now fostered by the Ottomans as the only means of maintaining their influence over the Lebanon As a result of social and economic discontent, due to the slow disinte-gration of the old feudal system which had existed in the Lebanon since the Middle Ages the Maronite peasantry revolted in 1858 and destroyed the feudal privileges of the Maroute aristocracy, thus clearing the way for the crea-tion of a system of independent smallholdings. The Druse aristocracy, fearing the consequences of a similar discontent among their own Maronite peasantry, made a series of attacks on the Maronites of the North Lebanon who, owing to their own dissensions, could offer no effective resistance The dubious attitude of the Turkish Pashas in the face of these massacres of 1860, led to French intervention, and in 1864 to the formation of an organic statute for the Lebanon, which was now to become an antonomous province under a non Lebanese Ottoman Christian governor, appointed by the Sultan and approved by the Great Powers He was to be sided by an elected administrative council and a locally recruited police force. The statute also abolished legal fendalism in the area, thus consolidate ing the position won by the Maronite peasantry in 1858. The period from 1864 to 1914 was one of increasing prosperity, especially among the Christian elements, who also played an important role in the revival of Arab literature and Arab national feeling during the last years of the nmeteenth century

THE FRENCH MANDATE

The privileged position of the Lebanon ended when the Turks entered the war of 1914-18, and by 1918 the coastal area of the Lebanon were occupied by Fritish and French forces. In September 1920 the French created the State of the Greate Lebanon which included not only the former autonomous province but also Tripoli, Sidon, Tyre and Beruti, some of which had in cather times been under the control of the amirs of the Lebanon The period from 1920-30 was for the Lebanon one of peaceful progress A consti-tution was devised in 1926, which proved unworkable and was suspended in 1932, from which time the President of the Republic carried on the administration. He was, by convention, a Christian, while the Prime Minister was a Muslim, and both worked towards the achievement of a careful balance between the various religious communities nf the new State The Lebanon was not unaffected by the growth of the nationalist movement in Syria, some sections of which demanded the reduction of the Lebanon to its prewar limits and even the abolition of its existence as a separate State These demands found some support amongst the Snuns Muslims of the areas added to the Lebanon proper in 1920, with the result that the Syrian revolt of 1925-26 spread to parts of the southern Lebanon The Maronite Christians un the whole supported the idea of a separate Lebanon but were not united in their attitude towards France un the one hand, and the Arab States on the other The Franco Lebanese Treaty of 1936 differed little from that which France negotiated at the same time with Syria, the chief difference being that the military convention gave France wider military powers in the Lebanon than in Syria A reformed constitution was promulgated in 1937, but the French refusal to ratify the treaty in 1938, and the advent of war prolonged a situation which, if outwardly calm, concealed a considerable discon tent beneath the surface In November 1941 the Free French Commander, General Catroux formally proclaimed the Lebanon a sovereign independent State In September

1943 a new Parliament which had a strong nationalist majority soon came into conflict with the French authorities over the transfer of the administrative services. When, in November 1943, the Lebanese Government insisted on passing legislation which removed from the constitution all provisions considered to be inconsistent with the independence of the Lebanon, the French Delegate-General arrested the President and suspended the constitution. The other Arab States, together with Great Britain and America, supported the Lebanese demands and in 1944 France began to transfer to Lebanese control all important public services, save for the Troupes Speciales, i.e. local levies under French command, whose transfer the French authorities at first made conditional on the signing of a Franco-Lebanese Treaty. But in 1945 the Troupes Spéciales were handed over to the Lebanon without such conditions, and an agreement between France and the Lebanese Government in 1946 provided for the withdrawal of French troops.

MODERN HISTORY

Since 1946 the Lebanon has continued to view with great reserve all projects for a Greater Syria, or for the union of Syria and Iraq; and has striven to maintain a neutral role in those disputes which have rendered the unity of the Arab League largely illusory. Like the other Arab States, the Lebanon was at war with the new State of Israel from May 1948; but negotiated an armistice in March 1949. Just as in Syria the ill-success of the Arab arms had led eventually to the coup d'état of March 1949, so in the Lebanon the widespread disillusionment of Arab nationalist hopes prepared the ground for a conspiracy against the Government. This conspiracy was easily suppressed in June 1949 and its leader, Antun Sa'ade, was executed in July.

In internal affairs, the Lebanese Government has had to face considerable economic and financial difficulties since the end of the 1939-45 war. When, in January 1948, France devalued the franc (to which both the Lebanese and the Syrian currencies were linked) the Lebanon, economically weaker than Syria, felt obliged to sign a new agreement with France (February 1948). Syria refused to do so and began a long and complicated dispute with the Lebanon over the precise nature of the economic and financial arrangements which were to exist between the two States. In March 1950 the Lebanese Government refused a Syrian demand for full economic and financial union between Syria and the Lebanon. The severance of economic relations which now ensued did not end until the signing, in February 1952, of an agreement which arranged for the division of royalties due from oil companies, and for the status, for customs purposes, of agricultural and industrial products passing between the two states.

In recent years American influence has increased in the Lebanon as in the other states of the Middle East and the Lebanon now receives considerable revenues from the oil companies whose pipe-lines bring the oil of Iraq and Saudi Arabia through Lebanese territory. Negotiations with the oil companies, in the spring of 1952, foreshadowed an increase in such revenues. Pro-Russian influences have also been at work in various forms but have so far met with no real success.

In September 1952 the Lebanon had to face a severe crisis in her internal affairs. Political and economic unrest brought about the fall of the Lebanese Government and the resignation of President al-Khuri, who had held office since 1943. Cnarges of corruption were made against the President. During his long tenure of power he had indeed used all the arts of political influence and manoeuvre in order to impose a real degree of unity on a state where the divergent interests of Maronites, Sunni and Shi'i Muslims,

Druses, and other religious communities underlined the need for firm and coherent rule.

To an even greater degree, however, the crisis was due to causes of an economic order. The Lebanon had attained its independence in the period of war-time prosperity. The end of the war meant a progressive diminution of foreign expenditure in the Lebanon, e.g., by the French and British forces stationed there, and the gradual disappearance of war shortages which had favoured Lebanese trade. The devaluation of the French franc, the unsuccessful war with Israel, and above all the economic rupture with Syria gave rise to further difficulties. The break with Syria hit the Lebanon hard, for Syria was the chief provider of agricultural goods to the Lebanon and the chief customer for Lebanese industrial products. The effect of these developments was the more serious in that the Lebanon has a permanent adverse balance of trade, her annual deficit being largely covered by the revenues accruing to her from a wide variety of financial, commercial and transit services and by royalties paid to her by the oil companies. By 1952 there was much discontent arising from the high cost of living and from considerable unemployment. It was in fact a loose coalition of all the elements of opposition, both political and economic, which brought about the fall of the al-Khuri régime.

CONSTITUTIONAL REFORM

As a result of the crisis Camille Chamoun became the new President of the Republic. The new administration, with the Amir Khalid Chehab as Prime Minister, bound itself to introduce reforms, including changes in the electoral laws, the grant of the vote to women, revision of the Press laws and the reorganization of justice. The elections held in July 1953 led to the formation of a Chamber of Deputies, 44 in number and divided as follows: 13 Maronites, 9 Sunni Muslims, 8 Shi'i Muslims, 5 Orthodox Christians, 3 Greek Catholics, 3 Druses, 2 Orthodox Armenians and one member for other minorities.

Negotiations between Syria and the Lebanon over common economic problems continued throughout these years. The agreement of February 1952 had been prolonged for a period of one year. This agreement was renewed for a further six months in February 1953 and again for a similar period in August 1953. No final settlement, however, appears to be in sight as yet.

The elections held in the Lebanon during the summer of 1953 were carried out under the provisions of the electoral law of November 1952. Since the foundation of the republic, all seats in the Chamber of Deputies had been distributed among the various religious communities in proportion to their numerical strength. Parliament was thus an institution reflecting in itself the religious and social structure of the state and capable of harmonious function, provided that the electoral system which maintained a delicate balance between the communities suffered no violent and prejudicial change. At the same time, it contained a strong "feudal" element—the tribal and religious leaders who, with their trusted retainers, formed powerful groups within the Parliament and were often criticised as being "anti-national" in their aims and methods. To end or at least weaken this "feudalisation" of Lebanese political life, without, however, impairing the vital equilibrium between the Muslim and Christian communities, had long been the purpose of those who advocated a reasonable and wellconsidered policy of reform. The law of 1952 created 33 electoral districts (during the previous life of the republic the number had been, as a rule, five) and allotted to eleven of them two seats, and to the remainder one seat each. Of the sum-total of 44 seats the Maronites were now to receive 13, the Sunni Muslims 9, the Shi'i Muslims 8, the Greek Orthodox Christians 5 the Druses 3 the Greek Catholics 2 and the inther confessions (Protestant, Jewish, Nestonia, etc.) 2 seat. The election of 1953 dud in fact hung defeat to some of the Shi 1 lords of the south 11 would seem, however, that something more than electral reform will be needed, if the "leadal" aspects of the present regime are to be channested for the south of the long angular plant part of the protection of the protection of the long angular plants come about through the growth of well-organized political particles which cut across questions which are government more constanted. In character would succeed in preserving Enhances unity and concord as well as the old mider, grounded in the traditions of the past has so far been able to do

FOREIGN RELATIONS 1963-58

In the period 1953-56 financial and economic relations with Syria remained on a provisional basis much the same as that which had prevailed in the years 1950-53 earlier short term arrangements being renewed from time to time, as need arose Discussions with Syria in November 1953 over problems of currency, loan policy, banks and exchange difficulties made no effective progress The Lebanese
Government was more successful, however, in its efforts to
promote internal development. It was announced in August 1955 that the International Bank bad granted to the Lebanon a loan of 27 million dollars for the Litani river scheme which when completed, was expected to more than double the electric power available within the republic and also to irrigate a large acreage in the coastal region. The Lebanon signed a number of commercial treaties at this time which bore witness to the growing penetration of Soviet influence into the Arab lands with Russia itself in April 1954, with eastern Germany in November 1955, with Communist China in December 1955 and with Poland in January 1956

At the Asian African conference held at Bandung in April 1955 the Lebanese delegates expressed themselves in terms uniavourable to Communism Since that time the Bearut government has not allowed its relations with Russia and her allies to pass beyond the limits of normal commercial intercourse. In regard to the Baghdad Pact, concluded between Iraq and the Turkish Republic in February 1955, the Lebanon adopted a neutral attitude When, in March 1955, Egypt, supported by Sandi Arabia and (although with some hesitation) by Syria, attempted to form an alliance of Arab states from which Iraq was to be excluded the Lebanese Government declined to enter into the proposed scheme, but also assured Cauto that it did not intend to join the Baghdad Pact Its efforts were in fact directed, and not unsuccessfully, towards allaying, at least for the immediate future, the sharp tension then existing between Egypt and Iraq Moreover, as the visit of President Chamoun to Ankara at the end of March, and the return visit of President Bayar to Beirut in Tune revealed, the Lebanon, while anxious not to compromise the cause of Arab unity, saw no reason to avoid diplomatic endeavours which might bring about more amicable relations between the Turkish Republic and the Arab world

In the uniter of 1953/56 the Lebanot discussed with Syrat the possibilities of a defence past between the two countries The talks were broken oil, however, in January 1956 The Lebanon wanted the proposed agreement to be local in its scope, whereas Syrat desired it to have wider international implications Moreover, the Lebanose Covernment insisted on direct control of such Syrain trops as might be sent into the Lebanos in case of need add on the stripatation that the part listelf should be operative only in time of war The Foreign Multer of the Lebanon visited Sand Arabia in February The two wittles realizment they decision not to join the Eaghdod Pact and also resolved to work for a solution of the Palestense problem and for the furtherance of Arab unity and progress. In the same month a Sowet technical mission arrived at Henrit its role was stated, however, to be purely consultative in character The Foreign Minister of the USSR came to the Lebanon in Jane According to reports ussued at the time, his visit led to an exchange of views and to an offer of Sovit economic assistance to the views and to an offer of Sovit economic assistance to the had deceded to furnula the Lebanon with financial aid, amounting to 3 500 one dollars, for the luprovement of the international airport at Berint and of communications between the Lebanon and Syria.

The Lebanese Government had entered into negotiation with the Iras pletroleum Co in regard to an increase of the royalites paid on oil passing through the Lebanon to the Mediterranean coast. No agreement could be reached, however, and the talks were broken off in January 1936, an event which fed Iraq to offer her mediation in the dispute. The Iras Petroleum Co stated that, in the accuminates it might not be able to cannee ports A renewed offer at mediation came from Baghdad in April, but schwed no defective result. The Lebanon and passed, a faw imposing taxes, retro-precive to the beginning of 1932, on oil companies which operated pipelines through her territories Although the Lebanese Government expressed its readment to remum engolisations, the Iraq Petroleum is the second of the Companies of

THE EISENHOWER DOCTRINE

A state of emergency was declared in the Lebanon during the Sman Suez crisis at the end of October 1956 The Chamber of Deputies announced its support of Egypt, but the Lebanon did not break off diplomatic relations with Great Britain and France In November there were disturbances, however, at Tripoli and Beirut against the attitude of the government. Reports issued at this time intimated that the Egyptian military attache at Beirnt had been implicated in the recent disorders. The "Eisen bower Doctrine", a new programme, made known in January 1957, of financial, economic and military and by the United States to those countries of the Middle East which were prepared to accept it, evoked a favourable response in Lebanese official circles. The Foreign Minister of the Lebanon declared that the government was willing to collaborate closely with the USA in the implementation of the programme Daring the visit to Beirut in March of Mr. Richards, special adviser to President Essenhower on Middle Eastern affairs, it was announced that the Lebanou would co-operate with the United States in the task of opposing the growth of Communist Influence in the area and would receive, under the new programme, assistance to the amount of some 20 million dollars. The United States was also to help in the strengthening of the Lebanese armed forces Some of the political groups in the Lebanon protested against this pro Western alignment, asserting that it could not fail to isolate the Lebanon from the other Arab states and thus impair Arab solidarity None the less, in April, the government obtained from the Chamber of Deputies a vote of confidence in its policies

The problem of electoral reform had been under consideration in the Lebanon in the course of 1956. The main proposal now to be given effect was that the number of seatisf in the Chamber of Departies should be arised from 41 to 56. As election time drew near in the summer of 1957, rids occurred at Bernt, the government being compelled to call out troops for the maintenance of order According to reports current at this time more than one hundred.

Communists were arrested for their share in the disturbances. The tense electoral campaign of June 1957 was fought out between two blocs, the one supporting the government, the other opposing it in the form of a United National Front. When the election results were made known, it became clear that the government had won a marked triumph. A first provisional estimate suggested that it might count on the adherence of some three-quarters of the deputies in the new Chamber. Of the sumtotal of 66 seats the Maronites now received 20, the Sumi Muslims 14, the Shi'i Muslims 12, the Greek Orthodox Christians 7, the Druses 4, the Greek Catholics 4, the Orthodox Armenians 3, the Armenian Catholics 1 and the other religious minorities (Protestants, Jews, etc.) also 1 seat.

It was announced in July 1957 that the Lebanon would receive from the United States, under the Eisenhower Doctrine, economic and military aid to the value of approximately 15 million dollars in the course of the fiscal year 1958. Military equipment granted under the Doctrine had in fact begun to reach Beirut in June 1957. The Lebanese Government reiterated in August 1957 its firm desire to continue co-operation with the United States. In October, the King of Saudi Arabia and, in December, the Shah of Iran, visited Beirut, communiqués being issued, of which the first pledged Saudi Arabia and the Lebanon to support of the Arab cause, while the second gave assurances that both Iran and the Lebanon would work for peace in the Middle East.

There had been sharp disturbances in the Lebanon at the time of the elections held in June 1957. It became clear that unrest, especially amongst those elements of the population which opposed the pro-Western policies of the Lebanese Government and favoured an alignment with Egypt and Syria, was in no wisc dead, when further incidents (bomb outrages, assassinations) occurred in November 1957. The government, in its desire to halt these snbversive activities, now imposed a close control over all Palestine refugees in the Lebanon. Indeed, after renewed outbreaks of violence in December, the northern area of the Lebanon was declared to be a military sector. It was also announced in January 1958 that a national guard would be formed for the protection of important installations.

The Lebanese Government stated in March 1958 that it would not join the United Arab Republic (Egypt and Syria), the Arab Federation (Iraq and Jordan) or indeed any association which might limit its own independence and sovereignty. Large sections of the Muslim population, both in the north (at Tripoli) and in the south (at Tyre and Sidon), were inclined to be pro-Arab rather than pro-Lebanese in sentiment—a mood greatly stimulated by the emergence of the new United Arab Ropublic and by the propaganda emitted from Cairo and Damascus for the return to Syria of those predominantly Muslim areas which had been joined to the old Lebanon in the time of the French Mandate. There was conflict, too, between those who, although reluctant to see the Lebanon lose its separate political existence, were none the less strongly opposed to the pro-Western attitude of the Lebanese Government and those who, fearing the possible absorption of the Lebanon into the framework of a larger Arab state, felt themselves bound to support fully the policies of the Beirut régime. The danger was real that these complex tensions might explode in the form of a "confessional" conflict between Muslims and Christians, in which, if not the continued independence, than at least the entire political orientation of the Lebanon would be at stake.

THE CRISIS OF 1958

A reorganization of the government, carried out in March 1958 and designed to remove certain members who were critical of the pro-Western policies of the Lebanon and favoured closer co-operation with the United Arab Republic, brought no relief to the grave situation then developing. Serious disturbances, originating in Tripoli and the northern areas adjacent to the Syrian border, broke out in the second week of May and spread rapidly to Beirut and also to Tyre and Sidon in the southern Lebanon. The Druse population in the south-east was involved, too, in the disorders, being sharply divided into pro- and anti-government factions. Hostile demonstrations led to the destruction of the United States Information Service centres at Tripoli and Beirut. At the request of the Lebanese Government, the United States agreed to dispatch in all haste supplies of arms and police equipment and decided at the same time to reinforce the American 6th Fleet stationed in the Mediterranean. The U.S.S.R. now accused the United States of interference in Lebanese affairs and declared that Western intervention might have grave consequences. The Lebanese Government itself charged the United Arab Republic with interference in its internal affairs and appealed for redress to the Arab League which, meeting at Benghazi in June, failed to agree on a course of action. The problem was now brought before the United Nations which resolved to send an Observer Corps to the Lebanon. The Secretary General of U.N.O., Dr. Hammarskjöld, also visited the Middle East, conferring both with leaders in the Lebanon and with President Nasser at Cairo.

The Lebanese Government was now, in fact, confronted with a widespread insurrection, in which the Muslim elements in the population were ranged against the Christian elements. The forces opposed to the existing régime controlled parts of Beirut, Tripoli and Sidon, as well as large areas in the north and the south of the Lebanon. Attempts to negotiate a settlement led to no favourable result. The Prime Minister, Sami al-Sulh, gave an assurance that President Chamoun did not intend to ask for a constitutional amendment which would enable him to seck re-election to his office in September 1958, the date when his present tenure of it was due to end. To this assurance the leaders of the insurrection replied with a firm demand for the immediate resignation of the President, who made it clear, however, that he would not relinquish his office until September.

On July 14th—the date of the coup d'etat which led to a change of régime in Iraq-President Chamoun requested the United States to send American troops into the Lebanon with a view to the maintenance of security and the preservation of Lebanese independence. By July 20th, some 10,000 men of the United States forces were stationed in and around Beirut. Meanwhile, Mr. Robert Murphy of the American State Department had come to the Lebanon with the aim of discussing the situation with leaders of both sides in the conflict. The United States also made it known that action on the part of forces under the control on the United Arab Republic against American troops in the Lebanon might lead to most serious consequences. At this juncture, the U.S.S.R. and the Chinese People's Republic made strong protests against the American intervention and asked for the prompt withdrawal of the United States forces landed in the Lebanon. In August 1958, the General Assembly of the United Nations met to discuss the problem. On August 18th, the United States gave a written undertaking to withdraw its troops, either at the request of the Lebanese Government, or in the event that the United Nations took appropriate measures to ensure the integrity and peace of the country. The General Assembly thercupon adopted a resolution, framed by its Arab members, which provided for the evacuation of American troops under the auspices of the United Nations and of the Arab League.

PRESIDENT CHEHAB, 1958-64

Meanwhile, the Lebanese Chamber of Deputies had, on July 31st elected as the new President of State General Fuad Chehab the Commander in Chief of the Lebanese Anny—a choice supported by members from hoth sides involved in the internal condict. He assumed office September 23rd, in succession to President Chattonia and at once invited Rashid Karism in President Chattonia and at once invited Rashid Karism in the control of the analysis of the control of the control of the analysis of the control of the analysis of the control of the lates forces were to leave the Lebanon by the end of October

It seemed for a time, however, that a new period of violence was about to begin There was much resentment amongst the Christian elements of the population and above all, the adherents of the former regume, that General Chehab should have chosen one of the most notable leaders in the insurrection as Prime Minister On September 25th the National Liberal, Falangest and National Bloc parties formed around ex President Chamoun a united opposition, with a view to refusing the new government a vote of confidence. At the end of September and in the beginning of October, spasmodic clashes occurred at Beirut and Tripoli The danger of a fresh conflict with the roles of the former opponents now reversed, was in the end avoided through the formation, on October 13th, of a new Cabinet representing in equal proportions the two sides in the recent conflict. Of the four ministers who constituted this Cabinet, two were Muslim and two were Christian On October 17th the Chamber of Deputies gave a vote of confidence to the Prime Minister, Rashid Karami, and the three other members of the Cabinet

On January 14th 1859 the Lebanon gave official recognition to the "Provisional Algerian Government" located in Caro, An inter Arab conference, beld at Damas-us and attended by delegates from the Lebanon, Jordan, the United Arab Republic and Saudi Arabia came to an entire production of the Caroline Caroline and the Caroline Ca

In October 1959 the Lebaness Cabinet was roccased from four to rejat members, so that greater representation might be given to the various political groups. The Chamber of Deputers approved in 4 pril 1950 an Electorial Reform Bill, which imposed for the first time the principal Reform Bill, which imposed for the first time the principal Reform Bill, which imposed for the first time the resulting that the Chamber and the Chamber and the Chamber and the Chamber and the Chamber and the Reform the Chamber was dissolved by the Reformed to the Lebanom on May 4th, 1956, the Principal Chamber and the Reformed Chamber and the Reformed Chamber and May 1850 and 1

The election took place in an atmosphere of complete sidin, starts exentify measure being enforced throughout the various stages of the electoral process. In the new Camber of Deputes there were 30 Maronite Christians, 20 Sann Muslims, 10 Shri Muslims 11 Greek Orthodox Cambians 6 Genek Catholics 6 Drisses, 4 Armenian and the Carlo Cambians of Genek Catholics 6 Drisses, 4 Armenian and it member represent the common Catholic, 1 Protestant and it member represent the common catholic figure number of the 'rebe! personalities promotest at Jacques 10,95 and intherio not seated in the Chamber were now returned as members of the Deputies who had formed the

previous Chamber 31 (out of 66) retained their seats. Some of the traditional 'feudal' notabilities also recovered their places in the Chamber.

President Chehab announced on July 20th 1960, that he intended to resign his office. He was persuaded, however, to reverse his decision A new government, under the leadership of Mr Saib Salam, took the oath of office on August 2nd, 1960 The Cabinet which included several personalities active on one side or the other in the troubles of 1958, was prompt to re-affirm the traditional policies of the Lebanon in the field of economic affairs-policies of non-expropriation, of minimal government intervention in private enterprise, of encouragement for private investment both foreign and domestic, and of currency convertibility Economic trends during 1960 revealed that the Lebanon had recovered almost completely from the effect of the disturbances in 1958. One adverse development of considerable importance involved the Litani River project, work on which, begun in 1959, came to a standstill as a result of major technical difficulties A French firm was invited in December 1060 to re-examine the Litani scheme, to analyse the existing situation and to prepare a plan of future action

The Lehanon, during 1661, had to face complaints from the United Arab Republis to the effect that some of the numerous exists who had field from Syria, between 1949 and 1953, to find refuge in the Lebanon were sharing, as volunteers and as mercenaries, in guerilla and sabotage attacks emanating from Jordan against Syria—the tension between these two states during the first three months of the year was indeed rather acute The UAR made a number of sharp protests against this exploitation of the Syrian exists living in the Lebanon To the Lebanose government, ever inclined to remain neutral in the face of inter-Arab disputes and annuous to ensure normal relations much acute the support of the states of the Lebanose of the Lebanose government, ever inclined to remain neutral in the face of inter-Arab disputes and annuous to ensure normal relations for the Arabanose of the Lebanose, with President Nasser of the UAR, at Damascus on March 5th, 1961, nelped to ease the animesture of the Person, with President Nasser of the UAR, at Damascus on March 5th, 1961, nelped to ease the animesture of the Person of the production prounds.

CABINET REFORM

It had come to be felt, since Angust 1950, that the Lebanese Calment, 18 members strong was too large for the maintenance of an efficient administration. Internal dissension, having weakened the Calmet for some time past, brought about a crisis leading to the resignation of six ministers on May 9-clot, 1967. On May rand the Prime Minister established a new Cabmet consisting of expensional content of a dispute of the content of the conten

Military elements, acting in conjunction with curvane described as supporting of the extrement National Social Party, made an unsuccessful attempt, on December 31st 1907, too workflow the Lebaness government. The National Social Party was in fact the old Parti Populaire Syrien Kounded in the 1920s by Antone Saadé with the aim of bounded in the 1920s by Antone Saadé with the aim of the party facil dissolved by the Lebaness government on January 1st, 1962. The robels, failing in their purpose, fled towards the Mein region in the hope of finding assistance that the National Social Party having enjoyed considerable Libe National Social Party having enjoyed considerable and support of the National Social Party having enjoyed considerable and support of the National Social Party having enjoyed considerable and support of the National Social Party having enjoyed considerable and support of the National Social Party having enjoyed considerable and the Sat days of January 1962. By January 10th, the

rcbellion was over save for a few remnants of rebel resistance still to be found in the Akkar and Hermel mountains.

EXTERNAL AGREEMENTS

In February 1962 the Lebanese Government entered into an agreement with the Tunisian Government envisaging co-operation between the two states in the fields of educational, cultural and technical assistance. During the course of April, May and June 1962 the Lebanon also concluded a number of agreements with the United Arab Republic, i.e. with Egypt—agreements for the exchange of programmes and for technical co-operation in the field of television, for the import into Egypt of Lebanese-grown fruits, and for various adjustments in the current trade and payments system existing between the two countries.

The dispute, now six years old, over payments connected with the pipelines passing oil through the Lebanon to the Mediterranean coast was at last brought to an end. At Beirut in August 1962 a settlement was made between the Lebanese Government and the Trans-Arabian Pipclinc Company (Tapline), an American organization. In return for facilities relating to the transit of oil, to the loading of the oil and to the security of the pipelines the Lebanon was to receive about \$4,500,000 (as against \$1,250,000 under earlier agreements). The new and higher rate of payment included a sum of \$500,000 in lieu of supplies of oil at reduced prices which Tapline had undertaken to make available to the national oil refineries in Syria and Jordanthe Lebanon itself does not possess such oil refineries. Tapline also promised to pay the sum of \$12,500,000 in settlement of all past claims made by the Lebanese Government. Of this latter amount \$865,000, together with a portion of the new payments to be made to the Lebanon in respect of facilities for the loading of oil would be withheld until the full implications of a former agreement between the Lebanon and Syria had been made clear, such agreement having envisaged that whatever advantage the Lebanon might obtain in its relations with Tapline should be shared with Syria.

In the second half of 1962, the Lebanese Government made commercial and economic agreements with several of the newly established states in Africa. A joint communiqué issued at Beirut of October 6th, 1962, after talks between representatives of the Lebanon and the Niger, pointed towards a trade and cultural agreement. On October 19th the Lcbanese government entered into a most-favourednation trade agreement with Cameroon. The Lebanon also signed a technical agreement, under the terms of which it would provide the Cameroon with industrial and agricultural experts. A cultural accord was negotiated at the same time between the two states. After discussions held at Beirut on November 21st-27th, 1962, the Lebanese government concluded agreements for technical, commercial and cultural co-operation with Guinea, measures being taken to provide vocational training and also scholarships for Guinea students in the Lebanon. On May 2nd-13th, 1963, a conference of Lebanese diplomats in Africa was held at Dakar. A number of questions was discussed at the conference, amongst them the emigration of Arab nationals to the African states, the attainment of fuller economic co-operation with the new governments in Africa, and the creation of Lebanese cultural centres (with libraries) in the main African capitals. The Lebanon also negotiated with Senegal, May, 1963, an agreement for the fostering of commercial, economic and financial co-operation between the two countries. In December, 1962, the Lebanese government concluded with the United Nations Special Fund and the UN Food and Agriculture Organization a convention relating to a five-year development plan for the mountainous areas of the Lebanon.

During the course of 1963 the government negotiated new economic and commercial agreements with Poland (April), the German Federal Republic (May), Sweden (October), and the U.S.S.R. (November). Syria and Lebanon agreed in September to case restrictions in travel, employment, trade and finance between their respective territories and also reached an understanding in regard to their protracted dispute over the sharing of oil-transit dues. A brief period of sharp tension ensued, however, during the second half of October, as the result of a frontier clash between Syrian and Lebanese troops, which led to the death of several Lebanese soldiers. Syrian and Lebanese delegations met in January, 1964, to discuss questions relating to their common frontier and in particular the delimitation of certain areas hitherto not clearly demarcated.

On February 19th, 1964, the Cabinet led by M. Rashid Karami (which had held office for the last two years) resigned, after President Chehab had signed a decree dissolving the Chamber of Deputies (elected in 1960) and ordering elections to be held on four successive Sundays from April 5th, 1964 to May 3rd, 1964. A caretaker cabinet was appointed to supervise the elections for the new Chamber of Deputies.

PRESIDENT HELOU

General Chehab, whose term of office (6 years) as President of the Republic was due to end in September 1964, rejected all appeals that he should submit himself as a candidate for a second time. Even when the Chamber of Deputies passed a motion in favour of an amendment to the Constitution which would enable him to stand for a further term of office, General Chehab persisted (June 3rd, 1964) in his refusal. On August 18th, 1964, M. Charles Helou, Minister of Education in the caretaker administration, succeeded General Chehab as President. M. Helou pledged himself to follow the policies and reforms introduced under General Chehab.

On September 25th, 1964, M. Hussein Oweini, the Head of the caretaker Cabinet in office since February of that year, formed an administration at the request of President Helou. The new administration aroused dissatisfaction, however, in the Chamber of Deputies, since, deriving from the Cabinet appointed originally to act as a caretaker during the period of the 1964 elections, it was in fact composed wholly of non-members of the Chamber Having resigned on November 13th, 1964, M. Oweini now, on November 18th, 1964, gathered together a new Cabinet which, save for himself and the Foreign Minister, consisted of members drawn from the Chamber of Deputies and reflected in itself all the main trends of opinion within the Chamber.

FOREIGN RELATIONS

On July 20th, 1965, the Prime Minister, Mr. Hussein Oweini, resigned. There had been much debate in the Chamber of Deputies about a proposed agreement to guarantee private American investment in the Lebanon against expropriation, war or revolution—an agreement construed in some political circles as giving to the United States a possible excuse for intervention, at need, in Lebanese affairs. Acrid discussion had also occurred in the Chamber over bills intended to bring about reforms in the judicial system and in the civil service. On July 26th, M. Rashid Karami became the new Prime Minister, with nine Cabinet Ministers to assist him, all chosen from outside the Chambers of Deputies.

There was friction during the first months of 1965 between Federal Germany and the Arab States because of the decision by Bonn to enter into formal diplomatic relations with Israel. Anti-German demonstrations occurred

at Tripoli and Beirut and on May 13th 1965 the Lebanon broke off diplomatic relations with Federal Germany

In May 1965 Lehanon signed an agreement on trade and technical co-peration with the European Economic Community (EEC), which provided for mutual preference among the contracting parties, the creation of a joint committee to supervise EEC-Lehanon trade, technical assistant orders assistant to the EEC assistant to the EEC state also undertook to disseminate information about investment possibilities in the Lebanon in the Lebanon.

There was some Inction between Israel and the Lebanon over border medients during the summer and autumn of 1953 Members of the extremust Arab organization, al-fath carried out incursions into larnel at Yukah in June, at Ramin in August, and et Margaliot in Cerbine the last of these innoders they go the last of these innoders they of the Margaliot in Cerbine Covernment had taken measures earlier, however, and with success to limit the activities of al Fatah.

INTERNAL CHANGES

M. Rashul Karam, medified his colinet in December 195 and January 1906, these Langer artings from difficult user which haddered the full implementation of an administrative and judician leform programme, one of the main advocates of which was President Helon. A number of senior pages had to accept a forced critisment in December 1953 and a similar fate overfoot several ambasissions and senior displorates in Lanuary 1906. By the set of of March 1964 and a similar fate overfoot several ambasissions and a similar fate overfoot several ambasissions and a studied and a similar fate overfoot in the senior of March 1965 and a similar fate overfoot in the senior of March 1965 and the senior of office in government circles and to ensure efficient and honest diministration in invitably caused considerable tension. There was strong pressure in the Chamber of Deputies for a riturn to 8 achieves the chamber of the properties of the senior

Dr Yafi assembled a ten man Cabinet drawo entirely from the Chamber of Deputies with the exception of himsel and M. Philippe Task, the new Foreign Minister The constitution of the Cabinet represented a balance between the various religious interests and from the point of view of politics between the left wing and right wing elements in the Chamber of Deouties

In October 1966 the Intra Bank of the Lebanon was compelled to close its doors because of a run of withdrawals amounting to more than fix million in the preceding month The Lebanese Cabinet, on October 16th, met to discuss methods of ensuring that the hanks of the Lebanou had available adequate supplies of liquid cash. It also ordered all Lebanese banks to discontinue operations for a period of three days Later in the same month the Cabinet decided to place before Parliament a bill seeking special powers which would enable the government to take measures of safeguarding of the interests of small depositors at the Intra Bank. A crisis of confidence was a serious affair for a state where banking activities are of the highest importance The bill presented to the Parliament envisaged the establishment of en insurance company, jointly owned by the government and the banks, to guarantee small deposits A special commission would supervise the activities of the banks in the Lebanon A further result of that financial crisis was the the government resolved to discourage the creation of new commercial banks, foreign or Lebanese, for a period of five years Hitherto there had been an almost completo freedom to establish new banks in the Lebanon and there had been a large expansion of the banking system hased on the flow into the Lebanon of vast oil revenues from Saudi Arabia and from the states of the Persian Gulf

On December and the Frime Minister of the Lebanon, Dr Abdulha al-Vafi, offered the resignation of his government to Frendent Hefou Mr Rashid Karami formed a new administration on December 7th, 1966 It was composed of men drawn from outside Parliament, six of whom held ministernal posts for the first time

In April 1967 the Lebanon obtained an increase of more than 50 per cent in the royalites which it received from the Iraq Petroleom Company for the transit and loading of Iraq of These royalites have now risen from about £1,350 one to about £2,100 one per annum

In June 1967 the Lebanese Government aligned itself with the Aris state; then engaged in war against Israel On June 8th the government asked the Ambassadors of Britans and the USA to leave the Lebanop. Pro-Egyptian demonstrations at Berrit in Jone caused some damage to British and American properties there Some trouble was also reported from Tripoli, where a West Cerman cultural centre was subjected to estack. However, the months following the war wrinessed a gradual eauing of the tensions arising out of the conflict, and in September 1967 the Lebanese Cabinet agreed to reinstate its simbassadors in Washington and London

EVENTS 1968-69

M Rashid Karami's Calante resigned from offee in February 1055 Fresident Helou then asked Dr Addallah al-Yafi to form an interim administration, whose main task was to be the preparation and conduct of the general election in March 1063. The two most successful parties in the Chamber of Deputies elected were the Marontes dominated Triple aliance of a right wing complexion, and preponderence of votes rests, however, with deputies not yet committed to either of the two main parties. Dr. Yafi's interim administration remanded in office.

In May 1963 there was conflict between Lehanese and Israell forces in the region of Huleb—the first incident of this Lind on the Lebanon-Israel frontier for well over two years.

1968-69 was a year of exceptional political instability in the Lekanon. Dr. Al-Varif government rengined an October, owing to bitter trivaley between the two many political groups, the 'Chanomist' and the 'Cheabhist' or 'Cheabhist' or Cheabhist' of the Cheabhist' of the Cheabhist' of the Chanomist' and the Cheabhist's owner of the Chanomist' of the Cha

On December 26th an Israeli artiner was machine-guined by Arab guernlas et Athens aurori, causing two casualties (one fatal). Two days later Israeli commandos raided Befurt aurorit and elestroyed thriten aurorit, all belomping to Lebanese lines, care was taken to avoid any loss of life Israel said the raid should be seen as a reprisal for the Athens attack, a warning to the Arab world not to Lebanese to probe the fett, and a further warning to the Lebanes to probe the fett, and a further warning to the Lebanes to probe the fett, and a further warning to the Lebanes are relatively for the financial cost to the Lebanes was relatively small set mot aurorial two insured abroad. The major alter-effects of the raid were, firstly, the widespread cruticism it attacked even from countries

normally favourable to Israel. The Lebanon was seen as a country which had taken little active part in the campaign against Israel, while the fedayeen within it were only enjoying the freedom available to them in Lebanon's open, tolerant society. The UN Security Council unanimously condemned Israel for the raid. The second effect was the fall of the government on January 7th, 1969, its alleged lack of preparedness for Israeli aggression being the final blow to bring down a weak administration. After much political manoeuvring, a new ministry was formed on January 20th headed by Mr. Rashid Karami, Prime Minister for the seventh time.

This government was immediately confronted with the basic problems underlying the Lebanese situation. Foremost amongst these is the Christian-Muslim balance; in theory both religions are equally represented in the Lebanon, but no census has been held since 1939 mainly because the authorities fear that the balance has shifted to a 60 per cent Muslim predominance, which would seriously affect the political situation. The Christian community has a disproportionate share of the wealth and important positions and is the mainstay of the modest armed forces; it is generally conservative by Arab standards and takes a moderate position on the Israel question. The less privileged Arab majority is more in favour of both domestic reform (Lebanon has, for example, only the beginnings of a welfare state) and of a more militant position towards Israel. Early in 1969 numbers of Syrian guerrillas entered the country and apparently spent as much time in action against the Lebanese army as against Israel. Unrest also appeared amongst the 260,000 Palestinian refugees in the Sidon camp; part of the frontier with Syria was eventually closed. Numerous strikes and demonstrations continued. The Karami government felt unable to maintain the necessary coalition from the two communities and their various factions and resigned on April 25th, but it continued to function as a caretaker administration as no stronger government could be formed.

CONFRONTATION WITH THE GUERRILLAS

In the late summer of 1969 a number of guerrilla groups were reported to have moved to new bases better sited for attacks on Israel, which continued to raid these bases in reprisal; the combination of these factors created some friction between the guerrillas and the Lebanese army. In October the army apparently attacked some of these camps in an attempt to restrict or direct their activities. This triggered off a crisis that continued through the second half of October and threatened to develop into a full-scale civil war. The caretaker government resigned, claiming that it had not authorized the army's actions, and the President and the armed forces administered the country directly. Radical elements and guerrillas took over Tripoli, the second largest city, for several days, and most of the Palestinian refugee camps became fully converted into military training and equipment centres. Militant support for the guerrillas was voiced throughout the Arab world, and there were threats of military intervention by Syria and Iraq. Despite the tension, no extensive fighting occurred and there were few deaths.

On November 2nd the Lebanese Commander-in-Chief and Yassir Arafat, the leader of Al Fatah, signed a cease. fire agreement in Cairo. This limited the guerrilla freedom of movement to certain areas; as further defined in January 1970, it also provided that camps had to be set up some distance from towns, that military training must cease in refugee camps, and that guerrillas must enter Israel before starting to shoot. The intention was not to prevent guerrilla attacks, but to stop innocent Lebanese getting hurt, or their property being damaged, by Israeli counter-attacks. The calmer atmosphere that followed the cease-fire enabled Mr. Karami to form another cabinet towards the end of November. There was much concern about the weakness of the country's southern defences. and in January 1970 the new ministry felt strong enough to fire the Commander-in-Chief, appointing instead Brigadier Jean Njeim. In March there was a series of street battles in the Beirut area between the Palestinian guerrillas and militant right wing Falangist groups, but the government and the army managed to avoid becoming involved. In May Israel launched a major air and ground attack on guerrilla positions in southern Lebanon, a substantial area being occupied for nearly two days, Syria sent air assistance for the small Lebanese air force. The result of the raid was as usual disputed. Throughout the remainder of 1970 and during 1971 the Israelis continued to launch periodic attacks against guerrilla bases in the Lebanon, and the Lebanese continued to lodge their complaints with the UN Security Council, as in January 1971, when the Israelis struck deep into Lebanese territory. Friction also continued between the guerrillas and the Lebanese authorities. This was heightened by pressure on the government, culminating in a demonstration in Beirut in August 1970, by villagers from the south who wanted more protection in the clashes between Israeli and Palestine liberation forces. A further factor was the internal differences among the guerrillas which led to several armed clashes. In the first part of 1971 the government arrested 150 members of the Popular Front for the Liberation of Palestine (P.F.L.P.).

The election of Sulaiman Franjiya as President in August 1970 and the formation of a new cabinet, by Saeb Salam, from outside Parliament in October changed noticeably little. The ban on extremist parties (the Lebanese Communist Party, Parti Populaire Syrien, pro-Iraq Baath Party, etc.) was rescinded in October. Censorship of press, radio and television was also lifted in October, but was reimposed on television in the following April. Relations with Iraq were strengthened, necessitating consultations with Syria, whose Baath Party is at loggerheads with its Syrian counterpart. The spring of 1971 brought evidence of domestic unrest. On top of the activities of the Palestine commandos, there was fighting between the Falangists and the Parti Populaire Syrien, extensive student strikes and widespread dissatisfaction, especially in Tripoli, with the high unemployment rate and cost of living. Extensive security measures were taken for the visit in May of American Secretary of State, William Rogers, in order that Beirut should present as calm an appearance as possible. v.J.P.

ECONOMIC SURVEY

The area of the Lebanon is 10 400 square kilometres which is rather smaller than the combined area of Devon and Somerset and less than half the size of the state of Massachusetts Before she obtained her independence after the war the Lebanon formed a part with Syria of a much larger economic nuit that had already established siself After the two countries decided in March 1950 to dissolve the economic partnership by which they were bound together there were few who would have believed that the Lebanon, divorced as she was from the Syrian hinter land could survive as an economic unit. In the event not only did the Lehanon manage to survive but within a few years Belrut had made itself the commercial and financial capital of the Middle East

According to the estimate published by the monthly Bulletin of the Statistical Office of the United Nations the population of the Lebanon in 1969 was 2 645 000 almost equally divided between Muslims and Christians mainly of the Maronite sect but including substantial numbers of many other Christian persuasious Of the total population just over a third live in the four big towns of Beirut Tripoli Sidon and Zahle Exactly how many refugees from Palestine are living in the Lebanon is not certain, but it is significant that between 1947 and 1960 the population of the country increased by over a third. The natural rate of increase is believed to be in the region of 2 per cent per annum and this would not of course explain the heavy increase over the period

Of the total area of the country just over half (52 per cent) consists of mountain swamp or desert and a further 7 per cent of forest. Only 23 per cent of the area is culti-vated but there is a further 17 per cent which it is con adered could be cultivated given sultable conditions. The coastal strip enjoys a Mediterranean climate and is exceedingly fertile producing mainly olives citrus fruits and bananas but many of the steep valleys leading up from the coastal plain are carefully terraced and very productive in clives and soft fruit especially mulbernes and in the Zahlé and Shtaura regions there are well known vines ands Cotton in particular and onions are grown in the hinter land of Tripoli The main cereal growing district, however is the Bekan the fertile valley between the Lebanou and the Anti Lebanou ranges. In the north of this valley is the source of the river Orontes The river Litani also flows southwards through the Bekaa before it turns west near Merjayonn to flow rute the Mediterranean just north of Tyre This valley is particularly fertile and cotton is now grown there with some success Throughout the country the size of the average holding is exceedingly small According to a survey carried out in 1953 by the United States Operations Mission out of a total unmber of agricultural holdings of well under 150 000 no less than 132 000 were of 25 acres or less and even so a small holding particularly in the mountains may be broken up into several fragments separated from each other by a considerable distance

AGRICULTURE

The country's principal grain crop is wheat, in which there has been a steady increase in yield since the end of the war Since 1948 the acreage sown to wheat has regularly been about 170 000 acres but the crop which during the years 1948-52 yielded about 50 000 tons a year increased gradually to 58 000 tons in 1959. In years of had harvests it has fallen to 40 000 tons but in good years such as 1963. or 1967 it has been about 70 000 tons falling again in 1968 to about 48 000 tons and in 1970 to 45 000 tons The only other important cereal crop is barley and here again the yield has mereased appreciably since the end of the war for while the area planted to this crop has remained stable at about 50 000 seres the crop has increased from an annual average of 25 000 tons in the years 1948-52 to "9 000 tons in 1955 Even now it rarely exceeds about 30 000 tons in 2 good year and in 1970 it was very small indeed Thus the country is far from being self supporting m cereals and grain and flour continue to constitute one of the most important items in the long list of the things which the Lebanon has to buy from abroad It is also in this respect especially that the Lebanon has suffered from the economic divorce which has separated her from Syria for in most years Syria has an exportable surplus of cercals

It is almost true to say that the Lebanon s production of fruit is more important to her economy than that of grain. In any event production has increased very substantially since the end of the war especially of eitrus fruit which has risen from an annual overage of 75 000 tons in the years 1948 52 to 225 000 tons in 1963-64 230 000 tons in 1964-65 and 227 000 tons in 1969 The Lebanon's produc tion of oranges was then about a fifth of that of Israel and about twice that of Cyprus The production of fresh grapes has flourished in recent years and in 1969 amounted to 77 000 tons That of figs smounts to about 15 000 tons a year but bananas constitute perhaps a more important cash crop production having increased from an annual average of 16 000 tons during the years 1948 52 to 29 000 tons in 1969 Much progress has recently been made in the production of sugar beet which now amounts to about 100 000 tons in a good year

Other important vegetable trops are potatoes, onions apples and pears and melons Cotton and tobacco also are grown The forests are well regulated but have been greatly thinned by the ravages of the goat as elsewhere in the area and the number of the famous codars of Lebanon has sadly diminished Stock raising is not so important in the Lebanon as elsewhere in the Middle East but Lebanese dairy produce is now of excellent quality and there were about 160 000 head of cattle in the Lebanon in 1969 Sersonal migration from winter to summer pastures in the mountains and vice versa continues to be one of the chief characteristics of stock raising in the Lebanon as elsewhere in the Middle East

INDUSTRY

So far as is known the mineral wealth of the Lebanon is not great Both iron and lignite were mined in the country in the early part of the century and there are deposits of bitumen near Hasbaya In spite of intensive prospecting no oil has yet been found in commercial quantities On the other hand the geographic position of the Lebanon is of great importance to the oil industry of the Middle East for the country is crossed by two highly important pipelines that from the Iraq Petroleum Com pany soil wells in Kirkuk to the Mediterranean at Tripoli and that from Aramco in Saudi Arahia to Sidon Tapline There are also two important refueres In 1962 the agreement between Tapline and the Lebanese Govern ment was revised and Tapline undertook to increase the annual payment made to the government for transit loading and security from about \$1 2 to about \$4 5 mill on and to pay \$12 5 mill on in settlement of all past claims by the government Shortly after the settlement of the dispute between Syria and the Iraq Petroleum Company. the company agreed in March 1967 to increase the dues paid to the Lebanese Government with retroactive effect to the beginning of 1966. The Lebanese Prime Minister said that as a result the government's income from the company for 1966 would be increased from \$3.8 million to \$5.9 million. The flow of oil through both pipelines was interrupted in 1967 and for various reasons Tapline was out of service temporarily in both 1969 and in 1970. Shortly after this line was brought into use again early in 1971, the Tapline company offered to increase the transit dues from \$4.5 million to about \$7.8 million a year.

Manufacturing industry has for many years been highly developed in the Lebanon when compared with other Middle Eastern states, and, according to an official survey there were in 1964 some 2,100 industrial establishments in the Lebanon employing about 40,000 people. This excludes the public utilities and the usual peasant handicraft industries, also those employed by concessionaire companies such as the Iraq Petroleum Company, which employs some 600 people. The reason for the apparently disproportionate development of manufacturing industries in the Lebanon is that they were mostly established to supply the Syrian market, as well as that of Lebanon, and the economic separation of the two countries in 1950 was therefore a severe blow to Lebanon's industry. Another handicap has been shortage of fuel and electric power. In spite of all this, Lebanon's industry has made a good deal of progress during the last few years. There are two oil refineries, one at Tripoli owned by the Iraq Petroleum Company, and the other at Zahrani owned by MEDRECO. (Mobil and Caltex), total production in 1970 being 1.9 million tons. In March 1971 the governments of the Lebanon and Saudi Arabia agreed to establish a third refinery in the Lebanon, which was to be installed by Petromin, a company owned by the Saudi Arabian Government.

With the exception of the oil companies, the largest employers are probably the food-processing industries, which include biscuit factories and sugar refineries, followed by the textile industries, which are well developed. Perhaps more important is the cement industry, which has recently made great strides, the average monthly production having increased from 21,900 tons in 1951 to over 110,000 tons in 1970, two large new plants having come into operation. Much has been done by the government to encourage the development of the country's manufactures. In 1954 new industrial concerns with a capital of more than £L 1 million were exempted from Lebanese income tax for six years, and a similar exemption was again enacted in 1967 covering investments in industry made after 1964. The government has also promoted the creation of an Agricultural, Industrial and Real Estate Bank to make loans to industry. To meet the difficulty caused by lack of power, generating capacity has been greatly increased and the production of electric power has increased from 147 million kWh. in 1952 to 1,139 million kWh. in 1969.

EXTERNAL TRADE

There has been an adverse balance of visible trade for many years, the ratio between the value of imports and of exports generally now being between four and five to one. Since the economic separation of Lebanon from Syria, there has been a remarkable expansion. The value of imports increased from £L 298.4 million in 1951 to £L 1,641 million in 1966 and that of exports from £L 89.7 million to £L 316 million. The June war of 1967 distorted the country's foreign trade, particularly imports, but the annual value of exports and imports has since then steadily increased, and preliminary figures for the value of

imports in 1940 were £L 1,806 million, and for that of exports £L 580 million. None of the figures quoted includes the highly important transit trade through the free port of Beirut to Syria, Jordan and Iraq. The value of this trade has amounted in good years to several times the value of domestic exports from the Lebanon, and it is, of course, an important source of gain to the country's economy.

The principal articles of export are fruit and vegetables, the trade in which has expanded greatly since the war, and the total value of Lebanon's exports of citrus fruit, bananas, apples, pears and fresh vegetables usually amounts to about a quarter of the total. Much of this is flown to the large communities working in the oilfields of the Persian Gulf. Among the other important exports are included wool, cotton and hides. Owing to the increase in cement production, there is now an exportable surplus. The principal import consists of grain and flour. Large numbers of sheep and cattle also have to be imported, as well as a whole range of industrial raw materials, notably fuel and timber, and of course, machinery and manufactured goods of all descriptions.

In 1970, some 63 per cent of Lebanon's exports went to the Arab countries, about 20 per cent going to Saudi Arabia alone. The other main buyers of Lebanese goods in that year were the East European countries, the United States, the United Kingdom, Italy and France in that order, but the proportion of the country's exports taken by all these countries together was only 15 per cent. In the same year, 12 per cent of the Lebanon's imports came from Switzerland, and II per cent from the United Kingdom, with 10 per cent each coming from the United States, the Arab countries, and the countries of Eastern Europe. France and Germany each supplied a further 9 per cent, and Italy 7 per cent. However, these figures include imports of bullion and other precious metals, which may introduce some distortion. Early in 1971 the European Economic Community agreed to reduce customs duties on eertain industrial imports from the Lebanon by 55 per cent, and on certain agricultural goods by 40 per cent.

The heavy adverse balance of visible trade is generally made good by the large net invisible exports which the Lebanon's position as the chief entrepot and distributing centre of the Middle East has enabled her to earn, and by the remittances from the Lebanese overseas, of whom there are large numbers, especially in the United States, South America and South East Asia. The latest official balance of-payments figures published by the International Monetary Fund's Monthly Bulletin relate to the year 1965. There was then an adverse visible balance of trade amounting to U.S. \$349.0 million, but against this could be set the net earnings of the transit trade, \$58.3 million, the net income from tourists of \$58.2 million, and other current invisible items. These included emigrants' remittances mainly from Lebanese working abroad, and totalled \$118.6 million. The net deficit on current account was thus reduced to \$113.9 million, financed by imports of foreign capital.

CURRENCY AND FINANCE

As will have been seen, up-to-date and fully comparable series of statistics about the country's economic position are not available, and the central bank (see below) in its first reports referred to the continued inadequacy of Lebanese economic and financial statistics, particularly those relating to national income, public finance and foreign trade, which have since improved. But it is significant that gold and foreign exchange reserves, which amounted to U.S. \$232 million at the end of 1964, having steadily in-

creased to US 4925 million at the end of 1979 At the same time, the purchasing power of the currency has remained remarkably stable. The official cost of hiving index at Berut (1958-inc) stood at 81 for 1954, rose to 85 for 1955, and 90 for 1956, although apparently as 8 for 1956 and 90 for 1956, although apparently as 8 for 1956 and

The importance of Beirut as the commercial and financial centre of the Middle East increased remarkably in the 1950s and early 1950s. This was due maialy to the almost complete absence of restriction on the free movement of goods and capital, for the Lebanon is one of the few free markets left in the hiddle East. The Lebanon benefited as well from the growing zenophobia in Egypt particularly after 1951 Many foreign firms which till then had located the headquarters of their Middle Eastern activities in Cairo moved them to Beirut, where the compromise the Lebanese succeeded in working out between their own Muslim and Christan population evidently provided a more accommodating atmosphere for the Western European Moreover, large sums were being earned in the Gnif by Arabs who were seeking investment locally, especially in property, and for them Beirut was a convenient centre There were at one time over eighty officially recognized banks established in Beaut, including branches or representatives of very many major international banks. Among them are the British Bank of the Middle East, The Eastern Bank, the Moscow Narodny Bank, and several leading German and American banks Indeed one of the first tasks which the new central bank set itself was to establish some degree of control over the proliferation of banks, and to tighten regulations for the establishment of banks in the country Early in 1966 the government introduced new regulations governing the establishment of new banks (notably a minimum capital of fL 3 million) and subjected the opening of additional branches to the consent of the central bank

However, a sensors blow to considence an the banking system was the failure an October 1960 of the Intra Brank This concern was the largest purely Lebanese bank, its capital was mostly owned an the Lebanon, and it had many branches in the Middle Last and in New York and the man financial centres of Western Frappe The governdepositions; immediate steps to compensate the smallest depositions; immediate steps to compensate the smallest approved by the control of the 1967 that a scheme was approved by the control of the 1967 that as the Lebanon manage the banking business of the bank in the Lebanon and overseas, and another company was formed to take over the other asset, the shares being held as to 4x per cent by the Lebaness Government and individuals, 35 per cent by the Guswaits, 7 per cent by the Quarta and 13 per cent by the US Commodity Credit Corporation Creditors and depositors of more than 1£, 25,000 ceah reserved shares in the new company, and those of less than 1£, 25,000 reverved of per cent of the company of the company of the company of the company of the company of the company of the company of the company of the company of the 25 per company of the company of the 25 per company of the Commodity Credit Corporation to take over the assets of the bank During the years which followed the failure of the bank, the bank of the company o

TOURISM

The growth in importance of Beurst as a centre for air communications has been remarkable. A few years ago a new international airport was opened, which can accommodate the largest of modern autiners, and traffic has much increased. The number of passenger/kilometres handled at Bearut had by 1967 exceeded the figure for Egypt, the figure for cargo was nearly ten times bigger, and much of the traffic which formerly went via Egypt now passes through Beirut In addition the Lebanon has been successfully developed as the tourist centre of the Middle East, Many large modern botels have been built in recent years and the invisible income the country has earned from tonrism has been of great importance. The political troubles of 1958 brought something of a setback to the development of the Lebanon as a tourist centre, but hy 1961 the country seemed to have fully recovered its old position in this respect Between 1961 and 1966, the tourist business nearly doubled, the number of tourist nights increased from 763,000 in 1961 to 1,370,000 in 1966, and the estimated income from tourists increased from fL 147 to f L280 million But, many of these tourists used Berrat as a staging post for visiting Bethlehem and the old city of Jerusalem, which were then in Jordanian territory. Now that these places are in Israeli hands as a result of the 1967 war there was another severe, if temporary, setback to this growing industry. However, 1968 saw a recovery The total number of visitors was just under t 500 000, and the income from tourism is estimated to have been AL 360 million. The results for 1969 were almost as good. The number of tourists in that year was 1,362,000 including about 800 000 Syrians but the income derived from the tourist trade was slightly higher at L 383 million However, preliminary returns show that in 1970 the number of tourists visiting the Lehanon was about 13 per cent lower than in 1969

PUBLIC FINANCE AND DEVELOPMENT

During recent years, the nation's finances appear to have been on a sound basis, though budgetary expenditure has constantly increased owing largely to the rising cost of defence, which has generally accounted for about a fifth of the total expenditure. However, the revenue of the State, of which, as a tunual in the Middle East, a comparatively amail proportion is provided by direct taxation, increased million and NY Times in 1904 expenditure was \$L.25 and million and NY Times in 1904 expenditure was \$L.25 and had usen, according to the budget approved in their state of \$L.85 and million, an increase of nearly three times of the expenditure forecast for 1904 \$L.171 million was addicated for defence, or about 12 oper cent, \$L.132 million was to be typent on cituation, and \$L.105 million by the Simstry of Public Works and Transport. This was ex-

pected to leave a heavy deficit even after allowing for increases in income tax and certain customs duties.

Except in the refugee camps, where Arab expatriates from Palestine are maintained largely by UNRWA, the general standard of living in the Lebanon is higher than in most of the other Arab countries of the Middle East, and the national income showed a steady increase from £L 1,042 million in 1950 to £L 1,503 million in 1957. Largely because of the political disturbances of 1958 it fell to made available by IMF, the national income in 1969 was £L 4,112 million, compared with £L 2,861 million in 1964, though it is not clear whether these figures are comparable with those of earlier estimates. According to the same source, the economy's growth rate in 1969 was about 6.5 per cent, and the per capita national income had risen between 1964 and 1969 by about 20 per cent, amounting in the latter year to the equivalent of U.S. \$5,400.

The political pressure for development schemes to improve the standard of living was not for several years so marked as in the less developed countries of the area; at all events until 1961 Lebanon had no long-term plan for economic development such as there was in Syria or Iran. During the years 1965-69 the government intended to spend a total of £L 1,080 million on economic development, of which £L 155 million on roads, £L 123 million on irrigation, £L 72 million on agriculture and £L 49 million on education. The Lebanon accepted grants and long-term credits, principally for economic development and mainly from the United States, to the total of £L 887 million between 1945 and 1959. Moreover, it accepted Point IV aid from the United States. In 1965 a loan of KD 5 million was obtained from Kuwait for economic development.

There is in addition a large number of important development projects under active consideration, or in process of realization. Of these the most far-reaching is the Litani river scheme. Its object is to provide the country for the first time with an adequate supply of electricity and simultaneously to extend the acreage of irrigated land. The whole scheme will take about 25 years to complete, and it was originally estimated some years ago that it would probably cost about \$100 million, none

of which is provided for in the five-year plans. When finished it should have the effects of increasing the irrigated area of the Lebanon from about 120,000 to 170,000 acres. and of making possible the production of an additional 626 million kWh. of electricity per annum, compared with a production of 181 million kWh. for the whole country in 1954. The scheme should therefore entirely revolutionize the country's economy. Work began on the first stage of the project in which the combined output of the hydro-electric plant to be installed was to have been 336 million kWh. per annum. This phase of the operation was estimated to cost \$40 million, of which \$27 million was to be provided in the form of loan from the International Bank for Reconstruction and Development. By the end of 1967, the whole of this loan was taken up and \$4.7 million had been repaid. In July 1966 the Kuwait Arab Economic Development Fund agreed to make a loan of KD 3.4 million towards the financing of the second stage of the scheme There are numerous other smaller projects on which work is proceeding, notably the extension of port facilities at the harbour of Tripoli and Beirut.

Lacking mineral resources, unable to feed themselves out of their own agricultural production, and possessing no important raw materials, the inhabitants of the Lebanon. from the time of their Phoenician ancestors in the days of Tyre and Sidon, have been driven to trade and commerce to find a living. The abilities and traditions they have thereby developed over the centuries stood them in good stead when the new state of the Lebanon was forced by the rupture with Syria to stand or fall by its own efforts. Beirut has made a name for itself as an entrepot, as a centre of international commerce and finance, and as a sounding-board for what is going on throughout the Middle East, not only in the economic but also in the political field. This is surely proof that the severe handicaps which nature has imposed on the Lebanese people need not be fatal obstacles to rapid economic development, notwithstanding the serious setbacks they have suffered in recent years. Whether the constant guerrilla troubles on their southern and eastern borders will eventually disrupt the economy is of course another matter.

THE CONSTITUTION

The Constitution of the Lebanon was promolected on May 24th 1926 and was superseded on May 9th 1921. An amended Constitution was promitigated on the 24th ority of the French High Commissioner on January of the 1926 Constitution as Sheeted by the constitution of the 1926 Constitution as Sheeted by the constitution of the 1926 Constitution of the 1926 Constitution of the 1926 Constitution of the 1926 Constitution of the 1926 Constitution of the 1926 Constitution is still in force and further amendment were made on a cumber 9th and December 7th 1923 and again

on January 2181 1947

According to the Constitution the Republic of the Lebanon is an independent and 300 ereign State and no pair of the territory may be alienated to ceded Lebanon has no State religion. Arabic is the official language Bernet is the capital

All Lebauese are equal in the eyes of the law Personal freedom and freedom of the Press are guaranteed and protected. The religious communities are entitled to mutalization from a communities are entitled to mutalization from the product of the general requirements relating to public instruction as laid down the factor breakings are involved in which the other departments public and the product of the factor of the product of the factor of the product of the fragency of the product of the fragency of the product of the fragency of the product of the fragency of the product of the prod

Legislativa Power

Legislative power is exercised by one house the Chamber of Deputies if the asy on members who must be over 25, years of age in possession of their full political and evid mights and tierate. They are considered representatives of the whole nation and are not bound to follow directives from their constituences: They can only be suppended by a two-thirds majority of their follow members. Secrite Mallot was introduced in a new decition in word April 1500

The Chamber holds two essues yearly, from the first Tuesdaw siter Vlarch yigh in the end niklay and from the first Tuesday after October 19th to the end of the year The normal term of the Chamber of Deputsus 16 one years, general elections take place within sarry days before the end of this period. If the Chamber is dissolved before the end of this period. If the Chamber is dissolved before the end of this period. If the Chamber is dissolved the fore the one of the control of the Chamber is dissolved.

Voting in the Chamber is public—by acclamation, or by standing and sitting. A quorum of two-thirds and a majority vote is required for constitutional issue. The only exceptions to this occur when the Chamber becomes an electoral college and chooses the President of the Republic, of Secretairs to the Chamber, or what the President is accessed of treason or of violating the Constitution. In medical country is seen and a two-thirds majority is

Executive Power

The President of the Republic is elected for a term of ax years and is not immediately re-elligible. He and his ministers deal with the prombigation and execution of laws passed by the Chamber of Deputies. The finisters and the President of the Council of Ministers are chosen by the President of the Fepable. They are not necessarily members of the Chamber of Deputies although they are responsible to it and have necess to us debates.

The President binself can initiate laws Alternatively, the President may demand an additional debate on laws already passed by the Chamber. He can adjoin the Chamber for up to a month but not more than once in each sess on I nexteptional circumstances he can dissolve the Chamber and force an election. Ministers can be made to resign by a vote of no confidence.

THE GOVERNMENT

HEAD OF STATE

President of the Republic: Sulaiman Franjiya (elected August 1970).

JUDICIAL SYSTEM

Law and justice in the Lebauon are administered in accordance with the following codes which are based upon modern theories of civil and criminal legislation

(1) Code de la Propriété (1930) (2) Code des Obligations et des Contrats (1932)

(3) Code de Procédure Cavile (1933)

(4) Code de Commerce (1942)

(s) Code Maratama (1047)

(6) Code de Procédure Pénale (Code Ottoman Modifié)

(7) Code Pénal (1943)

(8) Code Pénal Militaire (1946) (o) Code d Instruction Crimmelle

The following courts are now established.

(a) Fifty six Single Judge Courts each consisting of a single judge and dealing in the first instance with both civil and criminal cases there are seventeen such courts at Bernt and seven at Tripoli

(b) Eleven Courts of Appeal each consisting of three ges including a Pres dent and a Public Prescritor and dealing with civil and criminal cases there are five such courts at Bearut

(c) Four Courts of Cassation three dealing with civil and commercial cases and the fourth with criminal cases A Court of Cassation to be properly constituted must have at least three judges one being the President and the other two Councillors The First Court consists of the First President of the Court of Cassation a President and two Councillors The other two civil courts each consist of a President and three Councillors If the Court of Cassation reverses the judgment of a lower court it does not refer the case back but retries it itself.

First President of the Court of Cassation Bapki Misouchi (d) The Council of State which deals with administrative ases It consists of a President Vice-President and four Councillors A Commissioner represents the Government

President of the Court of the Council of State Annu KHATE

(a) The Court of Justice which is a special court con sisting of a President and eight judges deals with matters affecting the security of the State

In addition to the above Islamic Christian and lewish religious courts deal with affairs of personal status (marriages deaths inheritances etc.)

There is also a Press Tribunal

RELIGION

PRINCIPAL COMMUNITIES

Maronites 424 000 Greek Orthodox 149 000 Greek Catholic 01 000 Sunni Muslim 286 000 Shi i Muslim 250 000 88 000 Druses

it will be seen that the largest single community in the Lebanon is the Maronite a Umate sect of the Roman Church The Maronites inhabited the old territory of Mount Lebanon, i.e immediately east of Beurut In the south towards the Israeli frontier Shi i villages are most common whilst between the Shii and the Maronites live the Druses [divided between the Yazbakis and the Jumblates) The Belian has many Greek Christians whilst the Tripoli area is mainly Sunni Muslim Altogether of all the regions of the Middle East the Lebanon probably

presents the closest juxtaposition of sects and peoples with in a small territory. As Lebanese political life is organized ou a sectarian basis the Maronites also enjoy much political influence including a predominant voice in the nomination of the President of the Republic

THE PRESS

With 96 newspapers, some 40 of them dailies, serving a readership drawn from a population of only two and a half million, the Lebanese Press is highly competitive. It is also relatively free from external controls, compared with most of the other Middle East countries. Freedom of the press, along with freedom of expression and association, is guaranteed, within the limits of the law, by article 13 of the Constitution. However, the legal limitations on the expression of opinion are somewhat restrictive, so that, for example, it is an offence to defame a foreign head of state, or print false reports about government policies. The basic press law is that of 1948, under which all papers and periodicals have to be licensed by the Ministry of the Interior. The licence can be withdrawn if a paper ceases publication temporarily within six months of its inception, or if circulation drops below 1,500 for thirty days. The editor must have a university qualification, and must deposit a security. The 1948 law also made journalists subject to the judgements of a tribunal of discipline. After a period of conflict between the Government and the Press, the existing law was revised by the press law of 1958, which abolished the procedure for detaining journalists pending investigations, and, with certain exceptions, made it possible for persons convicted of infringement of press regulations to lodge an appeal.

The multiplicity of newspapers in the Lebanon is to a large extent a reflection of the diversity of religious, political and linguistic minorities. The majority of the dailies are published in Arabic, but a few serve French and Armenian readers and one, The Daily Star. English readers in the Lebanon. The Daily Star and one of the Armenian papers both circulate throughout the Middle East. Most of the dailies, all except one of which are centred on Beirut, are small-circulation papers supported by various interested groups. The consequent fragmentation of the reading public, exacerbated by the existence of some 50 non-dailies of general interest and about 100 other periodicals, has its corollary in low advertising rates and financial insecurity. Although the Lebanon is the only Arab country where the Press is still exclusively in private hands, the independence of the majority of newspapers is circumscribed by the necessity for continued support from the various political or other groups, and for government patronage, whether through official advertising or some

other type of subsidy.

The most important dailies are Al-Hayat and An-Nahar, which have the highest circulations, The Daily Star, Al-Jaryda and L'Orient, the foremost French paper. The latter two are owned by Georges Naccache, former Lebanese ambassador to France, and tend to take a pro-government line. In a country where most of the élite speak French the other French dailies, Le Jour and Le Soir, are also influential, and, for the same reason, the twice-weekly publication Le Commerce du Levant occupies an important place in the periodical press.

The Lebanese Press has benefited indirectly from Beirut's status as by far the most important base for foreign correspondents covering the Middle East—by 1970 there were more than 120 of these. Long-distance communications have consequently been developed to a high standard.

FINANCE

cap =capital, p u =paid up dep =deposits m =million Lf=Lebanese f

Berrut has for long been the leading financial and commercial centre in the Middle East, as can be seen from the extensive list of banking organizations given below However, public confidence in the banking system was strained by the closing of the Intra Bank the largest domestic bank, late in 1966 when its liquid funds proved insufficient to cope with a run of withdrawals. The bank obtained enough guarantees to re open in January 1968 though it is now an investment bank managed by a New York company Before this crisis the government had passed a law stipulating a minimum capital of £1.3 million for all banks. This was followed in 1967 by a new law authorising a government take-over of a private bank facing difficulties threatening the interests and deposits of its clients all depositors are to be paid in full by the State This law was invoked in June 1968 when the Banque al Ahlı was taken over The new Bank Control Commission has taken over a number of small banks and assisted in the liquidation of several others. The major foreign owned banks now have a much larger proportion of deposits than before the Intra crisis and a number of the major American banks have acquired interests in Beirut

THEATRES

Baalbek Festival Modern Theatre Group: Baalbek; Dir. MOUNIR ABU-DEBS.

National Theatre: Beirut; Dir. NIZAR MIKATI.

EDUCATION

Until 1949 facilities for public education were provided only at the primary stage and they were considerably outnumbered by foreign and private institutions. Since the end of the French mandate in 1944, public education has greatly developed and now reaches all levels of instruction. However, private institutions still provide the main facilities for secondary and university education. Private schools enjoy almost complete autonomy except for a certain number which receive government financial aid and are supervised by the Ministry's inspectors.

The primary course lasts for five years and leads to the primary studies certificate examination. It is followed either by the seven-year secondary school, or by the four-year higher primary school. The baccalaureate examination is taken in two parts at the end of the sixth and seventh years of secondary education, and a public examination is taken at the end of the higher primary course. Technical education is provided mainly at the National School of Arts and Crafts, which offers three-year courses in building management, civil engineering, mechanics and industrial chemistry. There are also vocational schools for carpenters and electricians, and a domestic science college.

Higher education is provided by five universities, including the Lebanese University established by the government in 1953. In 1968-69 over 31,000 students attended Lebanese universities and higher education centres; about 80 per cent of these were male, but only

48 per cent were Lebanese citizens. Teacher training is given at various levels. A two-year course which follows the upper primary school trains primary school teachers and this can be followed by a further two-year course training teachers for the upper primary school. Secondary school teachers are trained at the Higher Teachers' College at the Lebanese University. A rural teacher-training school offers a five-year course for pupils holding the primary studies certificate and trains teachers for rural schools in villages having less than a thousand inhabitants.

For the year 1970 the budget of the Ministry of National Education amounted to £L123,600,000 or 16.7 per cent of state expenditure. Free primary education was introduced in 1960 and by 1966–67 there were altogether 1,850 primary, 487 higher primary and 220 secondary schools, containing over 500,000 pupils and some 25,000 teachers.

Libya

PHYSICAL AND SOCIAL GEOGRAPHY

Libya until recently three Federated States, is bounded on the north by the Mediterranean Sea, on the east by Engrie and the Sudan, on the south and south-west by Chad and Nigar, on the west by Algera, and on the north west by Tunsia. The three component areas of Lihya are Tirpoltama, in the west, with an area of 17.00 as miles, Cyrenaca in the east, area 350 000 sig miles, and the Fezzan in the south, area 25,000 ong miles, and the Fezzan in the south, area 25,000 ong miles, and the Fezzan in the south, area 25,000 ong miles, and the Fezzan in the south area 25,000 ong miles and the Fezzan had been and the Sudan and been ruled by a British administration, at first military, then civil, and the Fezzan had been administered by France The revolutionary government which came to prover in September 1956 has formally restanted the three regions.

PHYSICAL FEATURES

The whole of Libya may be aud to form part of the vast platen of North Africa, which extends from the Atlantic Osata to the Red Sea, but there are certain minor geographical features which give individuality to the three component areas of Libya. Tripolitania consists of a series of regions of different level, rising in the main towards the south, and thus broadly comparable with a flight of steps in the extreme north, along the Redisteriances coast, there is a low lying coustal plain called the Jefara. This is sue-ended unland by a line of hilly, or rapiter a scarper edge, that has several distinguishing local names, hot is usually a several distinguishing local names, hot is usually considered to the several distinguishing local names, hot is usually considered to the several distinguishing local names, hot is usually considered to the several distinguishing local names, and the several distinguishing local names, and the Jedes are the several distinguishing several distinguishing several names and the several distinguishing several distin

South of the Jebel there is an upland plateau—a dreary desert landscape of sand, scrib, and scattered irregular masses of stone. After several hundred males the plateau masses of stone After several hundred males the plateau where attenuang depressions make not her region of the Ferrary, which is merely a collection of oases on a fairly large scale, interspend with arress of desert in the extreme south the land rises considerably to form the mountains of the certain Subara where some peaks reach 1,200 ft. in height.

Oyrenarca has a nightly different physical pattern. In the north along the Reiderranean, there is an upland plateau that rust to 2,000 ft. in two very narrow steps, each only a that must to 2,000 ft. in two very narrow steps, each only a few miles wide. This gives a bold prominent consultine for much of Cyrenarca, and so there is a marked contrast with Traplitania where the coast is low lying, and in parts funged by laycons. The northern uplands of Cyrenarca racicled the Jebel Alchier (foren Miountain), and here, calculated the second that the step of the second that the low of the population and the two man town of the second that the second tha

the coast, 15 known as Marmanica, and its chief town 18 Tobruk

South of the jelel Akhdar the land falls in elevation, producing an extensive lowland, which except 16' its northern fringe, is mainly desert Here and there occur a few access—Analy (a royhig) also, and jagshubin the northern and jaw, Zaghen, and Kuira (the largest of all) in the yell and a series of all in the series of t

The climate of Libya is characterised chiefly by its aridity and by its wide alternation of temperature; Jacking grountain barners, the country is open to influence both from the Sharia and from the Mediterranean Sea, and as a result there can be abrupt transitions from one kind of weather to another in waiter, it can be fault; raw and cold in the north, with sleet and even light and one of the hilds in summer it is extremely but in this jess of the hilds in summer the settlemely hot in this jess of the hilds in summer the settlemely hot in this jess of the hilds in summer the settlemely hot in this jess of the hilds in summer the settlemely hot in this jess of the hilds in the southern deserts conditions are hotter will. Garlan once (incorrectly) claimed the world record in temperature, but figures of over 130°F are known Several feet of snor can also occur here in winter Northern Cyrenates has a marked by cooler summer of 80°-90°, but with high air humidity near the coast A spenil facture is the ghold—a hot, very dry wind from the south than can russe temperature. But the ports by 30° or even ay in a few hours, somewhat the ports by 30° or even ay in a few hours, somewhat can wind may blow at any season of the year, but alternating and autumn are the most usual seasons. Considerable damage is done to growing crops, and the effect even on human beings a being a side on market.

The hills of Tripolitania and Cyrenalca receive angually as much as 15 to 20 inches of ratifall, but in the remainder of the country the amount as 5 inches to riess A special difficulty is that once in every five or air years there is a pronounced drought, sometimes lasting for two nucessive seasons. Actual falls of rain can also be unreliable and erratic

ECONOMIC LIFE

Such conditions impose sever restriction on all forms of economic activity. Although ool has been found in considerable quantities in Libra physical and climatic conditions make explaination difficult, and the remote situation of the country, away from the currents of international trade, is a further handical. But production of crude oil a mercaning rapidly each year and in 1965, with the blickles of the base Canal giving the country a strong geographical of the base Canal giving the country as tong geographical control of the country of t

In the better watered areas of the Jafara, and to a smaller extent in northern Cyrenaica, there is cultivation of barley, wheat, olives, and Mediterranean fruit. Some of the best land in Tripolitania is still in the hands of Italian settlers, who are however now very few in numbers. Most land is occupied by Arabs, most of whom are sedentary. The rest engage in shifting cultivation with small plots that are given over to cereals and vegetables for a few years, and then abandoned for a time.

The Fezzan and the smaller oases in Cyrenaica are almost rainless, and cultivation depends entirely upon irrigation from wells. Millet is the chief crop, and there are several million date palms, which provide the bulk of the food. Small quantities of vegetables and fruit—figs, pomegranates, squashes, artichokes, and tubers—are produced from gardens. Along the northern coast, and especially on the lower slopes both of the Tripolitanian Jebel and the Jebel Akhdar, vines are widely grown, chiefly for winemaking. An edict imposing complete prohibition upon Libyan Muslims has, however, led to a restriction of production.

Over much of Libya pastoral nomadism, based on the rearing of sheep and goats, and some cattle and camels, is the only possible activity. In Cyrenaica nomads outnumber the rest of the population, and animal products account for 60 per cent of the total trade, but in Tripolitania main

emphasis is on agriculture, though herding is still important. The latter region also has a number of small local industries, whilst there are very few of these in Cyrenaica, and none in the Fezzan.

The original population of Libya seems to have been Berber in origin, i.e. connected with many of the present day inhabitants of Morocco, Algeria, and Tunis. The establishment of Greek colonies from about 650 B C. onwards seems to have had little ethnic effect on the population; but in the ninth and tenth centuries A.D. there were large-scale immigrations by Arabic-speaking tribes from the Najd of Arabia. This latter group, of relatively unmixed Mediterranean racial type, is now entirely dominant, ethnically speaking, especially in Cyrenaica, of which it has been said that no other part of the world (central Arabia alone excepted) is more thoroughly "Arab".

A few Berber elements do, however, survive, mainly in the south and west of Libya; whilst the long-continued traffic in Negro slaves (which came to an end less than thirty years ago) has left a visible influence on peoples more especially in the south but also to some extent in the north.

Arabic, brought in by the tenth century invaders, is now current as the one official language of Libya, but a few Berber-speaking villages remain, and English and Italian are understood by leading Libyans in the north.

HISTORY

In attempting to summarise the history of civilization in Libya, it is not easy to find and to cling to the thread which will take the historian out of the labyrinth of the local histories of small cities of the coast and give him a clear conspectus of the history of the country as a whole. Another science, geography, must lend a guiding hand. Where harbours and roadsteads exist in Libya, which have more or less fertile immediate hinterlands, and which are conveniently sited with respect to the northern ends of caravan routes trading from the interior of Africa, those peoples of the Mediterranean who have from time to time been active as seamen and traders, have established, or maintained "emporia"-small city colonies. These conditions have existed in Libya only at the west and the east ends of the bleak and forbidding Gulf of Sirte where the desert reaches to the sea and separates the modern provinces of Tripolitania and Cyrenaica by a vacuum 250 miles across. Where the desert is, there is nothing; where the semi-desert lies, and around the distant oases of the interior, there are the nomads and the semi-nomads, whose way of life appears to have changed little throughout the centuries and in whose history the main event has been their conversion to Islam. Poor and ignorant, but proud, fiercely individualistic, intolerant of all external controls, they seem perpetually to have resented the civilising influences from without which have clung to the two extremities of the Mediterranean coastline around Sabratha, Tripoli. Leptis at the west end, and ancient Cyrene, Barca, Berenice (now Benghazi) and Derna at the east. When the coastal cities have been in strong hands, their civilising influence has been pushed inland to the limits of cultivable land. When they have been in weak hands, their influence has stopped at their city gates, and the very sands of the desert have invaded what under stronger rulers of the cities bore crops of corn, olives and grapes.

This is the pattern which the student of Libyan history must bear in mind.

From the evidence of Herodotus, and also from that of

modern archaeological research, it appears that in the earliest historical times two races inhabited Libya—the "Libyans" and the "Ethiopians"—the former, of Mediterranean stock, inhabited the coastal areas; the latter, of negroid and African stock, inhabited the interior. They used neolithic stone instruments. They knew how to cultivate. The Garamantes of the Fezzan raised cattle over a thousand years before Christ, Phoenician sailors from the cities of Tyre and Sidon in Syria began to visit Libya to trade for gold and silver, ivory, apes, and peacocks. The perils of their voyages in little ships and the advantages of having emporia at or near the northern ends of the caravast routes led the Phoenicians eventually to establish permanent colonies on the coast, at Leptis, Uai'at (Tripoli) and Sabratha, where more or less safe roadsteads existed. Their most famous colony, Carthage, lay to the west of the boundary of what is now called Libya. But this city, in its maritime and commercial struggle with the ancient Greeks, extended its influence eastward and by 517 B.c. had incorporated the three cities into its Empire.

By this time the Greeks had colonised Cyrene (about 600 B.C.) and raised it to be a powerful city. The Carthaginians, sensitive to competition in Libya, not only drove off an attempt by the son of a Spartan King to found a colony near Leptis, but advanced to contact with Cyrene, where, some time about the beginning of the fourth century B.C., a firm frontier was established against the Cyrenaicans at the Mounds of Philainos, where Mussolini's "Marble Arch" now stands. Cyrene herself fell under the domination of Alexander the Great, and although he was never able to carry out his threat of marching against Carthage, Ptolemy I Soter, heir to Alexander's Egyptian conquests, conquered Cyrenaica for Egypt and extended his empire westwards as far as Sirte.

By about 250 B.C. Carthage was at the height of her power. Her monopolistic policy in commercial and foreign relations reduced the three "emporia" to political non-entity, although their agriculture flourished.

By this time the Romans had substituted themselves for the Greeks at the most powerful Europeans in the Mediter ranean Danng the struggle between Rome and Carthage which followed, the Tropolitanua half of Labys, tell into the power of the Numbrains under Massinass which, and the power of the Numbrain and the Massinass which are the structure of the Massinass which are the structure of the theory of the Numbrain and the Massinass which are the structure of the Numbrain and the Numbrain asserantly but in ever closer trading relationship with Italy, until Caesar was against Dompe, when, after his victory at Thappus over the Posinguans and then Numbrain alles, Caesar crasted the Roman proposed responsible to the Sante who filso commanded the Leppe III Augusta. Mean while Cyrenacas had passed under Roman soverentyl by the testament of the last of her Ptoleman Krogs—Ptolemy Apon—and was eventually created a province about 75

The Pax Romana extended itself during the first century after Christ from the Mediterranean to the Ferzan The second century was for Labya a period of prosperity, peace and erinhization, the like of which she has never seen again In particular under Septimus Severus, himself born in Leptus and the successors of his family, the cities, and escentily Leptus, attained the height of their splendour

This conducts did not last Decline had set in by the middle of this forth easiny The general eaconomic disease which was affecting Roman cavolastion affected also Aines. Crustiantly had challenged the spiritual values of the classical world but was itself too full of schums to provide unity and straught lidys itself was the scene of force interacense struggles caused by the Donatist heresy Barbarass Broke into the province, deveatating the country-side distroying its agricultural system, and spreading insecurity which caused depopulation through light to the towns in a D 431, Generic and his Vandals appeared, overant the country, best down the city walls, and brought ruin in their train. They were the first to introduce that so so Auundred yavas later the Emperor Justiana a general Balsarias found little difficulty in reconquenting the country of prosperity but continual rebellions by the Berber tribes soon reduced the country to anarchy

THE MUSLIM PERIOD

In this condition the first Arab layeders found, it In the Caliphate of Omar, Ara libn al-As, the conqueror of Egypt, overran the country as the Araba and Topoli, the walls of which total to a real to the country as the country as the country as the country as the country as the country as the country as the country as the country of the country as

Schurs and continual rebellion moluced the Caliph of Baghadd Harm ar-Rashid, to appoint, in a Pa 500, Ibrahim the all Aghlab as Governor with capital at Qurawan law for a graph of the Saphabd Quray, which became vertrally undependent of the Ahhand Caliph of Baghadd, but which the property little practice little practice little graph of Baghadds, but which the property of the Aghlabds and founded the Shirtle Faltimd Dynasty and Raghabds and founded the Shirtle Faltimd Dynasty in Aghlabds and founded the Shirtle Faltimd Dynasty in Aghlabds and founded the Shirtle Faltimd Dynasty in the Green of the Carron of AD 972, and made Bulukkin in Zan Governor of AD 972, and made Bulukkin in Zan Governor of AD 1974, and made support of the Shirtle Faltim Shirtle Shirtl

Sunnism and acknowledged the covereignty of the Calipb of Baghdad

The Fatund Calph of Egypt, Al Mustanur, reacted by sending agrainst Libys who nound Arab tribes which had been kept in Upper Egypt—the Banu Hilal and the Banu Salem (a D 149) Thai invasion was a final catastrophe for medieval Libya. The country was devastated, agriculture abandoned The fortified eties and in particular Tripolitic abandoned The fortified eties and in particular Tripolitic and the sending of the Arab and Berber races. Nor do the fourteent and fifteenth centures offer much more to record in 'Hengya' Murabit dynasts from Morocco contended with Miwabhid dynasts from the Baleane Islands From these struggles emerged a dynasty in Tinusia called the Hästisch whose power declared into a weak and anarchic state that adiacted city of Christian Spain which could not overlook the fact that the cities of the northern coast of Africa had become dense of prates

Erduand the Cathole sent an expedition under Cardinal Ximenes and Don Pietro of Navarre which took Oran Bugus, Alguers, and Tunis and them, in 1510, Tirpoli These conquests produced a profound impression on the Muslim world which at that time had become more united under the Ottoman Turks than it had been for sax hundred years, when the Abbasid Caliphs were at their zenith The people outside the either resisted the Spanish were exposed to the dangers of conspinery Moreover they could make the first to the dangers of conspinery Moreover they could make bittle effort to extend their power inshed since, after the accession of the Emperor Charles VI, Spanish accessing the Emperor Charles VI, Spanish Became Abraholi intrigued unsuccessifully with the corsair Khair ad-Din, known as Barbarosta, who had made hunsel Lord of Algeria and had later become the Admiral of the Ottoman Saltan

In these curvementances the Emperor Churles Y confided (A b 1530) the Lordship and the defence of Tripoli to the Knights Hospitallers of St. John (later to be known as the Knights Hospitallers of St. John (later to be known as the Knights Hospitallers of St. John (later to be known as the Ottomas Sultan, Sulsyman the Magniferent The Knights were able to maintain themselves there for only at years were able to maintain themselves there for only at years that the standard of the Church and the Church and the Church and the Knights or compulate the Knights or compulate to

The Ottoman rulers of Constantinople now proceeded to organise their North African possessions into three Regen cies-Algeria, Tunisia, and Tripoli the last including also Cyrenaica and the Fezzan-each under a Pasha But their organisation contained from the first the germs of the disease to which it ultimately succumbed The population of the interior was left almost unadministered. Tribute was levied and collected by a few regular troops, and by the "Maghzen" tribes from the remaining tribes, in return for the privilege of exemption from tithe and capitation tax The system gave obvious opportunities for oppression and rebellion and the division of the people into fendal lords and seris Worsestill was the hardening of the professional soldiery of the garrisons, the Janissaries, of slave origin, into a multary caste in which promotion was by seniority alone and the retired officers of which had the right to a seat in the Pasha's Divan, or Council, The Janussaries became a power within the state. No less dangerous was the infinence of the pirate captains—the corsairs. The Pashas subsidesed them with arms and equipment and took their recognised share of their prizes. The Captains' Guild, called at Ta'ria, also became a power within the State As early as AD 1595 the Divan was conceded by the Sultan the right of deciding foreign affairs and taxation At the beginning of the seventeenth century the Janussaries introduced

the custom of electing a "Dey" who sometimes reduced the Ottoman Pasha to a nonentity, sometimes shared with him the power, and sometimes was himself both Dey and Pasha. The history of the seventeenth and eighteenth centuries is one of intrigue, rebellion, sudden death, occasional outbreaks of pestilence, and of a country supported mainly by the depredations of the corsairs upon the merchant-fleets of Christian powers and the enslavement of their crews. In A.D. 1654 Admiral Blake was the first to bombard Tripoli in reprisal for such piracies. The great de Ruyter of Holland followed in 1669 and again in 1672.

In 1711 a local notable, Ahmed Karamanli, of Ottoman origin, and an officer of Janissaries, was proclaimed Dey. He succeeded not only in killing the former Dey and in defeating and killing the new Pasha sent from Constantinople, but also in persuading the Sultan Ahmed III to recognise him as Pasha. For the first time Libya had some sort of autonomous existence. The Karamanli dynasty lasted until 1835. Several of these rulers, and in particular the first and the last (Yusuf ibn Ali Karamanli, who was in power during the period of the Napoleonic wars) were men of strong personality, and capable statesmen who con-trolled the whole of Libya and improved the political and economic condition of the country. Like the former Pashas, they relied for much of their revenue on piracy. But the Karamanlis learned to make treaties with the maritime powers, bargaining with them to refrain from attacking their ships for a consideration, and for the most part restraining their Captains from breaking such treaties. When they failed to do so the powers would take strong action, as did the United States of America in 1805. The lesser powers naturally suffered most from the corsairs.

Such vast profits had the rulers of the Barbary coast made from piracy during the Napoleonic wars that the smaller powers made the abolition of piracy and of the enslavement of Christians points for discussion at the Congress of Vienna. England was entrusted with the suppression of these evils. It took ten years of naval and diplomatic action on the part of England and the Kingdom of the Two Sicilies to effect this. The suppression of piracy spelt the ruin of the Karamanlis. Yusuf Pasha fell into dire financial straits from which his expedients of adulterating the currency, of state trading, and of pledging in advance the already exorbitant taxes, so far from rescuing him served only to ruin both him and Libya. In 1830 French pressure compelled him to give up even the payments formerly exacted from Christian States for the right to maintain Consuls in Tripoli and for the right to unmolested navigation. In desperation, Yusuf demanded a special "aid" from both Jews and Muslims and this was the signal for

Probably through fear of the extension of French power in Algiers and Tunis, the Sultan decided to re-occupy Libya and to bring it once more under the direct rule of the Porte. This was in 1835. The rest of Libya's story in the nineteenth century is similar to that of most of the possessions of "The Sick Man of Europe"-corruption, oppression, revolts and their suppression—the towns alone being held by the Turks, with an occasional more energetic or more honest Governor. The period was, however, marked by the diffusion of the propaganda of the Sanusi Mystic Way from the fraternities, founded by Sayyid Muhammad Ali as-Sanusi in az-Zawia al-Baida and Jaghbub, through the south-west of Cyrenaica and amongst the nomads of Southern Tripolitania and the Fezzan. The existence among the coastal population of Tripolitania of strong fraternities of other sects, and especially of the Salamiya, accounts for the failure of the Sanusi Movement to spread there, a fact which perhaps had political effects at a later date during the resistance to the Italians.

ITALO-TURKISH CONFLICTS

On September 29th, 1911, Italy declared war on Turkey for causes more trivial than those which twenty-four years later led to her war with Ethiopia and her denunciation as an aggressor. After a short bombardment Italian troops landed at Tripoli on October 3rd. Italy knew the Turks to be involved in the Balkans, and knew, through her commercial infiltration of Libya, their weakness in Africa. But her attack on Libya was not the easy exercise she expected. The Turks withdrew inland. But the Libyans organised themselves and joined the Turks, to whom the Porte sent assistance in the form of arms and of two senior officers. Ali Fethi Bey and Enver Pasha. The presence in the Italian army of Eritrean troops was a spur to the pride of the Libyans. In October and November a number of actions were fought around Tripoli in which the Italians had little success. A seaborne Italian force then descended on Misurata and seized it, but could make no progress inland. At Ar-Rumeila they suffered a considerable reverse. Turkey, however, defeated in the Balkan War, was anxious for a peace, which was signed on October 18th, 1912. One of the conditions of this peace was that the Libyans should be allowed "administrative autonomy". This was never realised.

Peace with Turkey did not, however, mean for the Italians peace in Libya. Although most of the Tripolitanians submitted and were disarmed within two years. the Sanusiya of Cyrenaica under Sayyid Ahmad ash-Sharif. and their adherents in the Fezzan and Tripolitania refused to yield. The Sanusiya maintained a forward post at Sirte under Sayyid Safi ad-Din as-Sanusi. What contact there was between this Sayyid and one Ramadan as Sueihli of Misurata is obscure. Ramadan had been in the resistance to the Italians and two years later had appeared to be submissive. At all events, he found himself commanding Libyans in an action started by the Italians at Al-Qaradabia in 1914, to push back Sayyid Safi ad-Din. Ramadan and his Misuratis changed sides in this action to the discomfiture of the Italians. By the time that the First World War had started, the Italians held only the coast towns of Tripoli, Benghazi, Derna and Tobruk, and a few coast villages near Tripoli.

The First World War gave Turkey and her German allies the opportunity of fermenting trouble against Italy in Libya. Arms and munitions were sent by submarine. Nuri Pasha from Turkey and Abdurrahman Azzam (late Secretary-General of the Arab League) from Egypt joined Sayyid Ahmad ash-Sharif in Cyrenaica. Ramadan as-Sueihli became head of a government at Misurata. The Sultan, to prevent quarrels, sent as Amir Osman Fu'ad, grandson of Sultan Murad; and Ishaq Pasha as commander in chief in Tripolitania. The strategical objective of these efforts was to tie up Italian forces in Libya and British forces in the Western Desert. The climax of Nuri Pasha's efforts with the Sanusi was their disastrous action in the Western Desert against the British, as a result of which Sayyid Ahmad ash-Sharif handed over the leadership to Sayyid Muhammad Idris. He was compelled to make the treaty of az-Zawiatna with the British and the Italians who recognised him as Amir of the interior of Cyrenaica, provided he desisted from attacks on the coastal towns and on Egypt.

The end of the war in 1918 left Italy weak and the Libyans, deserted by the Turks, weary. The Tripolitanians attempted to form a republic with headquarters at Gharian and with Abdurrahman Azzam as adviser. The Italians made a truce with them at Suani ibn Adam, permitting a delegation to go to Rome and entertaining the idea of "administrative independence". Ramadan as-Sueihli visited Tripoli. In Cyrenaica, Sayyid Muhammad Idris as-

Samus hiewes attempted to come to terms in 1941 at Sarts the Tripultanan leaders agreed with him to join forces to obtain Lubya's rights and to do homage to him as Amn of all Lubya Meanwhie the delegation to Rome had returned empty handed and Ramadan as South had been shan in a tribal fight.

ITALIAN COLONISATION

The advent of the Fazzusis to power in Italy (1924) cost cated with the appointment in Tripoll of a vigorous Gower nor, Count Volpi. Thereafter, it took them until 1925 to occupy and pasify the province of Tripolitana and disastic the population. In Cyrenaecuse of Tripolitana and disastic the population and the state of the County of the Part of the Pa

Stating in the early 1920's, the Italians proceeded to colonise in the sense of that word which is now in disripute, these parts of Livya which they bad occupied, and which geographical and ecological conditions rendered profitable for development. They enlarted and embedded profitable for development. They enlarted and embedded profitable for development and embedded and embedded and they be the sense of the sense of the sense of the sense of the sense of the sense of their own race. The object was clearly the settlement in formation of the sense of the sense of the sense of their own race. The object was clearly the settlement in their cubing policy was suggested beauty in favour of their own race. The object was clearly the settlement in the sense of the sens

LIBYAN INDEPENDENCE

There followed the Second World War, and the occupy to un 1942 of Cyrenaca and Tripolitana by a British Military Administration and of the Ferzan by French Forces Therefier until 1950 the country was administrated with the greatest economy on a care and maintenance bases Is final fate was long in doubt, until the United Nations decreed its independence by 1952 On December 24th 1951. Libra was declared an undependent United Kingdom with a federal constitution under King Idras the former harm Mahammad Idras hero of the reastage

According to the Constitution promulgated in October 1951, the state of Labya was a federal menarchy ruled by King Muhammad Idns al Mahdi al-Samus and his hers', and davided into the three provinces of Tripolitania Operanica and the Fezza The Federal Covernment consisted of a br-cameral legislature, i.e. a Chamber of Deputes to which wastersponsible a Council of Ministers appoint

ed by the King and a Senate of 24 members 8 for each prowner The King had the right to nonmate half the total number of Senators, to introduce and to veto legalation and to dissolve the Lower House at his discretion. The Constitution also provided that Provincial Legalatures should be created for the subordinate provinces of

Since the attainment of full independence in December 1951 serious problems, political, financial and economic, have confronted Libva. Not the least of these is the task of fostering amongst the population a sense of national identity and unity The loyalties of the Muslim Arabs, amongst whom the traditional outlook and habits of the past are very strong are still given to the village and the tribe rather than the new federal state Poor communications and the great spaces of desert land together with a lack of the trained personnel indispensable for the estabbehment of a stable and efficient modern administration which shall itself be a visible embodiment of the ideal of service to the new state are obstacles to the development of a true national sentiment which will require long years of effort for their elimination. Provincial pivolpes are still. strong Cyrenaica, which embraces about one quarter of the total population, resisted Italian domination in the eriod 1911-37 at considerable cost to itself Since the Sanus religious order was the main force directing the population of nomads and semi-nomads against Italian population or makes an embruolinas against tumber rule, it was inevitable that in Cyrenaica not only feligious but also political loyalry should become focused on the family of the present King In Tripolitains, bowever, which contains sbont two-thirds of the total population, local loyalties were not concentrated in such a channel and there was a considerable degree of co-operation with the Italians Antipathies between these two provinces have had a marked infinence on the course of internal events sinca 1951

The first elections for the Federal Chamber of Deputies were beld on February 19th, 1952, 35 out of a total of 55 seats being allotted to Tripolitania 15 to Cyrenaica and 5 to the Ferran The Party of Independence which supported the Constitution obtained 46 of the 55 seats, but in Impolitiself and the immediate neighbourbood 7 seats fell to the National Congress Party of Impolitanta, whose leader, al-Sa'dawn opposed the federal principle and advocated the formation of a nuitary state with legislative representation distributed according to population, a procedure which would ensure to Tripolitania a great preponderance in the new state Violent disorders broke out in Tripoli on Pebruary 20th 21st and led to the outlawing of the National Congress Party and the deportation of its leader al Sa'daws This did not mean the end of friction in Terpolitama In September 1952 a Fundamental Law created for that province a Legislative Council of 40 members (50 to be elected and 10 to be nominated by the King) The first elections were held in March 1953 In January 1954 the King was led to dissolve the Legislative Council of Tripolitania on the ground of its failure to cooperate with the Federal Government Moreover, there had been sharp differences of opinion between the King and the Federal Prime Minister himself a Tripolitanian, who had tendered his resignation in September 1953 but had remained in office In February 1954 the King accepted the Minister's resignation. In April a short lived Cabinet was replaced by one of a more stable nature

Grave financial and economic problems also awaited solution. About 80 per cent of the population of Libya were engaged in agriculture, but owing to the low rainfall, the hot desert winds and primitive farming methods the average yield is small. There were no important mineral resources and only a few industries, most of them in Italian hands Since 1945 exports had sufficed to meet only about 50 per cent of the cost of imports, most of which had been in the form of consumer goods needed to maintain the already low standards of life, and not of capital equipment and machinery. Income from foreign military establishments had been estimated as being 50 per cent above the total value of exports. Drought in Cyrenaica (1952) and Tripolitania (1953) has meant a diminished yield of olives, citrus, cereals and the like, and caused a sharp fall in the livestock of the new state. Moreover, the world market prices for esparto grass, a main export from Libya, declined rapidly in 1953; while by that year the stores of war-time scrap, hitherto an important source of revenue, were almost exhausted. The financial situation was reflected in the fact that during the first budgetary period of the new realm, i.e., April 1952-March 1953, Cyrenaica alone spent fr million more than it could provide from its own revenues and its share of foreign aid.

Efforts were undertaken, with Western technical aid, to increase the economic resources of Libya, e.g., to improve irrigation and initiate schemes for water catchments, to extend re-afforestation, to teach better methods of farming, and to explore the possibilities of extending industries which could process local products and raw materials such as edible oils, fruits, vegetables, fish, etc.

FOREIGN RELATIONS

Since 1951 there have been important developments in the sphere of foreign relations. The first of these was the admission of Libya to the Arab League in March 1953, an event which underlines the social, historical and cultural links that bind Libya to the Arab lands. The second development reflects the economic difficulties of the new state and the close relations which exist with the West. In July 1953 Libya concluded with Great Britain a treaty for a period of 20 years. The United Kingdom, in return for permission to maintain military and air bases in Libya, undertook to grant to the new state an annual sum of £1 million which is to be expended on economic improvements, and a further annual sum of £2,750,000 destined to meet Libya's budgetary deficits. The financial obligations embodied in the treaty will be subject to review after each period of five years.

Since the summer of 1953, Libya has done much to extend her relations with the western powers. In September 1954 a number of air bases were granted to the United States of America in return for economic and financial aid amounting to some 40 million dollars payable over a period of twenty years. It was later announced that the United States had decided to give increased assistance to Libya, subsidies to the sum of 9 million dollars being envisaged for 1956, and of 11 million dollars for 1957. Great Britain, in July 1956, undertook to train and equip an Arab legion on behalf of the Libyan Government. Libya's request to be admitted as a member of the United Nations was approved in December 1955 and in this same year France agreed to withdraw the troops which she had hitherto maintained in the Fezzan. In regard to the Communist world the Libyan attitude has been more reserved. A Soviet ambassador indeed began his duties at Tripoli in January 1955, but an offer of Russian economic help was rejected in March 1956.

At home a certain degree of tension was visible during the first months of 1954, when the Legislative Council of Tripolitania had to be dissolved because of its failure to co-operate with the administration. At the close of 1954 a sharp crisis occurred in the affairs of the ruling house, the King being compelled to declare a state of emergency in Cyrenaica and to banish seven members of his family to the south Libyan desert. On October 20th a royal decree defined the line of succession to the throne as being restricted to the King, the Queen and their descendants.

In the winter of 1955/56, Libya granted concessions for oil exploration to several American companies. A Libyan university was opened at Benghazi in January 1956 and a national bank in the following April. The critical problem for Libya, a kingdom which suffered each year from a large budgetary deficit, was to ensure that enough funds from abroad should be available to meet the normal expenses of government, to pay for much-needed technical aid and to sustain the proposed programme of internal improvement.

During 1956 Libya negotiated with several European states, seeking either to amend former, or to conclude new agreements. There were reports in December 1956 and again in April of the next year that the Libyan Government would approach Great Britain with a request for a favourable revision of the Anglo-Libyan treaty of 1953. In November 1956 France ratified the pact of friendship that she had made with Libya at the end of 1955. This agreement provided for the withdrawal of some 400-500 French troops from the Fezzan, for a number of minor adjustments in favour of Libya along the frontier with Algeria and for certain concessions to France in regard to the use of airfields. In October 1956 Libya signed with Italy an agreement resolving finaucial problems which had arisen as a result of Libya's attainment of independence. Italy undertook to pay Libya £L.1,000,000 within three months and to provide, over a period of three years, credit to Libya of £L.1,750,000 for the purchase of Italian goods.

In May 1956 Libya concluded a trade and payments pact with Egypt, arranging the exchange of Libyan cattle for Egyptian food-stuffs. Provision was also made for the establishment of a joint Chamber of Commerce. At the time of the Sucz crisis Libya was obliged, however, to ask the Egyptian military attaché to leave on the grounds that he was engaged in 'lharmful activities''. Libya signed a treaty of friendship with Tunisia in January 1957; this treaty envisaged collaboration between the two states in matters of a cultural and economic nature.

In November 1957 the Turkish Republic made over to Libya military equipment to the amount of 5½ million dollars. There had already been reports of the possibility of Turkish military assistance on the occasion of the visit of the Prime Minister of Turkey to Tripoli in January 1957. Also in November, the United States placed at the disposal of Libya arms to the value of 15 million dollars. Libya also received consignments of arms during this same period from Egypt (October 1957) and from Iraq (January 1958).

It was reported in March 1958 that the U.S.S.R. would be willing to assist Libya with the building of two hospitals under a 2,800,000-dollar aid programme designed to include the training of Libyan health workers at Soviet universities.

The President of the Turkish Republic, Celal Bayar, paid a state visit to Tripoli in February 1958. In June there were discussions between representatives of Libya and Gliana about the establishment of a communications network between their two countries. The Prime Minister of Libya, 'Abd al-Majid Kubar, who had taken office in May 1957 on the resignation of his predecessor, Mustafa ibn Halim, went to London at the end of April 1958 in order to discuss the financial assistance that would be given to Libya during the five years 1958-63 under the terms of the Anglo-Libyan agreement signed in 1953. He announced to the Libyan Parliament in May 1958 that in the five-year period ending on April 1st, 1963, Great Britain would provide subsidies to the amount of £3,250,000 per annum, would make available light arms and equipment for 5,000 Libyan troops and would also continue the programme of

free military training. He also stated that the British Government would no longer give $\underline{\ell}$ 1 million per entire to the Libyan Development Agency, as it had done since 1933 and that the United States intended to contribute the Agency 5.5 million follars during tion next five years

In Angest 1960 the Libyan Government announced that the US A had agreed to pay to one one dollars per annum for the use of military bases in Libya An agreement for technical and encountie co-operation was signed at Tiproll on July 8th, 1960, between Libya and the Germann Teckersh Government German expects were to be sent to Libya in order to advise our matters connected with agreeding facilities in mechanical and electrical reguerous great was stated at 19 thou that the Germaniff ederal Government would great to Libya a long term loan a mounting in value to were 4,500,000 of or agreed until and in desirable projects.

OIL DISCOVERIES

Oil, and the search for new od resources, had become on of the man interests of the Lilyran government. By the end of 1959 some fifteen companies held oil concessions in Libya. An antifield at Zellen in Cyrenalica was discovered in June 1959. Before the year was out, six productive wells had been found in Tipolishan, four in Cyrenales and one in the Tezzan. On Vay 44th, 1966, the Libyan government promingtact a law establishing a Comnoi of Development (blaylis al-li mai) to examine the natural resources of Libya and to consider projects and policies of an economic and character. By the beginning of 19th 19th of the resources of the state of the property of the control of the control of the control of the control of the oil of yet day. The development of the oilselds is dealt with in greater detail in the Economic Survey shich follows the history.

The International Bank for Reconstruction and Development under public in July 1960 a general report on the Libyan economy. This report expressed the view that oil discoverees would not statifice, at least in the immediate future, to solve the basic economic problems of Libyas be largy self of revenues from oil could be forecen within the next, five years. Agriculture was of vital Importance, the proposed of the proposed of the period of the peri

In August 1954 British Petroleum discovered largo oil treaves in eastern Libya not far from the Expytian itonier, and stated that a pipeline would be built to Torons for the exploitation of this feld. The Evo Libya corporation toonfirmed in November that it intended to construct a gas liquelation plant at Morea Dregs. December 1964 witnessed the opening of a pipeline from the Hofras.

outseld to a new leading terminal at Ras Lanut on the Gott of State. Oil production showed a tremendous increase in the 1952-56 period, with exports rising from 8 million tons in 1963 to 9ver 7 po million in 1965 Libyan oil has an unusually few sulphur content, which makes it expectally suitable for internal combustion engines as less waste products remain after combustion. Most of the oil revenues have been devoted to education, health and communications projects since 1964, in which sphere Libya's facilities have been completely transformed.

GOVERNMENT CHANGES

A general election was held in Labya on January 17th, 1966 Most of the 55 seats were contested but there was no party system in operation. The election was fought manify on a personal basis. Secret ballotton, insited in earlier elections to the urban areas was now extended to the rural districts. The Firms Misuster and the other members of his Cabinet retuned their seats. A number of reinsieristle changes were made however, in l'Edward yellow.

In October 1960 the Libyan Chumber of Deputies cancilled a government undertaking to pay 4,000 000 (in the place of an original estimate of \$1,000 000) to the company engaged in the construction of the Ferzian Road. The Prime Minister, Abd of Wajid Kubar, failed to win a new cabact was formed under the leadershop of Wubanmad hin Othman as Sand The administration of Wubanmad hin Othman was itself recall in May 1961. Decrees issued by King Idrie led to the creation of new ministries for indostry and for Petroleum Affairs The cabinet was uncreased from fourteen to fifteen members in consequence this time.

There were some more Cablert changes in the Libyan Government during Janusty 1962, further adjustments came about in October of the same year when by royal decree, the Covernment headen by Mahammad hin such that the Cablert of Covernment beaden by Mahammad hin such the Cablert of Covernment beaden by Mahammad hin with the Cablert of Covernment of Cov

In November 1972 Libys signed with Morocco a pact of friendship and co-operation which covered centoming friendship and co-operation which covered centoming agreements designed to give premium and settlements. Specific agreements designed to give premium settlements agreements designed to give premium settlements this pact and to promote economic, cultural and social co-operation between the two countries were concluded on December 23th, 1962, in the course of a visit to Libys by a Horoccan delegation led by the Foreign Muniter

The Libyan Mindster of Defence visited London in July 1952 Mr Heath the Lord Privy Seal announced on November 237d, 1952, that the Lirlitch Government intended to send to Libya way minesweepers which would form the nucleus of a Libyan Navy. A British naval form the nucleus of a Libyan Navy. A British naval form the nucleus of a Libyan of the navel of the

A UNITARY REALM

Dr Fekin stated in April 1965, that his government intended to introduce legislation designed to transform Libya from a federal into a unitary state—a change which would mean increased efficiency and considerable economies in administration On April 15th the Primo Minister precented to the Chamber of Deputies a Bull which contained a

number of important reforms: (1) the franchise was to be granted to women; (2) Libya would have (as before) a bicameral parliamentary system, but henceforward the King was to nominate all the 24 members of the Senate (heretofore half nominated and half elected); (3) the Kingdom of Libya would cease to be a federal state comprising three provinces (Tripolitania, Cyrenaica and Fezzan), becoming instead a unitary realm divided into ten administrative areas; (4) the administrative councils established in each of the three provinces were to be abolished, the exercise of executive power residing now in the Council of Ministers. Libya became a unitary state by royal proclamation on April 27th, 1963. Each of the ten new administrative areas was to come under the control of a governmentappointed administrator, aided by local advisory councils for matters relating to health, labour, education, agriculture and communications.

LIBYA AND AFRICA

A conference of African Heads of Government met at Addis Ababa in May 1963. As a consequence of decisions taken at the conference Libya closed her air and sea ports to Portuguese and South African aircraft and ships. Dr. Fekini paid an official visit to Algeria in August 1963. A joint communiqué issued on August 28th made it known that Libya and Algeria had agreed to enter into a pact of friendship and co-operation. It was reported in October 1963 that a Libyan mission was to visit factories at Milan and Turin devoted to the manufacture of agricultural machinery, and also to make a tour of Italian land reclamation schemes. One aim of the mission would be to explore the possibilities of Italian assistance with reclamation projects envisaged in the Libyan 1963-68 development plan. A Franco-Libyan agreement of 1955 had allowed France to retain in Libya certain military facilitiesnotably in the field of communications—for the defence of her African territories. The future of this agreement was raised by Dr. Felcini in November 1963. He expressed the view that the recently acquired independence (1960) of Libya's southern neighbours, Niger and Chad, rendered the agreement obsolete and he thought that the whole matter should be considered anew.

On January 22nd, 1964, Dr. Feltini resigned his office of Prime Minister after student demonstrations at Benghazi and Tripoli. The new Prime Minister was Mahmud Muntasser, hitherto Minister of Justice. On February 22nd President Nasser of Egypt had called for the closing of the British and American bases in Libya. The Libyan Government issued a statement on February 23rd to the effect that it did not propose to renew or extend its military agreements with Great Britain and the United States and that it supported the other governments of the Arab world in the resistance to imperialism. Mr. Muntasser stated on March 9th that he had asked Great Britain and the United States to enter into negotiations over the future of their Libyan bases. He amplified this statement on March 16th, when he defined the aim of his government as the termination of the existing agreements with Great Britain and the United States and the fixing of a date for the evacuation of the bases in Libya. The Chamber of Deputies now passed a resolution calling for the achievement of this aim and providing that, if negotiations were unsuccessful, the Chamber would pass legislation to abrogate the treaties and close the bases. The Anglo-Libyan treaty of 1953 was due to expire in 1973. Under the treaty Great Britain maintained a Royal Air Force staging post near Tobruk, an Air Force detachment at Idris airport in Tripoli and Army District Headquarters at Tripoli and Benghuzi. The American-Libyan agreement of 1954 was to expire in 1971. Near Tripoli was situated the largest American air-base outside the United States. Under the

treatics Libya had received large amounts of financial, economic and military aid from the United States and from Great Britain. Libyan dependence on such aid had diminished, however, as a result of the swift development of the oil fields, which provided the state with increasing revenues. It was reported in June 1964 that Great Britain had offered to withdraw from her military positions in Tripolitania, the western region of the Kingdom.

At a conference of Economic Ministers held in Tunis on August 30th-September 1st 1964 Algeria, Morocco, Tunisia and Libya signed an agreement stating their readiness in principle to create a system of special relationships amongst themselves in the field of trade exchanges, economic co-operation and the harmonization of tariff policies. During the course of a subsequent conference held at Tangier in November 1964 it was decided to establish between the four states a joint and permanent consultative committee which would serve to harmonize in general the development plans envisaged by the participating governments. The Committee could have an administrative secretariat and a number of specialized commissions. It was also resolved to create an industrial studies centre with a permanent head-quarters at Tripoli. The centre was intended to co-ordinate the industrialization projects of the member states.

The Ministers for Economic Affairs of the four Maghreb powers (Morocco, Algeria, Tunisia, Libya) held a conference at Tripoli on May 25th to 27th, 1965. A protocol was signed for the co-ordination of policies in the export field, under which an export office was to be established at Algiers. Other projects envisaged at the conference concerned telecommunications, an industrial studies centre at Tripoli and the development of steel production.

RECENT DEVELOPMENTS

At elections for the Libyan Parliament held in October 1964 moderate candidates won most of the 103 seats. Women received the right to vote in this election. King Idris dissolved the Parliament, however, on February 13th 1965 as the result of complaints about irregularities in the election procedure of October 1964.

The Prime Minister, Mahmud Muntasser, resigned from office for reasons of health on 21st March, 1965, to be succeeded by Husayn Maziq, Minister for Foreign Affairs. A new election for Parliament was held on May 8th, 1965, over two hundred candidates contesting the 91 seats, 16 members being returned unopposed.

The withdrawal of the British troops stationed in Tripolitania took place in February and March, 1966. Britain retained certain facilities at Idris airport near Tripoli, small detachments at Benghazi, Tobruk and the R.A.F. staging post of El Adem, to the south of Tobruk. Discussions on the eventual withdrawal of the remaining British and American forces stationed in Libya were initiated in the latter part of 1967.

The ontbreak of the six-day Arab-Israel war in June 1967 was followed by serious disturbances in Tripoli and Benghazi, in which port and oil workers and students, inflamed by Egyptian propaganda, played a prominent part. The British and United States embassies were attacked and the Jewish minorities were subjected to violence and persecution which resulted in the greater part of them emigrating to Italy, Malta and elsewhere. The Prime Minister, Husaya Maziq, proved unable to control the situation and was dismissed by the King on June 28th. Firm measures by his successor, Abdul Qadir Badri, brought a return to order but the antagonisms he aroused forced him to resign in turn in October. He was succeeded as Prime Minister on October 28th by the Minister of Justice, Abdul Hamid Bakkush, a Tripoli lawyer.

An immediate result of the Arab-Israel war in June 1967 was a fall in the Libyan output of crude oil by about 80 per cent because of the boycott of oil supplies from Arab per cent because of the boycott of oil supplies from Arab Commistry in Britain the United States and Federal Commistry of the Britain States of the Commistry of the Commistry of the Commistry of the States of the States of the States Canal brought about a considerable increase in the sport of oil was lifted in September The closure of the States Canal brought about a considerable increase in Libyan of overtrained about 10 AR and Jordan to allevaise to consequence of the war Libyan soil output increased by about 50 per cent in 1963 and the country became after only 74 years the second ingreet producer in the Arab world with the great advantage os a supplier to Lurge of ment of importance for the future was the discovery by the Octodratal Oil Corporation of immense underground water reserves near huffar.

The new Prime Minuter Abdul Hamid flakkush was a progressive like relatively young and well educated administration immediately embarked on a programme of rapid change secting to modernue libys a sediministration reform the civil service and improve the educational system. He also sought to provide the armed forces with up-to-date equipment and under a contract a announced in April 1958 the prochase from a British first of a surface-to-arr missile defence system conting from million was arranged An agreement to buy British Leavy arms notably the advanced Christian Lanker followed in proceedings the advanced Christian Lanker followed in grant proposed to premier by Mains et Cloddast for pace of his reforms having apparently alternated some conservative elements Both uninterse enjoyed close relationships with the Western countries but played little part in Arabpolitics

THE 1988 COUP

On September 1st 1960 a null tary coup was staged in Tipoly whilst the Aing was in Turkey for medical treat ment Within a few days the new repime gained complete control of the entire country. The econy was remarkable for the absence of any opposition relatively few arrests the absence of any opposition relatively few arrests. The Thevolubrium Common Colon at Ref. 12 Invalidy remained anonymous but was soon revealed as a group of young army officers the leader Musummar Gaddati bring only 37. The aged King reluved to abdicate but accepted with a respective to the work of the control of the control of the control of the control of the control of the control of the control of the control of the second of the control of

The provisional constitution announced in November stated that supreme power would remain in the hand in the R CC which appoints the cabinet there was no mention of any future general election of of a National mention of the province properties of the National Advanced to the province of the National Advanced to the Nat

The principal force underlying the regime a policies has undoubtedly been the professed one ni Arab nationalism Internally this has led to the strict enforcement of the royal law requiring businesses operating in Libya to be controlled by Libyans—banks have been particularly affected by this but oil companies are not at present covered by this law The remaining British mulitary establishment in Libya requested to leave as soon as possible was finally removed in March 1970 and the much larger US presence at Wheelus Field followed suit in June Most of the European and American managers teachers technicians and doctors have been replaced by Arabs with equivalent training mainly from Lgypt English translations disappeared from street signs official stationers and publications and most hoardings the use of Arabic alone being permitted simi larly the Islamic prohibitions on alcoholic druks and certain Western clothes were officially revived. In July 1970 the property of all Jews and Italians still living in Libya-some 25 000 people-was sequestrated by the government and both communities were encouraged to leave without delay some Jens were however offered compensation in government bonds With regard to the Italians Col Gaddafi said the Liby an people are receiving back the property usurped by the lascists who came to impose their lyranny in the same month the three main ol marketing companies-Shell Esso and an ENI subsidiary-had their distribution facilities nationalized

Another anti government plot was reported crushed in July 1970 in the autumn two munistra respond and there were signs of a power struggle developing in the Revolutionary Commind Council The internal dissension apparently Increased in the first part of 1970 over the proposed federation with the UAR Syria and Sudan and over President Gaddafa's promises of a constitution and political institutions including an elected president A step towards introducing these was the announcement in June 1971 that an Arab Secusibit Union was to be would also presumably assist integration with the UAR would have part and Sadun.

In April 1971 the negotiations with the oil compassion operating in Libya which had begin soon after the 169 coup finally ended in a new five year agreement raising the total posted price for Libyan crude to \$3,447 per barrel In the last stage of the negotiations conducted in Tripoth the Libyan Gotterment alon projected the Tripoth of the Indiana India and Studi Arabian Government Tripoth of the Indiana India and Studi Arabian Government Tripoth of the Indiana India and Studi Arabian Government Studies and Studies an

FOREION POLICY AFTER THE COUP

The new regime almost itnmediately received recog mition-indeed acclaim-from the radical Arab countries and the USSR and the rest of the world also granted recognition within a few days. As would be expected from the Arab nationalist inspiration behind the revolution the monarchy a close ties with the Western powers were abandoned in favour of close relations with Egypt in particular this friendship became the basis of an important triple alliance announced late in 1969 the Sudan being the third member The alliance was intended to develop both politically-as a strong bulwark against Israel on the West and economically in that the economies of the three countries complement each other to a considerable extent. However when a foderation agreement was signed in April 1971 it was Syria which became the third member Sudan hopes to join the federation later when her domestic astuation is more favourable. Tripoli has also adopted a militant position on the Palestine question and this created some diplomatic problems regarding arms contracts

The royal government a contract to buy a British missile defence system implicitly aimed against Egypt was duly cancelled; fulfilment of another major British contract, for the advanced Chieftain tanks, was delayed by Britain, which feared that the tanks might reach the Palestine front. Colonel Gaddafi's government has itself ordered over roo French Mirage jet fighters. When delivered these jets will enormously increase the size and striking power of the small Libyan Air Force, which has no pilots capable of flying such advanced aircraft. Hence there were widespread fears in the West that Egyptian pilots would fly the Mirages, which might then be used to escalate the campaign against Israel. Deliveries of Soviet tanks were reported in the summer of 1970.

Within the Arab world, the coup appeared to have reorientated Libya away from the Maghreb towards the Middle East; in the summer of 1970 Libya withdrew from the Maghreb Permanent Consultative Committee. There was also little evidence of any closer relationship with the communist powers. China was recognized in June 1971, and the U.S.S.R. has been given due credit for its Middle East policies. But communism is regarded in Libya as a "foreign" ideology, antipathetic to more "progressive" Arab socialism (as in Sudan). Hence in July 1971 Gaddafi was ready to help President Nemery of Sudan to regain power after a coup led by communists had ousted him. A regular BOAC flight from London to Khartoum was forced down over Libya and two leaders of the coup, one of whom, Maj. al-Nur, was travelling back to become head of state, were taken from the plane and handed over to Sudan,

where they were almost immediately executed by the restored regime.

Although in July 1970 the Libyan Government followed the U.A.R. in accepting the American proposals for a cease-fire with Israel, it has continued its militant state. ments on the Middle East problem. President Gaddafi has stated that a peaceful solution is impossible, and has, more recently, rejected the UN Security Council resolution on which the Rogers initiative was based. During the fighting between Palestine guerrillas and the Jordanian army in September, Libya redirected its financial aid from the government to the guerrillas and broke off diplomatic relations with Hussein's government. It also criticized the failure of the Iraqi troops stationed in Jordan to assist the guerrillas. But Libyan threats to intervene in Jordan on the guerrilla's behalf have proved empty, and the conference of heads of state Gaddafi called at the end of July 1971 to discuss the Jordanian Government's final assault on the commando bases only issued more threats.

Relations with Tunisia improved in the last half of 1970 after initial concern in Tunis in 1969 at the radical leanings of the new Libyan regime, and President Gaddafi headed a delegation which visited Tunisia in February 1971. Relations with Morocco were severed in July 1971 after the Libyan Government prematurely gave its support to an attempt to overthrow King Hassan which had failed within twenty-four hours.

ECONOMIC SURVEY

In some respects the economy of Libya is unique among the countries of the Middle East. In most of the Arab countries which have achieved their independence since the end of World War II, the basis for some kind of economic viability already existed—in the Sudan, for instance, or even in the Levant states. But the three provinces of Tripolitania, Cyrenaica and the Fezzan (now officially known as the Western, Eastern and Southern provinces respectively), which were welded together in 1951 to make the United Kingdom of Libya had never formed an economic unit. Moreover, their economic life, in the twentieth century at any rate, had largely if not entirely been dependent upon help from abroad—from the Italian colonisers between the wars, and from the British and their allies after 1943. In the 1950s, per caput income was less than £L18 and agriculture was the basis of the economy, employing 80-90 per cent of the population. It also formed the bulk of exports (together with scrap metal salvaged from World War II wreckage). But even in the pre-oil record export year of 1957, exports only reached £L14.8 million while non-oil sector imports totalled £L21.3 million. In the same year, domestic revenue only covered £L9.6 million of the government's ordinary and development expenditure of £L17 million. The deficits in trade and government expenditure were covered by foreign aid, oil company exploration activities and the expenditure of foreign (U.S.A. and U.K.) military bases. The discovery of oil has transformed the economy. Between 1962 and 1968, national income increased by 344 per cent from £L131 million to £L798 million and gross national product increased by 458 per cent from £L163 million to £L909 million. The deciding factor was the increase in the value of oil exports during the period—by 835 per cent; exports accounted for 51 per cent of gross domestic product (G.D.P.) in 1968.

The structure of G.D.P. has also been profoundly affected by the advent of oil and in some ways has been

distorted by it so that while other sectors have grown absolutely, their importance has declined relatively. As a whole, G.D.P. (at constant prices and factor cost) increased by 365 per cent between 1962 and 1968. The value of agriculture grew by almost 30 per cent, wholesale and retail trade increased by 231 per cent, construction by 385 per cent, manufacturing by 90 per cent and ownership of dwellings by 29 per cent. At the same time, the value of mining and quarrying decreased from 9 to 3 per cent of G.D.P., trade from 9 to 6 per cent, transport and communication from 6 to 3 per cent, manufacturing from 6 to 2 per cent, and ownership of dwellings from 17 to 5 per cent; only the value of construction actively maintained its share of G.D.P. at 7 per cent. The share of mining increased from 28 to 61 per cent of G.D.P. In foreign trade 99.9 per cent of exports are petroleum and products and a healthy trade surplus is being maintained. This surplus was £L532.6 million in 1969. Government ordinary and development allocations have grown enormously and for 1971-72 have been set at £L501 million. Since the 1969 revolution, the direction of the economy has been rechannelled somewhat with the advent of increasing state intervention, termed by President Qadhafi as "Islamic socialism". The government has at least a 51 per cent share in a number of sectors including banking and insurance, public transport, some sections of the construction industry and some manufacturing concerns. There is also a state petroleum company, LINCO. At present, however, all oil production is in private hands but rigorously overseen by the Ministry of Petroleum. Until the country's oil resources began to be exploited not more than 25 per cent of the population lived in the towns. This is no longer true, and the drift to the towns has caused a serious problem. Something like half of the rest of the population are settled in rural communities, and the other half are seminomads, who follow a pastoral mode of life. The Western provinces are the smallest, but they include Tripoli, which

is the brainess capital of Labya the population of the Impol district being 379 031 m 1064. The man town of Cyrenaca is Bengham the population of the Bengham district in 1764 being 378 367 bit Cyrenaca is an area three times the save of Tripolitania. The Fertam is about three a large at Tripolitania and its chief town is Selba. The overwhelming majority of the population of Lipsch and the same of the properties of the prop

AGRICULTURE

Until the discovery of oil the basis of the Libyan economy was agriculture However the oil undustry prives durect employment to no more than a small fraction of the population, so although the prosperity brought by oil has population, so although the prosperity brought by oil has come importance. In 1931 Mr. John Lindberg, examining Libyas economic position for the United Nations Technical Kasustance Administration asserted that at feast 80 per cent of the population was amplied in agriculture in Libyas was then carried out 1935. Determine Library and the carried out 1935, Determine Engenment Sweep of Libyas or instance said that it is a common sight to see Arabs ploughing by means of a camel dragging a pointed stick through the ground or threshing by means of vallocks or donkeys treading a currently path over a heap of barriey or wheat was made to develop the country by modern methods through settlers heavily subsidued by the Islain Government. But these more advanced techniques were employed as a very small part of the contry oilly and had hittle side of the contingue of the contract of a population lived on tarmy of the cent of the population lived on tarmy.

It was estimated in the United National survey mentioned above that out of the total area of the country, namely 1 759 000 square km , no more than about 142 000 square km. or about 8 per cent of the whole was cultivable Tri politania possesses about 101 000 square km of the cultivable area and Cyrenaica about 30 000 square km. in the Ferran there is no more than 16 500 hectares of irrigated gardens in the oases and perhaps 740 000 hectares of date paims. This bowever is far from being the whole story for of the cultivable area in Tripolitania and Cyrenaica something like 80 per cent is used for grazing so that the area available for agriculture proper is comparatively small The area under progration has increased steadily and has reached about 501 000 hectares according to a 1968 United Nations estimate The present government is now sponsoring several land reclamation and irrigation projects including the Kufra project to irrigate 10 000 hectares and the Tawargha project to reclaim 3 000 bectares In mid 1970 all Italian owned land and property in Libya including 37 000 hectares of cultivated land was confiscated and plans were made to distribute the expropriated lands to Libyan farmers with government credits for seed fertilisers and machinery In addition the govern ment is undertaking a major road building effort to include 2 400 kilometres of new rural roads and 1 200 kilometres of new highways

A census of agriculture carried in 1960 by the Ministry of National Economy and published in 1963 gave the area sown to cereals in 1960 as about 18 000 square tem But the streas on in a given year depends largely on the amount and the timing of the rainfall Animal hashandry has therefore been the basis of farm larg in Libya. According to the cenans of agriculture there were in 1960 some 2 509 000 sheep and 2 391 000 goats in the country The sheep are mainly of the fat tailed Barbary type like the goats they are used for meat milk and wool The 1960 census gave the number of cattle as 223 000 They were used principally for draught and transport like the donkeys and camels of which there were 510 000 in 1960 Official estimates for 1967 show a marked fall in all classes of livestock. All in all hvestock has been the most important single source of income to the farmers Of the cereal crops barley which is the staple diet of the Arabs is far and away the most important while wheat was grown exten arvely by the Italian settlers in Tripolitania Production fluctuates widely with the rainfall In the drought year 1947 for instance the country's production of barley and wheat was 22 000 and 6 000 tons respectively and substan tial imports were needed whereas two years later barley production was 177 ooe tons and that of wheat nearly 18 ooe tons. The 1960 census of agriculture gave the production of barley throughout the country in that year 25 about 233 000 tons of wheat as about 68 000 tons In 1968 production of harley was about 98 000 tons and of wheat about 52,000 tons

Next in value after the hariey crop is that of olives which were planted by the Italians in large areas in the coastal atrip of Tripolitania. The Italians also planted about 300 000 estrus trees in Tripolitania and Libyan oranges and taugerines have been successfully marketed in the Umted Kingdom. Dates are grown in cases in the Persan and on the coastal belt and form an important article of food Other important food crops are tomatoes almonds castor beans and groundnuts which are grown mainly in Tripolitania production has increased rapidly since 1945. An important crop is that of esparto grass (slipa lenaist sima) which grows wild in the lebel It is used for the manufacture of high qualities of paper and bank notes and was formerly the most important article of export It 15 handled by the National Liparto Development Corpora-tion of which the government owns 80 per cent of the shares It is carrous that the plant silphium which made Cyrene famous in antiquity and which is well known from flerodotus and from the celebrated Arkesilaos vase in Paris has not been identified with any certainty

Much has been done by the government to develop the country's agriculture though one of the difficulties with which it has to contend as the high degree of fragmentation of boldings except in Cyrenates where boldings are larger than average. All the same mechanisation has begun and the 1900 crossic of agriculture gave the number of tractors after the country obtained its independence. The mission after the country obtained its independence. The mission after the country obtained its independence. The mission after the country obtained its independence. The mission actived out a number of experiments on plant adaptability and fertilisers and similar matters on sheep breeding and fruit growing and among other things set up an experimental plant to process dates This may be of importance up to the present the quality of Libyan dates apprendict of the complete on world marked. A agricultural bank authorized in co operation with the Ministry of Agriculture to make leans to farmers at low rates of interest.

The growing revenues which the government now derives

from oil have of course enabled it to expand greatly the aid given to agriculture. Thus in the budget for 1971–72, the allocation to the Ministry of Agriculture was £L70 million, a sum which was a good deal larger than the total value of the country's exports in 1960 before oil was exported; and the development budget for 1971–72 provided for the expenditure of £L50 million on agriculture. Quite apart from this, new possibilities for agriculture were created by the discovery of water in large quantities during 1968 at Kufra, in the south east of the country. The discovery was made by Occidental Oil, one of the oil companies operating in Libya (see below).

FORESTRY AND FISHING

Of some importance, too, have been the efforts made by the government to deal with the problem of afforestation. The north of the country is supposed at one time to have been covered with forests, but the goat and other enemies of the trees have reduced the wooded area to a negligible figure. The Italians, it is true, attempted to encourage reafforestation, but their plantations suffered severely in the war, and though the British administration planted many trees, there is still much to be done. In 1968, for instance, the government announced its intention to hectares. A promising small-scale 5,500 experiment to stabilise the soil with a synthetic rubber spray and then planting eucalyptus saplings was undertaken successfully in 1971. Although the Arabs of Libya are not a seafaring people, fishing is potentially of importance. The off-shore waters abound in fish, especially tunny and sardines. Most of tee fishing is done by Italians, Greeks or Maltese, however, and though there are several tunny factories it was said by an official British report on Libya's economy that "though catches could easily be increased, the local fishermen forcibly oppose any increase in order to keep prices up". The government further hopes by training fishermen and by introducing trawlers and modern methods of refrigeration to develop a fishing industry. Of special importance are the sponge-beds along the wide continental shelf off the Libyan coast. These are exploited by foreign fishermen and divers, mainly Greeks from the Dodecanese, and the sponges are generally sold in Greece or exported to Western Europe and the United States by Greek merchants.

OIL

That oil was present in both Tripolitania and Cyrenaica had long been suspected, and for several years after Libya became independent, a large number of the bigger oil companies carried out geological surveys of the country. In 1955 a petroleum law came into force setting up a petroleum commission, which was empowered to grant concessions on the basis that any profits would be divided equally between the government and the operating company, and that parts of each concession had to be handed back to the government after a given period of years. Under this law, still in effect but with amendments, concessions were granted to many American companies and to British, French and other foreign groups. In 1969 33 firms held concession rights.

From 1958 onwards, important strikes were made in many areas. By 1968 Libya had become the fourth largest exporter in the world, with a production in that year of 126 million tons and a revenue from the tax and royalty paid by the companies estimated in the fiscal year 1969-70 at £L356 million. In 1970 there was a further increase in oil production to 166 million tons, and it was estimated that government revenue for that year would amount to about £L554 million. The Libyan authorities expect their revenue from oil to reach £L878.6 million annually to 1975, since the successful conclusion of crude posted price negotiations with the oil firms in Tripoli in 1971.

A government survey published in 1970 covering 1969 stated that some 6,395 persons were directly employed in the oil industry, of whom 2,627 were foreigners. During the year 1969 there were on the average 23 oil companies actively operating in the country spending about Il7; million in Libya, of which about £L50 million went on transport services and other contractors and about fL6 million in wages. By March 1970 2,558 wells had been completed, of which only 1,153 were dry. In January 1970, there were 21 companies producing and exporting oil. Total crude oil production in 1970 amounted to 166 million tons and natural gas production totalled 713,562,325 cubic feet. Exports take place from five different ocean terminals connected to the various fields by pipeline built by the five groups which have made the major finds. The pipeline system and the terminals are however available to other groups which are producing oil.

The earliest of the five ocean terminals is that opened at Mersa Brega in the Gulf of Sirte in October 1961. The pipeline was built to Bir Zelten, some 200 miles south of Benghazi, where Esso Standard (Libya) had found oil in 1939. This group also opened a refinery at Mersa Brega in 1967, and has installed a gas liquefaction plant to prepare gas for shipment to Italy and Spain. The second terminal to be opened, in 1962, was that at Ras el Sidr, to the west of Mersa Brega. This was built by the Oasis group, in which originally three American companies, Continental Oil, Marathon, and Amerada held equal shares, though Amerada sold half of its holdings to Royal-Dutch Shell in 1966. Oasis' original find was at Hofra, from which the pipeline runs to the sea at Ras el Sidr. A third group consisting of Mobil and the German firm Gelsenberg also found oil near Hofra, but built another pipeline to a terminal at Ras Lanuf, just east of Ras el Sidr, which was

opened in 1964. The fourth of the terminals to be opened was at Mersael Hariga near Tobruk early in 1967. From Alersa el Hariga a pipeline some 320 miles long runs to Sarir, near which British Petroleum and its American partner, Bunker Hunt, had made an important find in 1964, and another two years later. The fifth and latest is at Zuetina, about 150 miles south of Benghazi. This was opened in 1968, as the terminal for a pipeline about 135 miles long to two fields at Augila and Idris. Here an American Company, Occidental Oil, which did not even obtain its concession until early in 1966, had found oil in large quantities. As already stated there are a number of other companies producing oil besides the five major groups mentioned, but of these others the only one which up to the end of 1967 was of real importance was the Amoseas group, in which two American companies, Standard of California and Texaco are equal partners. This group is producing oil from the Nafoora field, not far from Augila and has a pipeline connected to the ocean terminal at Ras Lanuf. During the first eleven months of 1969, exports by the Oasis group from Ras el Sidr were the largest, at a rate of about 28 million tons a year, followed by those of Esso from Mersa Brega at 27 million tons, those by Amoseas, Mobil and Gelsenberg from Ras Lanu, at 23 million tons, those by Occidental from Zuetina at 22 million tons, and those by B.P. from Mersa el Hariga at 11 million tons.

The growth of the oil industry has been particularly rapid since the closing of the Suez Canal in 1967 because from North Africa to Western Europe, one of the world's principal centres of consumption, is of course a much shorter haul than from the Persian Gulf via the Cape of Good Hope. All the same, Libya's importance as an exporter has been recognized since 1962, when she became a member of the Organization of Petroleum Exporting Countries (OPEC); in the autumn of 1965 a law was passed bringing the arrangements under which the producing companies pay tax and royalties to the Libyan

government into line with those in force in the other Middle Eastern countries which are members of OPEC. Hitherto the price used by the companies to calculate the profits on which tax was assessed had been the price they actually realized on world markets. The new law stipulated amongst other things that the price used should be the so-called posted price instead which for many years had been much higher this the operating companies eventually accepted Negotiations began in the autumn of 1050 between the government and the companies with the object of increasing the posted price and came to frultion in April 1971 with the signing of the Tripoli agreements which raise the base posted price per barrel to 40 per cent API Libyan crude to \$3 o7 with temporary adjustments bringing the total posted price per barrel to \$3,447 The agreement also included annual incremental price rises until 1975 settlement of company income tax rates at 55 per cent (except for Occidental Oil) an assured rein estment in exploration secondary recovery or gas projects and a guaranteed supply of crude to LINOCO sufficient for local consumption Libya is also with seven other countries a member of OAPEC the Organization of Arab Petroleum Exporting Countries

In 1988 a Lulyan General Petroleum Company LIFFITO was set up by the government to act as its naturament for developing the industry being empowered to target on the property of the company of the comp

INDUSTRY

No large manufacturing industries yet exist. Before the Italian occupation primitive handicrafts produced simple consumer goods for domestic needs. The Italians developed a few industries concerned with public ntilities building tumber and construction engineering textiles tanning and leather but in Cyrenaica almost all disappeared in the course of World War II though in 1949 there were accord ing to the U N survey about a hundred establishments in Tripolitania using mechanical power The largest employers of labour before the discovery of oil were the British and the American air base at Wheelns Field (anally returned to the Libyan anthorities in 1970) followed by the port and barbour authorities and other public utility concerns According to the 1964 industrial census 46 000 were employed in industry but of a total labour force of 405 000 There were 911 industrial concerns with five or more employees each as well as 7 000 smaller scale firms Manufacturing industry is largely confined to processing local agricultural products These include carpet weaving tanning and leather working shoes building maternals (gypsum and cement) matches and soap and detergent manufacture Tood processing includes a govern ment tobacco and eigarette factory a date packing plant four tomato canning plants castor and olive oil presses several floor mills soft drinks firms and until the 1969 revolution breweries There are also a number of service industries with government participation These include all insurance firms and commercial banks a contracting firm and nation wide public transport Plans are also in hand to build a whole range of factories in the near future ranging from prefabricated construction materials to

cables glass and pharmaceuticals In petrochemicals contracts were awarded for two major projects of LINOCO the national oil firm in 1971—a refinery at Zawia and a petrochemical complex to be located near Brega

Belore the discovery of oil the country's standard of living was low even by Middle Eastern standards. The income per head of the population in the early 1950s was less than flis and the umount of revenue from taxation per bead was only a third of that raised in Egypt Undernourishment was frequent and though tropical diseases are not endemic there was a com-paratively high death rate and certain afflictions generally associated with undermounshment such as trachoma were common The country has received technical assistance from the World Health Organization, and in 1952 this body and the United Nations International Children's Emergency Fund organized a successful mass campaign against tuberculosis. In addition the uncertainty of the climate often led to unemployment or under employment and except for skilled labour which is difficult to find outside the European communities, wages were low and frequently paid in kind, particularly in the country The vast wealth created for the country by oil since 1060 is of course rapidly changing these conditions. One notable example is the improvement in the water supply early in 1969 Labya placed an order for a very large desalmation plant to be constructed at Benghazi by a British firm It will have a capacity of 4 3 million imperial gallons per day

EXTERNAL TRADE

Until oil was produced Labya a exports consasted almost entirely of agricultural products and its imports of many factured goods. In 1960 for anstance imports were valued at fl. 60 a, million and exports at fl. 4 o million leaving an adverse balance of fl. 50 a million 10 over fl. 21 million goods imported for the necessary of the groots imported for the necessary of the flat of the second of the oil companies if this figure is excluded the adverse balance of visible frade was fl. 33 million of live as first exported in the autimn of 1961 and in that year the value of imports was fl. 53 million of the which the value of prode imported for the account of the oil companies was fl. 13 6 million. The that careful oil valued at fl. 21 million is that the adverse canded out valued at fl. 21 million is that the adverse that the flat of the control oil valued at fl. 21 million is that the adverse that the sadverse of valued of valued at fl. 21 million is that the adverse that the sadverse and the value of valued in the value of valued in the control of valued at fl. 21 million is that the adverse canded the value of valued in the value of valued in the value of valued in the value of valued of valued at fl. 21 million is that the adverse can of the value of valued value of value in the value of valued values of value values of value

So rapid was the increase of oil exports in 1962 that in the third quarter of that year the value of exports exceeded the value of imports for the first time and the total value of exports in that year was [1, 05 million as times the value of exports in the preceding year Imports to 1962 were valued at [1,174 million in 1969 imports total] of [1,241 million and exports [1] rg/9 million of which \$Ly71 x or 99 per cent was accounted for by oil

Apart from oil other exports pale into insignificance consisting principally of hides and skins groundnuts almonds metal scrap an I various re exports for many years Libya a main market was Italy Thus in 1960 Italy took about 36 per cent of Libya's total exports with the Umted hangdom an I the Netherlands taking about 9 ber cent each The export of oil changed this pattern in 1968 27 per cent of Libya's exports went to West Germany 10 per cent to Italy an 1 18 per cent to the United Kingdom Their relative positions remained the same in 1969 but changed again in 1970 when Italy regained first place from West Germany Imports have consisted of a wide variety of manufactured goods such as textiles and motor vehicles but also of timber chemicals and other raw materials. In addition many foodstuffs have to be imported such as ten augar coffee and in years of drought wheat and flour In 1963 the principal suppliers were Italy with 25 her cent of the total value, the U.S.A. with 17 per cent and the United Kingdom with 12 per cent.

Over the seven years from 1951 to 1957, the adverse balance of visible trade averaged about £L10.3 million a year. During the same period the net visible income averaged about £L4 million a year, and the balance was made good by foreign economic aid. The principal source of the country's invisible income consisted of British and American expenditure on maintaining bases in the country and of the expenditure of foreign companies prospecting for oil, though some contribution was no doubt made by civil aviation, for there are two important international airports, near Tripoli and Benina, outside Benghazi.

All this was changed by the exploitation of Libya's oil. Adjusted for balance of payments purposes, 1961 showed an adverse balance of visible trade amounting to £L46.7 million. This fell to £L23.4 million in 1962, and the following years showed a favourable balance of visible trade increasing to £L212 million in 1966, £L248 million in 1967, when oil exports were temporarily suspended because of the Arab-Israeli war, to £L435 million in 1968 and £L533 million in 1969. In 1969 the balance of payments showed a surplus on current account of £L117.8 million, after allowing for investment and other income remitted abroad. The annual surpluses now realized on the current account of the balance of payments are reflected in a steady increase in the foreign assets of the Bank of Libya, which rose from £L31.2 million at the end of 1961 to £L567.9 million at the end of 1970.

FINANCE

As a result of substantial financial assistance from abroad and in the last decade from the development of the oil industry, it has been possible to maintain a remarkable degree of stability in the external value of the currency. Libya is a member of the sterling area, and until the devaluation of the pound sterling in November 1967. the Libyan pound of roo piastres was kept at parity with sterling ever since it replaced the notes of the military administration introduced during the Second World War. However, in November 1967, the Libyan government did not follow the United Kingdom in devaluing its currency, with the result that the parity for the pound sterling became 85.7 Libyan piastres instead of 100 Libyan piastres. For five years the currency was managed by a currency board including representatives of the United Kingdom, France, Italy and Egypt. Its functions were taken over in April 1956 by the Bank of Libya, which was created to act as a bank of issue and government banker and generally to perform the functions of a central bank. The backing for the notes in circulation consisted entirely of sterling. The oil boom greatly increased the level of wages, particularly those of clerical and skilled workers. This in turn led to a rise in prices and in the cost of living, the index of which had risen to 151 for Europeans (1955= 100) by October 1963. In 1964 a new cost of living index was introduced based on a survey carried out in Tripoli in 1962. The index (January 1964=100) stood at 138 for September 1970.

An Industrial Development Corporation was created in 1963 with a capital of £L700,000 to help small industrial concerns. Apart from official or semi-official concerns of this kind, most Libyan banks developed as subsidiaries of foreign banks. However, amongst the first decrees issued by the Revolutionary Council was one which required 51 per cent of the capital of all banks operating in Libya to be owned by Libyans; the majority of directors, including the chairman, of each bank had to be Libyan citizens. The royal government had followed a similar policy without compulsion, and a number of foreign banks had accordingly already "Libyanized" themselves. In December 1970, all commercial banks were nationalized, with government

participation set at 51 per cent of bank shares. In addition, all foreign-held shares of banks entirely owned by Libyans continue to operate. There are now only five commercial banks in the country including one formed at the same time by the amalgamation of the former commercial section of the central bank with two small Libyan banks.

Until the country was assured of an income from oil, a large part of the government's ordinary expenditure was met by foreign aid. Thus in the year 1961-62, expenditure was estimated to amount to £L18 million, but of this £L3.6 million was met by grants from the United States. and a further £L3.2 million from the United Kingdom. In addition, a sum of £L11.3 million was granted to Libya by way of official aid for development, and the value of wheat and other cereals given to Libya by the United States Government was nearly £L2 million. Similarly, expenditure in the year 1962-63, estimated at fLig6 million, was met largely by foreign aid. The great growth of oil revenue has completely changed this situation; in recent years the government has been able to devote something like half of its income to development expenditure. After the 1967 Arab-Israeli war, the government agreed, in Khartoum in 1968 at a conference of Arab States, to contribute subsidies to Egypt, Jordan and Syria. That to Jordan was cut off in September 1970. For the year 1969-70 the government's total revenue was estimated to be £L426 million, of which £L356 million was expected to come from oil and £L70 million from ordinary revenue, the largest item being from customs and excise duties, £L38 million. Of the total, £L190 million was allocated to ordinary budgetary expenditure and £L145 million to development expenditure. The 1970-71 ordinary budget was £L183 million and that for development budgets increased substantially—the first to £L201 million (including a new item, £L20 million as assistance to public organizations) and the second to £L300 million.

The beginnings of a well-coordinated development programme started in 1960 when the World Bank, after its study of the range of Libya's problems, published its recommendations for the country's economic developnient which envisaged the launching of a five-year plan costing £L20 million. A plan was drafted by the Development Council (originally set up to coordinate various aid programmes). The government hardly had time to consider the programme before it became clear that the country was likely to derive very large revenues from the oil industry. The plan was accordingly redrafted several times; and in the summer of 1963 Parliament approved a plan calling for the spending of £L173 million over the period from 1963 to 1968. This plan also was overtaken by the growth of the oil revenue; in the fiscal year 1968-69 alone the allocation to development was put at £L123 million. In 1968 the government invited the International Bank for Reconstruction and Development to send a team of experts to Libya to advise them once more on industrial, agricultural and social development, no doubt in the light of the even greater oil revenues expected in the near future.

Details of a second five-year plan for the years 1969-74 were published in March 1969. It provided for total expenditure over the period of £LI,149 million, of which L177 million was allocated to public works, £L162 million to communications, £L150 million to agriculture, L128 million to housing and £L116 million to education After the 1969 revolution, the second five-year plan was put aside and development allocations were made on a yearly basis. The development budget for 1970-71 was set at £L200 million while that for 1971-72 was increased by 50 per cent to £L300 million. Of that total, £L50 million was set aside for agriculture, £L40 million each for public works and housing, and communications, £L32 million each for industry and local government and £L22 million B.S.-E. each for the petroleum industry.

THE CONSTITUTION

A new provisional constitution of 37 articles was proclaimed in December 1969. The following is a summary of its principal features:

ROADS

Libya is a democratic and free Arab Republic with sovereignty of the people who constitute part of the Arab nation and whose objective is comprehensive Arab unity.

The official religion of the state is Islam but the state guarantees religious freedom.

Supreme authority is vested in the Revolutionary Command Council which has power to appoint the Council of Ministers, to sign and modify treaties and to declare war. It retains power over the armed forces and the diplomatic corps.

All citizens are equal and the foundations of the country are built on family unity.

The state will aim to achieve socialism by means of

social justice which forbids all forms of exploitation. It will work towards the liberation of the national economy from every foreign influence, guiding it towards productivity and stability.

SHIPPING

The property of the state is also the property of the public. Private property cannot be exploited and is guaranteed by the state. It can only be expropriated as laid down by law.

Freedom of speech is guaranteed as long as it does not transgress the principles of the revolution.

The extradition of political prisoners is forbidden.

All titles, including those granted by the previous government, have been revoked.

Medical care is a guaranteed right for all citizens; education will be compulsory until the end of primary stage (now at the age of nine).

THE GOVERNMENT

REVOLUTIONARY COMMAND COUNCIL

Chairman: Col MUAHMAR At GADDAFT

Member: Maj Addie Selm Jaldod, Maj Bashir al Scoine Hawady, Maj Mikentar Andullah al Gerwy, Capt Madul, Monem al Taher et Hony, Capt Mustapa al Kinguny Maj ak Khowelidy al Hamid, Capt Muhamad Nehi Capt Awad ali Hama, Capt Abu Bark Yonis Jabes Capt Oma Abdullah al Mehetshy, It Muhammad Abu Barr al Quarri

Yugoslavia: Sharia Monte Pasubio (E); Ambassador: Mirko Ostovic.

Libya also has diplomatic relations with Albania, Argentina, Bulgaria, Chad, Ethiopia, Finland, Ghana, Guinea, Kuwait, Mauritania, Niger, Norway, Poland, Somalia, Venezuela and the Yemen Arab Republic.

PARLIAMENT

The former Senate and House of Representatives have been dissolved by the new military regime, and the provisional constitution issued in December 1969 made no mention of elections or a return to Parliamentary procedure. However, in January 1971 Col. Gaddali announced that a new Parliament would be appointed, not elected; no date was mentioned. The ban on political parties, which existed under the royal government, continues in force.

JUDICIAL SYSTEM

President of the Supreme Court: ALI MANSOUR.

The law of the Judicial System of 1954 established the following courts: the Federal Supreme Court, the Courts of Appeal, the Courts of First Instance and the Summary Courts. Sittings are in public, unless the court decides to hold them in camera in the interests of decency or public order. Judgment is in all cases given in public. The language of the courts is Arabic, but there is a translation office attached to each Court to help non-Arabic speaking parties, judges or lawyers.

The Supreme Court consists of a President and judges appointed by the Revolutionary Command Council. Final judgements passed by the Courts of Appeal or Courts of First Instance sitting as appellate courts are executable despite any relative objection for cassation before the Supreme Court.

Courts of Appeal exist in each of the three provinces, consisting of a President, Vice-President and three judges; judgments must be given by three judges. Each Court of Appeal includes a Court of Assize consisting of three judges.

Courts of First Instance are set up in the provinces, consisting of a President, Vice-President and a number of judges; judgment in these courts is given by one judge.

Summary Courts, composed of one judge, exist within the territorial jurisdiction of every Court of First Instance. Appeals from Summary Court judgments lie to Courts of First Instance sitting as appelate courts.

The People's Court is a special court set up by decree in October 1969. It will deal with any crimes the Revolutionary Command Council sees fit to refer to it, but will be particularly concerned with cases of political or administrative corruption.

RELIGION

Muslims The Libyan Arabs practically without exception follow Sunni Muslim rites

Chief Muffi of Libya Sheikh TAHER AHMED AL ZAWI Christians The Christ an community numbered about 35 000 mostly Italian Roman Cathol cs before the reduced by the departure of the Italians during 1970
The Roman Cathol c Cathedral in Tripoli was transformed into a mosque in November 1970

TOURISM

Ministry of Tourism Tripole

Tourism is so far largely undeveloped in Libys but major potential attractions include the superb Roman remains at Leptis Magna Sabratha and Cyrene the fine climate and hundreds of miles of unspoilt beaches

EDUCATION

One of the consequences of Libya's long history of successive foreign occupations and subjugation to foreign domination has been the extreme paucity of educational facilities for the indigenous peoples.

In 1921 only four Arab primary schools were in existence in Tripolitania, with a total of 611 pupils, and there was a similar lack of development in respect of native education in Cyrenaica.

During the following years some expansion took place, and by 1939 there were in Tripolitania 70 Italo-Arab primary schools with 6,884 Arab and 170 Italian pupils, 13 girls' trades schools with 944 pupils, a secondary school, and an arts and crafts school with 85 students. In addition, evening classes were started for adult Arab illiterates, and in 1928 Arabs were permitted to join Italian secondary schools. Small numbers of Arabs also gained admittance to Italian and Egyptian universities. Koranic schools also increased in numbers from 52 with 1,792 pupils in 1921 to 496 schools with 10,165 pupils in 1939. For Jews there were 19 primary schools (2,645 students), 2 trade secondary schools with 101 pupils, and 15 private schools catering for 1,939 pupils.

Up to the year 1939 the educational system for Arabs in Cyrenaica was similarly under-developed. At that time not more than 37 elementary schools were in existence with a total of 2,600 Arab pupils, and for Jews there were 5 elementary schools with 621 students.

Due to the destruction of towns and communications and to the evacuation of many people to the interior during the Second World War, education was badly disrupted, and at the end of the war there was a great demand for educational facilities. Secondary education was no longer limited to the few places permitted in Italian schools and Libyan schools of all grades rapidly increased in number. A steady expansion of all educational services occurred between 1943 and 1949, followed by a considerable acceleration after the United Nations' decision of November 21st, 1949.

The numbers attending kindergarten, primary and secondary schools increased from a total of 6,808 in 1943-44 to 250,000 (including 50,000 girls) in 1967. The numbers of teachers rose similarly, from 219 in 1943-44 to 8,500 in 1967. Elementary education is compulsory for children of both sexes, although a few children in the smallest most scattered villages in Fezzan do not yet attend school. There were 20 kindergarten, 1,040 primary and 21 secondary schools in 1967, when secondary pupils and technical students amounted to 5,000 and 1,060 respectively.

In 1958 the University of Libya opened in Benghazi with Faculties of Arts and Commerce, followed the next year by the Faculty of Science near Tripoli. Faculties of Law, Agriculture, Engineering and Teacher Training have since been added to the University, which had 231 teachers and 2,494 students in 1967-68.

The International Labour Organization runs a Technical and Clerical Training Centre in Tripoli with about 400 students. There are also in Tripolitania and Cyrenaica 4 Teacher Training Schools' (2 male and 2 female), with a total of 1,563 students and 131 teachers; 2 Agricultural training centres with 223 students; 4 Commerce and Industry Centres with 425 students; 1 Mechanical Engineering school with 22 students and a Handicraft Institute with 70 students. A Legal Studies centre was opened in Tripoli in 1957.

Tripoli College in Tripoli is a joint effort of the British Council in collaboration with the Libyan Government, with a 50 per cent Libyan intake, other places being open

to British and other foreigners. Paid education is for children up to 12 years. The British School, in Benghazi, for children up to 11 years, is run on the same basis. There are some 30 private Italian schools and institutes, and others are run by French, Greek and German authorities.

In addition some hundreds of students are studying in the United Kingdom, the United States, the United Arab Republic, Italy, Lebanon, Belgium and other countries.

Libya operates a national programme for the eradication of illiteracy. About 23,000 adults are currently studying in literacy classes conducted in the evening.

In the 1968-69 general budget, more than £L 35 million was allocated to education, representing about 17.5 per cent of the total expenditure. In addition, generous allocations were made for the five-year development plan which began in 1968-69.

LEARNED SOCIETIES

British Council: 16 Zawiat ad-Dahmani, Tripoli (P.O.B. 643); Rep. W. R. Keight, M.B.E.; library of 7,000 vols.; office at Benghazi P.O.B. 368; Regional Dir. B. Potter; library of 7,000 vols.

Morocco

PHYSICAL AND SOCIAL GEOGRAPHY

The Kungdom of Morocco is the westernmost of the three north African countries known to the Arabis as Djerna el Magbreb or "Island of the West" Intermediate in sure between Afgeria and Tunista, it coerpies some 172 coo square miles and has an extensive coastine facing both the Atlantie and the Mediterranean However, as a mountain ranges within its borders Morocco bas remanded relatively isolated from the rest of the Maghreb and has served as a refuge for descendants of the original Berber-speaking occupants of north-west Africa

The population in 1969 was estimated at 15,09 000 and the overall density was 70 per square mile About 35 per cent of the total are Berber-speaking peoples luving manily in mountain vallages while the Araber-speaking majority is concentrated in towns in the lowlands, particularly in Casablanca, which is the largest city in the Maghreb, in Marrakesh, the old sonthern capital, and in Rabat (population 370 000,) the modern administrative capital. There were some 450 000 Enropeans living in Morcoco before the country attained its independence from the French in 1956 but since then their number has greatly dimmissed.

The physical geography of Morocco is dominated by the highest and most sugged ranges in the Atlas Mountain system of north west Airlea. They are the result of a phase of mountain building that took place in the geologically recent Tertury era when sediments deposited beneath an ancestral Mediterranean See were uplitted, folded and frietined. The mountains remain geologically unstable and Morocco is liable to severe earthquakes, such as the appallingly destructive one that took place at the port of Ackadr as 1050.

In Morocco the Atlas Mountains form four distinct massis which are surrounded and partially separated by lowland plains and plateaux. In the north, in the zone of the formet Spansh Protestorate, the Rif Atlas comprise a rugged area of mountains that ness steeply from the Mediterraean coast to heights of over 1,200 feet. Their Immenton and sandstone ranges are difficult to penetrate and have functioned as an effective burner to east-west community of the state of the state of the state of the state of the state of the state of the state of the Arabo of Tetuan (population 11,200) and Tanger (population 166,220) at the north western end of the Rif chain

The Middle Atlas he immediately south of the Rif from which they are separated by the Col of Tara, a narrow gap which affords the only easy route between western Algeria and Atlantic Morocco They ruse to nearly 10,000 feet and format broad barrier between the two countries They also found a broad barrier between the two countries They also found the broad barrier between the two countries They also found the second that the second they are between the two second to be based on the barrier beautiful flows north-sait to the Mediterranean Much of the Middle Adlas consists of a limestone plateau dissected by river grows and capped here and there by volcance craters and express and capped here and there by volcance craters and the second the s

Southward the Middle Atlas chain merges into the High Atlas, the most formidable of the mountain massis, which rises to over 13,000 feet and is beavily snow-clad in winter The mountains are aligned in a chain from south-west to north-east and they rise precipitously from both the Atlantic lowland to the north and the desert plain of Saharan Morocco to the south The contrast between the two sides is very striking, the northero slopes are covered by forest and scrub while the southern slopes consist of bare sunbaked rock Eastward the chain loses height and continues into Algeria as the Saharan Atlas The central part of the massif is made up of resistant crystalline rocks which have been eroded by former glaciers and present streams into a wilderness of sharp peaks and steep-sided valleys, but elsewhere limestones and sandstones give rise to more subdued topography There are no easily accessible routes across the High Atlas but numerous mountain tracks make possible the exchange of goods by pack animal between Atlantic and Saharan Morocco A conenderable Berber population lives in the mountain valleys in compact, fortified villages

The Anti Atlas is the lowest and most southerly of the monntain massis Structurally it forms an elevated edge of the Saharan platform which was uplitted when the High Atlas were formed If consists Ingely of crystalline rocks and is pointed to the southers margin of the High rocks and is pointed to the southers margin of the High rocks and is pointed to the southers margin of the High rocks and is pointed to the Sahara on the rother sade of the chain care and the southers add of the chain barren slopes are trenched by gorges from which cultivated plain groves extend hiz egreen tongues on tunt the desert.

The only extensive area of lowland in Morocco stretches inlaud from the Atlantic coast and is enclosed on the north, east and south by the Rif. Middle and High Atlas It consists of the Gharb plan and the wide valley of the River Sebou in the north and of the plateaux and plains of the Miestat, the Tadla, the Rehaman, the Djehlet and the Haout farther south Most of the Arable speaking people of Morocco live in this region.

Northern and central Morocco experiences a "Mediterranean" type of climate, with warm wet winters and hot dry summers, but this gives way sonthward to semi arid and eventually to desert conditions In the Rif and the northern parts of the Middle Atlas mean annual rainfall exceeds 30 inches and the summer drought lasts only 3 months, but in the rest of the Middle Atlas, in the Hig Atlas and over the northern half of the Atlantic lowland rainfall is reduced to between 30 and 16 inches and the summer drought lasts for 4 months or more During the summer intensely hot winds from the Sahara, known as the Surocco or Chergui, occasionally cross the mountains and sweep across the lowland desiceating all that lies in their path Summer heat on the Atlantic coastal plain is tempered bowever by breezes that blow inland after they have been cooled over the cold waters of the Cananies current offshore

Over the southern half of the Atlantie lowland and the Anti Atlas semi and conditions prevail and rainfall decreases to between 16 and 8 inches a year It also becomes very variable and is generally insufficient for the regular cultivation of cereal crops without irrigation. East and south of the Atlas Mountains, which act as a barrier to rain-bearing winds from the Atlantic, rainfall is reduced still further and regular cultivation becomes entirely dependent on irrigation.

The chief contrast in the vegetation of Morocco is between the mountain massifs, which support forest or open woodland, and the surrounding lowlands which, when uncultivated, tend to be covered only by scrub growth of low, drought-resistant bushes. The natural vegetation has however been widely altered, and in many places actually destroyed, by excessive cutting, burning and grazing. This is particularly evident in the lowlands and on the lower mountain slopes where such scrub species as juniper, thuya, dwarf palm and gorse are common. There is little doubt that cork oak covered a large part of the Atlantic lowland but today only the "forest" of Mamora remains to suggest the former abundance of this valuable tree. The

middle and upper slopes of the mountains are often quite well wooded, with evergreen oak dominant at the lower and cedar at the higher elevations. The lowlands to east and south of the Atlas Mountains support distinctive types of steppe and desert vegetation in which esparto grass and the argan tree (which is unique to south-western Morocco) are conspicuous.

Since Morocco gained its independence territorial disputes have arisen with Algeria, Mauritania and the Spanish Sahara. During the period of French occupation the south-eastern frontier with Algeria was never precisely defined and the Moroccan government has claimed an area beyond it which extends into all three neighbouring countries. The claim is based on the fact that in medieatimes Moroccan rule was effective over much of the western Sahara and it is associated with the recent discovery of large iron ore deposits in the area together with the expectation of finding valuable reserves of oil.

D.R.H.

HISTORY

The Phoenicians and after them the Carthaginians established staging posts and trading factories on the coasts of Morocco. Still later, the Romans established in what is now northern Morocco the province of Mauritania Tingitana, the frontier or limes passing a little to the south of Rabat, Meknes and Fez. Muslim warriors raided into Morocco under Uqba b. Nafi in A.D. 684-85. It was not, however, until the first years of the eighth century that the Muslims began to bring Morocco under durable control, their forces, under Musa b. Nusair, reaching the Tafilalet and the Wadi Draa. The Berber tribesmen of Morocco rallied to the cause of Islam and had a large share in the Muslim conquest of Spain after A.D. 711. Religious ideas of a heterodox character-i.e., the ideas of the Khawarij, who constituted the first of the great schismatic movements inside Islam—won much support among the Berbers of Morocco. The spread of Kharijite beliefs, the fierce particularism of the Berbers and their refractoriness towards all forms of political control, led to a great rebellion in 739-40, which had as its chief consequence the fragmentation of Morocco into a number of small Muslim principalities.

It was Idris, a descendant of al-Hasan, the son of the Caliph Ali and of Fatima, the daughter of the Prophet Muhammad, who, fleeing westward after an unsuccessful revolt@against the Abbasid Caliph in Iraq, founded the first of the great Muslim dynasties ruling in Morocco. The Idrisid régime lasted from 788-89 to 985-86. Idris, the founder of the new state, died in 792-93, after reducing most of Morocco and also Tlemcen to obedience with the aid of the Berber tribesmen who had rallied to his cause on his arrival in the western Maghreb. His son, Idris II, founded Fez, the capital of the Idrisids and a notable centre of Muslim life and civilisation in the Maghreb. After the death of Idris II (d. 828-29) the régime fell into decline. Morocco now endured for some two hundred years a long period of internecine conflict, of tribal revolt and of warring principalities. At the same time it had to face external danger in the form of pressures from the Umayad Caliphate of Cordoba in Spain (at the apogee of its power and splendour in the reigns of Abd al-Rahman III (912-61) and al-Hakam II (961-76)) and also from the Fatimid Caliphate established and consolidated in Ifriqiya (i.e. modern Tunisia and eastern Algeria) during the years 908-69.

It was after this long period of turmoil and fragmentation that Morocco entered into the most splendid phase of its medieval history. There now arose, amongst Berbers of Sanhaja descent who followed a nomadic mode of life in the regions near the Senegal, the religious movement of the Almoravids (al-Murabitun-"people of the ribat", i.e., of a fortified abode devoted to spiritual retreat and also to jihad or war against the infidel). The chieftain of these Berbers, Yahya b. Ibrahim, brought back from Mecca Abd Allah b. Yasin to spread the true doctrine of Islam among his people. The Almoravids soon passed over from the pursuit of the ascetic life to war on behalf of the true faith. The tide of conquest in Morocco gathered momentum under the amir Abu Bakr and led, after his death, to the establishment of a vast Almoravid state in the time of Yusef b. Tashufin (d. 1106), who in 1062 founded Marrakesh and extended the domination of the Almoravids over all Morocco and much of Algeria. In 1086 he halted the southward advance of the Christian riconquista in Spain and then annexed the Muslim lands there to the Almoravid territories in North Africa. His successor Ali b. Yusuf (d. 1142) consolidated and maintained the empire, but thereafter the power of the Almoravids fell into a rapid decline. The Saharan nomads who had been the dynamic force behind the movement became absorbed, as it were, into the rich milieu of Andalusian Muslim civilization. Dynastic discord and incompetence among the Almoravid amirs hastened the collapse of the régime. The Christians in Spain took Saragossa in 1118 and began a new phase of their riconquista. And in the Atlas mountains of Morocco a new religious force was preparing to burst out over the Moroccan scene. Seven years later, in Morocco, the Almohads rose in revolt against the Almoravids and after 22 years of stubborn conflict took Marrakesh in 1147.

A religious leader, Muhammad b. Tumart (d. 1130), who had studied at Cordoba, Mecca and Baghdad, taught amongst the Masmuda Berbers of the High Atlas doctrines of a strict unitarian character and assumed for himself the designation of al-Mahdi, "the rightly guided one". Amongst the Masmuda he gathered around himself a nucleus of Berber adherents—the "Unitarians", i.e., al-Muwahhidun or Almohads. After the death of Ibn Tumart in 1130 one of his ardent disciples, a Berber of the Kumiya tribe named Abd al-Mumin, became the Khalifa of the Mahdi. Under the guidance of Abd al-Mumin (d. 1163) the Almohads took

Marrakesh in 14,7 and then in the years 1151–39 over ran the rest of Morocco and the North African lands as afe area as Tripolytania and Cyrenaca. The Almohads reached the summit of their splendour in the reign of al Mansius (1184–98), who brought Muslim Spain under Almohad control and checked the menant advance of the Christians at the battle of Alaccos (1796). Under the sufficient and the summary of the Christians of Spain at Las Navas de Tolosa (1212). Thereafter the Almohad empire began to decline The Hafsids made themselves independent in Hirquis (1215–59). Much of the Central Maghreb came under the control of the Abd al Wadd amirs ruling at Tlennon. At this same time a new Berber house—the Bermids, Fernandes, Person of the Christians of Spain at least the Christian of the Christian of Spain at house—the Bermids, Tenant of the Central Maghreb came under the control of the Abd al Wadd amirs ruling at Tlennon. At this same time a new Berber house—the Bermids, Fernandes, Person of the Christian of Spain and thus bringing to an end the last rerunants of Almohad rice.

THE MERINIDS

The Mennids, whose effective power lasted for about one hundred years came from eastern Morocco, over ran first the northern regions of Morocco and then the lands in the south Their attempts to reconstitute the empire of the Almohads met with no durable success. Revolt against their domination was not infrequent in the southern regions of Morocco Several campaigns undertaken to regain control of the eastern Maghreh brought no more than translent gains both Ifriquya and Tlemen escaping from their domination. Nor could the Merinida establish themselves in Spain although their interventions there did hinder the Christian riconquista and gave the Muslim state of Grenada enough time to consolidate its resources and thus gain the strength to resist the Christians until 1402 The decline of the Mennid regime saw the culminathe definition of the beginning tegins and the commu-tion of a process long ance in train Nomadic tribes of Arab origin—the Hilal and the Sulsym—penetrated into the Maghreb during the course of the 1xth and 1xth centures Other Badaw elements infiltrated through the northern reaches of the Sahara during the later phases of Almohadrole With the gradual disintegration of the Merinid state the Badawi tribes thrust westward through the Atlas mountains and penetrated into the heart lands of Morocco These Badawi invasions, although causing widespread disruption and confusion, contributed much to the arabisation of Morocco and the neighbouring lands During the years of Merinid decline, dynastic quarrels led to political disintegration, with the result that rival states came into being at Fez and Marrakesh Morocco, until 1465, was a prey to prolonged internal discords which ended at least in part only with the emergence of another regime of Zenata Berber origin-the Wattasid regime (1465-1549) The Wattasids had no long pre-emmence their failure to halt the progress of the Portuguese and the Spaniards, who had begun to establish themselves along the Atlantic and the Mediterranean shores of Morocco, being one of the main reasons for their rapid decline

THE LINE OF SHARIFS

A new movement of resistance to the intrusions of the Spanards and above all of the Portuguese (by 1500 the Basters of Ceuta, Tanger, Arcia, Agadur, Mazagan and Safo in the western coast of Morocco) was born amongst the religious confraterinities amongst the marabouts and the 'shorfa' (descendants of the Prophet) in Morocco who now led the Jihad, or war on behalf of the Muslim faith, against the Christians Out of this situation arose the Sandan régime, originating in a line of Sharis's from the region of the Wald Dras on the Saharan side of the Altis mountains. The Sandans took Fez in 1330 and Marakesh in 1348 Their pretige was due to their status as descended in 1348 Their pretige was due to their status as descended.

ants of the Prophet and to their success in driving the Portuguese from most of their possessions on the Atlantic littoral of Morocco-a success which culminated in their defeat of the Portuguese at the battle of Alcazarquivir in 1578 The most famous of the Sharifs Ahmad al Mansur (1578-1603) resisted the pressure of the Ottoman Turks on his eastern frontier with Algeria and in 1591 sent out a large expedition which seized Timbuktu and Goa on the Western Sudan, returning with rich plunder in the form of slaves and gold. Al Mansur, realising that his bouse had no strong tribal support such as earlier dynasties had owned, organised the Saadian regime on a new foundation (the Makhzan)-a system under which various Arah inbes enjoyed exemption from taxes in return for armed service to the state Much depended, in such a system, on the character of the Sultan If he were strong and able, all might be well, but in practice the political influence of the sultans tended to fluctuate in accordance with their skill or incompetence The tribal rivalries would break out anew, the endless tensions between the nomadic and the settled elements in the population became intensified, whenever the central government was weak or ill directed At such times the 'Bled as-Siba' (the areas of dissidence in particular the Atlas Mountains) set their tribal autonomes against the forces of the "Bled al Makhzan" (the controlled areas) The period of Saadian rule, which ended in 1668 was however, one of considerable prosperity for Morocco Sugar cane culture was encouraged, gold brought by caravan from the Sudan added to the resources of the regime, close commercial contact was made with the lands of southern and western Europe, amongst them England

Yet another wave of popular religious sentiment brought to power a new house-known under the designations Alawi, Hasani or Filali-which still reigns in Moroeco The Alawi Sharifs had their origin amongst the Berbers located in the cases of Tafilalet, i.e., Saharan Moroeco Under the guidance of the Alawi house Berher forces took Fez in 1644 and Marrakesh in 1668 The reigns of Rashid II (1664-72) and, above all, of Mulas Ismail (1672-1727) established the Alawa regime on a firm hasis and saw Morocco more thoroughly pacified and more solidly united than it was ever to be again until the time of the French occupation. Ismail used as one of his main instruments of rule a powerful corps of negro troops some stationed close to his capital, Meknes others established in a network of Qasbah's (fortresses) which covered most of the land. He also had at his command a strong force of Enropean renegades Among the main achievements of Mulas Ismail must be numbered the occupation, in 1684, of Tangier (English since 1662) and the capture, in 1689, of Larache (Spanish since 1610) Mulai Ismail concluded with France in 1682 a commercial agreement, which was confirmed later in 1787 precedence heing then accorded to the consuls of France over the consuls of all other nations

Mulai Ismail had managed to thrust back the pressure of the Sanhaja Berbers, who were beginning to move down from the Middle Atlas into the lowiand areas of Morocco His successors did not win the same degree of success, with the result that after the death of Ismail in 1747, a period of confusion neissed in Morocco until the rise of yet another able prince, the Sharif Mulammad h Abdallsh (1777-1790) Mulammad nomed Mogador in 1765 and (1777-1790) Mulammad nomed Mogador in 1765 and the prince from Mazagan in 1769 He intered into a pact of frequency from Mazagan in 1769 He intered into a pact of frequency from Mazagan in 1769. A burle period of conflict with Spans followed in 1774 but a new agreement was negotiated between Morocco and Spans in 1769.

Muhammad b Ahdallah and his immediate successors Mulai Sulaiman (1792-1822) and Milai Abd al Rahman (1822-99) made strenuous efforts to maintain the control of the central régume in the face of tribal dissidence and to ward off the possibilities of foreign intervention in the affairs of Morocco. The French conquest of Algiers in 1830 was bound, however, to have repercussions in Morocco. Mulai Abd al-Rahman gave assistance to Abd al-Qadir, the amir who led the Muslim resistance to France in Algeria during the years 1832-47. During the course of their campaigns against Abd al-Qadir the French met and defeated a Moroccan force at Wadi Isly in 1844.

A dispute over the limits of the Ceuta enclave, which was under Spanish rule, led in 1860 to a brief war between Morocco and Spain. Spanish troops under General O' Donnell defeated the Moroccans at Los Castillejos and seized Tetuan. A further engagement at Wadi Ras in March 1860 brought the war to a close. A peace settlement followed, under the terms of which the Ceuta enclave was enlarged and Spain was given indemnities amounting to 100 million pesetas. Morocco also granted to Spain a territorial enclave on the Atlantic coast opposite the Canaries (Santa Cruz de Mar Pequeña, now Ifni).

FRENCH RULE

France, with her hold on Algeria secure, began to turn her eyes towards the Western Maghreb—but the rivalries among the great Powers long hindered the establishment of a French protectorate over Morocco. In April 1904, however, Great Britain agreed to recognise the preeminence of French interests in Morocco in return for a similar recognition of English interests in Egypt. A convention between France and Spain in October 1904 assigned to Spain two zones of influence, one in northern and the other in southern Morocco. The Germans now sought to intervene in Moroccan affairs and at the conference of Algeciras in 1906 secured the adherence of the Great Powers to the economic "internationalisation" of Morocco. A sharp crisis in 1911, when the German gun-boat Panther appeared at Agadir, ended in a Franco-German settlement, the Germans now recognising Morocco as a French sphere of influence in return for territorial concessions in the Congo. In March 1912 Morocco became a Protectorate of France, with a French Resident-General empowered to direct foreign affairs, to control defence and also to introduce internal reforms. A new convention of 1912 between France and Spain revised the earlier agreement of 1904: Spain now received her zones of influence in Morocco (though somewhat diminished in extent)—but from France as the protecting power and not from the Sultan.

The first French Resident-General in Morocco was General Lyautey (1912–25). He established effective control, before 1914, over the plains and lower plateaux of Morocco from Fez to the Atlas mountains south of Marrakesh; then, before 1918, over the western Atlas, the Taza corridor connecting with Algeria and some areas of the northern highlands. French troops helped Spain to subdue the formidable rebellion (1921–26) of the Riff tribesmen under Abd al-Krim. This success meant the subjugation of the northern mountains and allowed the French to turn with unimpeded vigour to the reduction of the Middle Atlas and the Tafilalet—a task accomplished by 1934, when the pacification of the whole of Morocco could be regarded as complete.

It was at this time that nationalist sentiment began to make itself felt in Morocco. A "Comité d'Action Marocaine" now asked for a limitation of the protectorate. This "Comité" was dissolved in 1937, but nationalist propaganda continued against the French régime. Morocco rallied to the cause of France in 1939 and to the Free French movement in 1942. A Party of Independence (Istiqlal), formed in 1943, demanded full freedom for Morocco, with a constitutional form of government under Sultan Muhammad b. Yusuf, who supported the nationalist

movement. The Istiqlal, strong in the towns, did not find great favour at this time among the conservative tribesmen of Morocco, who tended to concentrate their resistance to reform on western lines around Thami al-Glawi, the Pasha of Marrakesh. The tensions between the new and the old ideas in Morocco became much sharper in 1953. Sultan Muhammad b. Yusuf had long adhered to the aims of the Istiqlal movement. He had fallen into disagreement with the French administration, refusing to issue dahirs (decrees) authorising various measures that the French desired to see in force. In May 1953 a number of Pashas and Caids, with al-Glawi, the Pasha of Marrakesh, at their head, asked for the removal of the Sultan. Berber tribesmen began to converge in force towards the main urban centres in Morocco such as Rabat, Casablanca and Fez. On August 20th, 1953, the Sultan agreed to go into exile in Europe, but not to abdicate. Muhammad b. Arafa, a prince of the Alawi house, was now recognised as Sultan. Attempts to assassinate him occurred in September 1953 at Rabat and again in March 1954 at Marrakesh. The situation continued to be tense, with outbreaks of violence occurring here and there throughout Morocco in 1954-55 and nationalist fervour running high.

INDEPENDENCE-1956

Sultan Muhammad b. Arafa renounced the throne and withdrew to Tangier in 1955. Muhammad b. Yusuf, on November 5th in that year, was recognised once more as the legitimate Sultan. A joint Franco-Moroccan declaration of March 2nd, 1956, stated that the Protectorate agreement of 1912 was obsolete and that the French government now recognised the independence of Morocco. A Protocol of the same date covered the transitional phase before new agreements between France and Morocco, still to be negotiated, could come into effect. The Sultan would now have full legislative powers in Morocco. Henceforward a High Commissioner was to represent France in the new state. France undertook also to aid Morocco with the organization of its armed forces and to assist in the re-assertion of Moroccan control over the zones of Spanish influence, the sole legal basis for which was the Franco-Spanish convention of 1912. On November 12th, 1956, Morocco became a member of the United Nations.

In August 1956 the Istiqlal proclaimed the need to abrogate the Convention of Algeciras (1906), which had "internationalised" the economic life of Morocco, and also to secure the withdrawal of all foreign troops from the land. An international conference met at Fedala, near Casablanca, in October 1956, to consider the future of Tangier, administered since 1912 under an international régime. In October 1956 Tangier was restored to Morocco. A Royal Charter of August 1957 maintained in general the former economic and financial system in force at Tangier, including a free money market, quota-free trade with foreign countries and a low level of taxation. In 1959 Tangier lost its special status and was integrated financially and economically with Morocco, but a Royal decree of January 1962 made it once more a free port. The Istiqlal, in 1956, had envisaged the creation of a "Great Morocco" which, according to a map published in July of that year, would include certain areas in South-West Algeria, the Spanish territories in North-West Africa and also Mauritania, together with the French Sudan (i.e., the Republic of Mali). The Sultan of Morocco and his government reiterated these claims in the years which followed the achievement of Moroccan independence. Moreover, in 1958, a number of personalities prominent in the political life of Mauritania, amongst them the Amir of Trarza in the extreme south-west of the Republic, withdrew to Morocco and found a welcome there. Morocco began in 1960 an intensive propaganda and diplomatic campaign

against Mauritania, asking in August 1950, that the question of Mauritania be placed ou the agenda of the United Nations The Political Committee of the UN General Assembly debated the question in November, but without agreeing to a formal resolution

The problem of the Spanish territories in North West Airica also came to the fore at this time During the course of a visit which Sultan Muhammad b Yusuf made to Madrid in April 1956, soon after Morocco became independent, Spain had recognised the independence of Morocco. renouncing also the northern zone of the protectorate assigned to ber in Morocco under the terms of the Franco-Spanish convention of 1912 One factor in the general situation was the existence in the western Sabara of irregular Moroccan forces (the "Armée de Libération du Grand Sahara) reputed to have some connection with the Istudal These irregular forces attacked the Spanish enclave of Iini in Southern Morocco on November 23rd, 1957, but after some stiff fighting had to withdraw in the first week of December During the first three months of 1958 pregular bands also raided into the Spanish territories of Sagua al Hamra and Rio de Oro and into the northern fringes of Mauritania. A combined Franco-Spanish operation cleared the irregulars from the Spanish territones and the adjacent lands by the beginning of March The Moroccan government had declared that it was not responsible for these incursions Negotiations between Morocco and Spain held at Cintra in Portugal, led in April 1958 to an agreement under which Spain, in accordance with the settlement reached in April 1956, relinquished to Morocco the southern zone of her former protectorate There was to be friction yet again between the two states in the summer of 1962, when Morocco extended her territorial limits from six to a distance of twelve miles from her shoreline-a move most unwelcome to Spanish fishermen who often visited Moroccan coastal waters.

In December 1965 The United Nations passed a resolution uring the government at Madrid to decelouse Ifin and the Spanish Sahara. However, no action was taken and in September 1967 the Toreign Minister of Morocco winted Midded to tail over the situation. The following December the UN adopted a new resolution, requesting December the UN adopted a new resolution, requesting organics a referendum in the Spanish Sahara under its ampices. The referendum would enable the local populations to have a voice in determining their own future. At the same time the UN Secretary-General was niged to appoint a special commission empowered to with the latest and examine the conditions prevailing their contractions of the contraction of the con

KING HASSAN II

On July 9th Prince Moulai Hassan was proclaimed ber to the throw and on Angust 15th 1997, Sulfan Minammad assumed the title of king The prince on the death of King Ahahamad in Jannary 1962, ascended the throne as Hassan II in November 1962 King Hassan announced deaths of a new constitution (later approved through a referendum held in December 1962) The Kingdom of Morroco was declared to be a sovereing state—monarchical, combitational, democratic and social in its form of government. The state religion was slam, the official language, maint. The state religion was slam, the official language, The state religion was slam, the official language, and the state of

members chosen by an electoral college consisting of members drawn from the provincial, prefectural and communal councils and one third selected by the trade unions and by the Chambers of Handicrafts, of Commerce and Industry and of Agriculture

An election for the House of Representatives (chosen under a system of single member constituencies) was held on May 17th, 1963 A 'Front for the Safeguarding of Constitutional Institutions' (FD IC)—a pro government organization—had been formed in March 1963. The main opposition came from the left wing: "National Yunon of Fopular forces." (IF R P) election from the control of the proposition of the property of t

Moroccan troops in July 1962, had entered the region south of Colomb-Béchar in Algeria—a region never officially demarkated. The Moroccan press also launched a strong campaign in support of the view that the Tindouf area in the extreme south west of Algeria should belong to Morocco-a claim of some importance, since the area contains large deposits of high grade (57 per cent) from ore and is believed to have also considerable resources of oil and natural gas King Hassan paid an official visit to Algeria in March 1963, as a result of which, in March and again in April, the two states entered into a number of agreements relating to technical, economic, administrative and cultural matters. Morocco and Algeria came into violent conflict, however, in October 1953 Morocco and France, in the Lalla Marnia agreement of 1845 had defined their common frontier from the coast southward to Teniet al-Sassi (a distance of some 80 miles), the frontier to the desert lands to the South remaining undemargated French forces from Algeria occupied the Touat oases, however, in 1899-1900 and also Colomb-Béchar in 1901. An agreement of 1912 defined the border from Teniet al Sassi to Colomb-Bechar (the "Varnier Line", which the Saltan of Morocco recognised in 1028 as the administrative and financial frontier) French forces from Algeria occupied the Tindouf area in 1934 Morocco now, in the years after the attainment of her independence, recognised as valid only the agreement of 1845

In September 1953 Morecean auxiliaries began to move southward from Tagonut into the region of Hasia Beild and Tinjonh about 250 miles south west of Colomb-Bichar and 250 miles north-east of Lindout There was sharp sighting in this area from October 8th to November 4th, 1953 With this mediation of Fresident Keita of Mais 1953 With this mediation of Fresident Keita of Mais Council of Toreign this Bamako on October 30th The Council of Toreign this Bamako on October 30th The Council of Toreign this December 21th, 1964 and 1954 Mais of the September 21th, 1964 and 1954 Mais on November 18th and created an arbitration commission, which thereafter (December 21d St. 1, 1965) to January 23rd 27th, 1964) held discussions at Abidjan in the Ivory Coast and at Bamako in Ball, Morocco and Algeria submitting evidence in Ball, Morocco and Algeria submitting evidence in Ball, Morocco and Maria should claims On February 20th, 1964, an agreement was reached on the enablishment of a deministrated zone.

It was announced at Rabat on February 2nd, 1964 that Morocco and the United Arab Republic would resume diplomatic relations with each other These relations had been suspended and the respective Ambassadors recalled in October 1963 as a result of U.A.R. support for Algeria in its border dispute with Morocco.

Relations between Morocco and Algeria improved in the course of 1964. April 1964 witnessed an exchange of prisoners taken in the late hostilities and also the withdrawal-its work completed-of the joint Mali-Ethiopia Commission. Morocco and Algeria resumed normal diplomatic relations in May 1964. At Tlemcen, also in May, a joint technical commission reached agreement on a number of points—on the re-opening of the common frontier (achieved on June 8th 1964), on freedom for the nationals of either state, expelled from the other, to return to their homes, on compensation for such expelled nationals, on the ending of all measures of detention directed against the citizens of either state as a result of the pre-existing dispute, and on further discussions designed to explore the possibilites of technical, economic, financial and administrative co-operation between the two countries. The Special Commission of Arbitration established by the O.A.U. in November 1963 continued its work in 1964, meeting on a number of occasions in Morocco and Algeria. A more amicable relation also became evident between Morocco and Mauritania. The Ministers of Information of these two states met at Cairo in July 1964 during the course of an African Summit Conference. An understanding was reached to bring an end to the 'war' of radio propaganda and criticism hitherto active between Morocco and Mauritania.

King Hassan II paid an official visit to Tunisia in December 1964—a visit which marked the full renewal, between Morocco and Tunisia, of the good relations disturbed when, in 1960, Tunisia had recognized the independence of Mauritania. Diplomatic relations between Morocco and Tunisia had been restored somewhat earlier in May 1964. The visit of King Hassan to Tunis had as its outcome the renewal of a number of conventions (first concluded in 1959) which related to judicial affairs, radio and television, cultural relations, transport, labour problems and public health. Two further agreements now negotiated took the form of a diplomatic and consular convention and of an establishment convention granting to the nationals of one state resident in the other equal rights with local citizens, save in the sphere of politics.

In May 1964 Morocco concluded with UNESCO an agreement to establish at Tangier an administrative training and research centre for Africans, with special emphasis on the training of senior personnel for development projects. At Tunis, on September 9th-October 1st 1964, the Economic Ministers of Morocco, Algeria, Tunisia and Libya agreed to create special relationships between their respective countries in the field of economic cooperation, trade exchanges and the co-ordination of tariff policies. A further conference at Tangier in November 1964 led to the formation of a permanent joint consultative committee served by an administrative secretariat and by a number of subordinate and specialized commissions (see separate Chapter in Part I). The Committee, which would meet at least once a quarter, under the chairmanship of each state in rotation, was to harmonize the development programmes of the participating countries. At this same time it was also resolved to establish an Industrial Studies Centre, with its headquarters at Tripoli and with the co-ordination of industrial projects in the member states as its main function. King Hassan, in December 1964, inaugurated the work of a Superior Council for National Promotion and Planning, a consultative organ of Government, as envisaged in the Constitution of Morocco. A three-year programme (1965-1967) now came under discussion, the main emphasis

resting on agriculture, on industrial projects connected with the preserving and treatment of agricultural products, on the training of civilian personnel and also on the advantages to be drawn from tourism.

The Moroccan Government envisaged in 1964 a development programmo for the mountainous Rif area, where the UN Food and Agricultural Organisation had completed a study project embracing agricultural re-education schemes, modernisation of farming methods through the use of instruction centres, and the adoption of techniques against soil erosion and for the improvement of crops, sheep and cattle. Progress was also made towards limiting the incidence of river flooding in northern Morocco through a system of barrage controls on the Sebou and Ouerrha rivers.

In August 1964 there was a re-organization of the Moroccan Government. The new Cabinet, under the leadership of M. Hajj Ahmad Bahnini, consisted in the main of members chosen from the Front for the Defence of Constitutional Institutions (FDIC). This re-organisation was interpreted as foreshadowing a possible attempt of King Hassan to broaden the basis of Government through close co-operation with members of the Opposition—i.e., with the Istiqlal and with the National Union of Popular Forces (UNFP). Istiqlal held its national congress at Casablanca on February 14th, 1965. M. Allal al-Fassi was re-elected as its President. The congress adopted resolutions for the conomic liberation of Morocco and for an increased measure of agrarian reform. It also asked for new political elections free from Government intervention.

INTERNAL DEVELOPMENTS 1965-71

The first half of 1965 was a time of political tension in Moroceo. A circular from the Minister of Education, issued in March 1965, imposed on all students over seventeen years of age some form of technical training. To numerous students it seemed that the circular might lead to their exclusion from professional and civil service careers. At Casablanca, on March 23rd, demonstrations amongst the students developed into riots with the rapid participation of workers, amongst whom rising prices and growing unemployment had caused much unrest. Police and troops had to fire on the demonstrators before order could be restored: over 100 people were estimated to have been killed.

At the opening of a new session of Parliament on May 3rd, 1965, the King made an appeal for the forma-tion of a government of National Union. He had begun discussions earlier, on April 20th, with the leaders of the political parties, with the Presidents of the two Chambers of the Parliament and also with prominent political figures. The King proposed a programme of development for Morocco-a programme which emphasized the need for industrial advance with the aid of foreign capital, the introduction of measures designed to encourage investment, the stabilization of the cost of living and the limitation of the birth-rate. Amongst the reforms now put forward was the suggestion that the Government should take over all lands granted by former Sultans to the various tribes, dedicated as religious endowments, or owned formerly by the French Government and by French colonists, and share them out amongst the peasant population, the beneficiaries receiving in addition financial and technical assistance from the state. There were proposals, too, for administrative reform: the Civil Service would be recruited through a system of competitive examinations, and a special court, established under a law promulgated in April 1965, would sit in judgement on officials accused of corrupt practices.

The appeal of King Hassan II to the main political parties net with no pronounced success Dissensation continued ins de Parliament M Haji Ahmad Bahmat the Prime Minnetter resigned from the Democratia Socialist Party of which he was President on June 4th 1945 On June 7th King Manneth assumed find legislature and manufacture power within Morocco New elections at was stated would be held after the Constitution had been revised and submitted to a referendum On July 1st the Lung announced the nationalization of the caproft trade of circum fruit to Office Chirifien de Contrôle et al Experta from Together with the phosphate industry over 60 per cent of Moroccan export trade was now nationalized Further nationalization to 1966 and 1956.

In July 1967 King Hassan relinquished the post of Prime Minister to Dr Mohammed Benhima and in 1967 and 1968 there were eight major cabinet reshuffles Considerable student unrest continued in this period

1069 saw a gradual return to full political activity though still under royal direction Municipal and rural communal elections were held so Circher although these were beyorded by opposition parties and the successful candidates mostly stood as independents Following this Dr. Mchammed Benhima Finne Minister slates [vily 1969]. The properties of the properties of the properties and the properties at last held in July 1970 official figures claimed that over \$8 per cent of the voites were affirmative despite general opposition from the main political parties trade unions and student organizations. Elections for a new single chamber legislature were held in August Of the 240 members 90 were elected by direct surings 90 by local that 158 elected members were Independents 60 were of the government party Montement Populairs and 22 from opposition parties

In July 1971 there was an unsuccessful attempt by a section of the army to overthrow the lung and establish a republic The attempt was led by Gen Mohammed Medbouh Minister of the Royal Military Household and Col Muhammad Ababou Together with some 1 400 mintary cadets they attacked the hing's palace at Skhirate while he was celebrating his birthday with members of the government foreign diplomatic corps and many other guests Although the rebels at one point had captured the king and his ministers and controlled the radio station and the Interior Ministry they were soon overwhelmed Many of their own men apparently railied to the Ling while the rest of the army counter attacked quickly The revolt was suppressed in under 24 hours Over 150 of the rebels were killed in the fighting The King escaped nahart but some of his generals a minister and an ambas sador were among those killed and other guests were wounded The King later said that there had been foreign myolvement in the abortive coup which be described as Libyan-style A lew hours after the revolt had begun the Libyan Government had alerted its armed lorces to be ready to defend the Moroccan revolution between the two countries were later severed The coup attempt appears to have been engineered by right wing army officers angered by the King s too lement treatment of dissent on the left

FOREIGN RELATIONS 1968-70

In June 1966 Morocco signed two agreements with Yngoslavia—the one for joint participation in oil prospect ing the other for the exploitation of potash deposits Oil exploration has not so far been promising Some oil (about 100 000 tons a year) is available at two small fields—at Sidi Rhafen and at Harisha Morocco also made with Yagoslavia in 1966 arrangements for the working of some potastic copper lead and zinc resonces.

During 1966-67 Morocco viewed with nnease the arrival in Algeria of Soviet planes guns and tanks The Moroccan government felt that the flow of arms into Algeria was creating a serious military imbalance in North Africa Some of the new equipment which Algeria had received from the USSR had been sent so it was said to the western areas of Algeria where the Tindouf region was still a matter of dispute between Morocco and Algeria In November 1966 Morocco acquired from the U.S.A a number of military jets which formed a counterpoise to Soviet planes known to have reached Algeria The King visited the United States in February 1967 Reports current at the time intimated that the USA, was prepared to make available arms worth some 15 million dollars in order to strengthen the defences of Morocco In March 1967 King Hassan neged Algeria to discontinue its military programme and to enter into negotiations with Morocco or else to accept the suggestion that a United Nations disarmament commission should visit Morocco and Algeria.

In the Arab-Israeli war in June 1957 the Moroccan government gave voice to its support of the Arabs and Zonzi cause but did not community in 1918 to 1958 the fighting After the Arab defeat brief outcomes in 1918 to 1918 the position of the Arab defeat brief outcomes in 1918 to 1918 the monotonial way to 1918

In October 1969; the Moroccan government usured an agreement with the USA which would make available to ber some 34 million dollars of economic and In February 1968 Herr Birandt the Federal German Fore gn Minuter vasted Rabat for talks Among matters discussed were a number of economic projects which it is hoped with a manufacture of the seconomic projects which it is hoped with himself vasted Iran and April 1968 in order to discuss the seconomic so-operation.

One principal event of the undisturbed political scene since the Palestino war was the Spanish surrender of the small coastal enclave of Ifm Spain's possession of Ifm Ceuta Mehila and the Spanish Sahara to the south of Morocco has long been a cause of friction between the two countries the Moroccan Government has made much of the apparent inconsistency between the Spanish campaign against Gibraltar and Spain's determined retention of its African colonies Ifni held by Spain since 1860 is a poor territory with little obvious economic or strategic potential and its Spanish population is small It might well have been handed over before but for Moroccan insistence on negotiating on the other territories. Ceuta and Mehlla are Spanish populated and rich phosphate deposits have been discovered in the Sahara so a voluntary Spanish surrender of these colonies appears unlikely Morocco officially took over Ifni on June 30th 1969

Moroccan diplomacy activeved several notable successes in the 1959-70 per of Robat was host to both the Islamuc aumunt conference held in September 1969 following the fire at the Al Agas mosque in Jerusalem and to the fifth Arab sammit conference in December 1969 Morocco did did to the conference in December 1969 Morocco did did not participate in the besidence in September and the conference in September was to lead to the dropping of her claim to that country

later in the year. Full diplomatic recognition and an exchange of ambassadors followed in January 1970; in June 1970, a treaty of solidarity, good neighbourliness and co-operation was signed between the two countries. Relations with France improved following the general pattern in the Arab world, and the diplomatic missions in Paris and Rabat were returned to full ambassadorial status for the first time since the Ben Barka affair in 1966. Relations were further improved with the visit to Morocco by the French Foreign Minister, M. Schumann in December

1970. As a result of talks, a Franco-Moroccan intergovernmental commission was set up, to meet at least once a year.

In May 1970 final agreement was reached in the frontier dispute with Algeria. A joint commission will map out a delineation maintaining the boundaries of the colonial period. The disputed region of Gara-Djebilet, rich in iron ore deposits, thus becomes the property of Algeria, but Morocco will have a share in a joint company to be established to exploit these deposits.

V.J.P.

ECONOMIC SURVEY

Morocco is endowed with a number of assets. The country has a congenial climate, varied soils with good agricultural potential and important mineral resources. There is an emerging industrial sector, a small, but growing managerial class and the beginnings of an industrial force. The economic infrastructure (transport, communications, electric energy) is at an advanced stage. The beauty of the country and its climate offer opportunitics for the growth of tourism. However, the movement out of the country of capital and trained personnel in the period immediately before and after independence was a severe setback to economic growth, and the G.N.P. fell to 8.530 million dirhams in 1959. This was followed by an extremely poor harvest in 1961, although thanks to favourable capital movements, growth was more satisfactory in 1962, when the gross national product reached 10,650 million dirhams. This improvement continued in the period 1963-69, when the G.N.P. rose at an annual average rate of 3.9 per cent in real terms to 16,110 million dirhams in the latter year. Of the major total sectors of production, only mining and industry grew faster than the national average in 1968-69 (by 4.3 per cent and 4.3 per cent a year respectively). Agricultural production rose by less than I per cent annually over this period, as did the activity in the various service sectors while construction and public works showed a decline.

The problems that Morocco has had to face are familiar ones for those countries called "underdeveloped"—a fast-rising population (3-3.2 per cent per annum), nourished for the most part by an out-of-date agricultural system, and to a considerable extent dependent on foreign capital for financing any substantial increase in the country's productive capacity. National income per capita is relatively low at 1,060 dirhams. The King himself once stated that Morocco is a rich country with poor people. The wealth of the country is most unequally distributed between the landowners and the small number of urban industrialists and merchants on the one hand and the rural masses and small but growing urban proletariat on the other.

The share of G.N.P. devoted to investments is about 13 per cent, a low level by world standards. Unemployment is a serious problem; it is estimated that 40 per cent of the youth between the ages of 20 and 30 are unemployed. A substantial trade deficit has been built up and deficits continue, requiring to be balanced by foreign loans and aid. A Development Plan for the years 1960-64 had to be abandoned because its target for investment proved overambitious and its target of a 6 per cent increase in Gross Domestic Product proved an unrealizable objective. A Development Plan for the period 1965-67 was adopted, its primary objective consisting of ensuring an output growth rate higher than the population growth rate, thus permitting per capita incomes to rise and living standards to improve.

A new Five Year Plan (1968-72) has now been adopted. It calls for expenditures of \$998 million over the five year

period and aims to achieve an annual growth rate of 5 per cent by 1973. The development plan concentrates on agriculture and related industries, mineral resources, tourism, health, education and technical training programmes. The first full year (1969) of the plan was a good one for the Moroccan economy. The country's gross domestic product rose at the target rate of 5 per cent, while total investment rose by 10 per cent and retail prices increased by only 3 per cent. The only major cloud on the horizon was the flood damage experienced in Morocco in early 1970. It is estimated that about 150,000 hectares of land were under water and unfit for agriculture. Of this 15,000 hectares were sugar-beet fields, 44,000 hectares cercals, 15,500 liectares potatoes and other crops and 5,000 liectares citrus fruit. The loss of 15,000 hectares of sugar-bect land is expected to halt production in the sugar refineries and force the government to use hard currency to import sugar from abroad to replace the loss of local output. The 5,000 hectares of citrus land will probably have to be completely replaced. The serious nature of this damage is readily appreciated when it is realized that Morocco's economic prosperity in the near future depends to a considerable extent on the successful execution of the ambitious agricultural projects envisaged in the new development plan. If successful, these projects would greatly reduce imports of foodstuffs, thus saving valuable foreign exchange, relieve the unemployment problem, which is serious, and improve the purchasing power of the rural population, thereby increasing the market for the products of new and expanding industries.

Morocco also has a great need for investment, and it must receive the assistance of private industry, as well as of foreign governments and international agencies, in helping it to expand its assets and to use them to best advantage. The country has features which should help considerably towards its development, including a convenient geographical position, considerable natural resources, an excellent communications system and a booming tourist industry. The number of tourists entering Morocco has shot up by almost one-quarter in the last three years to total 716,367 in 1969. The official target of 1 million visitors to Morocco by 1972 appears realistic.

AGRICULTURE AND FISHERIES

Agriculture is the key to the economy of Morocco. Three-quarters of Morocco's population of 15 million people live in the countryside, and 65 per cent of the active labour force is engaged in agriculture, livestock-raising and fishing. Thus agriculture provides the means of livelihood of the majority of the population, supplies about 90 per cent of the country's domestic food requirements and in the region of 50 per cent of the country's total merchandise exports. The agricultural sector contributed 21 per cent of the gross domestic product in 1968.

Changing climatic conditions cause substantial year-toyear variations in agricultural output. In years with

bumper harvests such as 1958 the contribution of agra culture to the gross domestic product rises to over 30 per cent whereas in years with particularly poor crops such as 1961 the corresponding contribution is in the region of 20 per cent The principal crops are cereals especially wheat and barley beans and chickpeas and other legumens canary seed, cumin and corrander lioseed olives almonds and citrus fruits Esparto grass is put to several uses including the manufacture of vegetable borsehair and is exported for paper making Recently vast areas of esparto grass have been brought into economic use by the establishment of a pulp industry based on this grass and on the eucalyptus tree Forest resources almost entirely in the patrimony of the state include cork (covering approxi mately 310 000 hectares) cedar argon oak and various comilers Tura wood is exported for tanning The pro-duction of wine is important 1 751 000 hectolitres being produced in 1967-68 half as much as in 1966-67 Since 1067 as a result of difficulties in the sale of wine par ticularly in sales to France till then the largest chent Morocco has been looking for other wine markets and reducing the area of its vineyards by converting them to orange groves Out of the 75 000 hectares formerly devoted to vineyards only 59 000 hectares were used for this type or production in 1969 and production sagged sharply to 700 000 tens in that year Morocco now expects that France will be forced by its own bad harvest to make wine purchases from abroad tocluding most of the Moroccan harvest of 1969 and the stocks of 400 000 hectolitres beld over from previous years. In the opening of an annual quota of I million bectolitres of Moroccan wine France agreed to huy 100 000 hectolitres at prices similar to those at which French production is purchased and 400 000 hectolitres at less favourable conditions which are still good enough to attract Moroccan producers Of the remaining 600 000 hectolitres 120 000 hectolitres may be sold to French overseas territories 200 000 hectolitres on the local Moroccan market and 170 000 hectolitres may be processed into other products such as vinegar There were in 1966 29 million cattle 15 million sheep and 78 million goats Pasture is often thin the quality of herds is poor and stock numbers are declining. The country is largely self sufficient in foodstuffs. The main foods it needs to import are sugar dairy products and wheat (hard wheat is exported and soft wheat is imported) Agri cultural produce and products derived therefrom accounted in 1968 for 56 per cent of all exports Exports of citrus in 1969 brought in 389 million dirhams. Oranges provided the hulk of this figure and fied their most important markets in France West Germany the USSR and the Netherlands Exported tomatoes at 146 million dirhams were more important than wine valued at 60 million d thams in 1969 Morocco is the world's second largest citrus fruit exporter after Spain exporting 550 000 tons of its annual output of 700 000 tons of oranges After the treaty with the EEC hecomes valid in 1969 Moroccan citrus fruit will be liable to a duty of only 4 per cent in Common Market countries as against the present rate of 20 per cent in all EEC countries except France where it is duty free Morocco does not only export citrus fruits but also fruit juice. The industry is still in its early stages, and the 38 ooo tons of fruit which were processed in 1965-66 has risen rapidly to 78 000 tons in 1968-69 Nearly 18 million litres and 2 600 tons of concentrate baye been exported mainly to the USA Brazil and South Africa

Fishing is a valuable industry. The total catch in 1968 was 219 920 methot cons of which sardines amounted to 167 643 tons. The main fishing ports are Safi in the southern part of Morocco and Agadir, there is also some activity at Essaoura and Casabinaca Lattle fish some activity at Essaoura and Casabinaca Lattle fish processing is very important and exported in 1968 in Fish processing is very important and exported in 1969 Fish processing is very important and exported in 1969 were

valued at 124 million dirhams (mostly sardines with some tinnsy fish and mackerel) Moroccan sardines have been known for many years on the world market for their flavour and high quality There are also substantial exports of fish meal and other products for use as fertilizers and animal foodstuffs

The agricultural scene is a dual one on the one side a system of holdings inherited from and in many cases still owned by European farmers with an emphasis on cash and export crops and on the other the Muslim farmers who are much less prosperous and who raise crops mainly for their own consumption. The traditional arable farming comprises See ooo to 1 000 000 boldings covering approximately 4 million hectares and is characterised hy the small size of the holdings the legal complexity of rights governing their tenure low productivity and the pre-dominance of cereals and stock raising. Not all animal hushandry is carried on hy Moroceans 15 per cent of the 1960 ammal census was owned by Europeans Irrigation plans have not made great headway due to the conserva tism of the farmers and the complexity of the legal situation (much of farming and grazing land is owned by the state tribes and religious communities—individual ownership formalised by title deeds is still relatively unusual but is spreading) Cereals are grown on more than So per cent of the cultivated land 1968 was a particularly good year for Moroccan agriculture Climatic conditions were favourable and the Ministry of Agriculture made great efforts to improve fields Over 30 000 hectares were treated with fertilizer The cereals harvest (50 million quintals) and the clive harvest (300 000 tons) were double the size of the 1967 harvests Exports of citrus fruits at 610 000 tons increased by 20 per cent compared with the 1966-67 season Wheat output in 1967-68 totalled 2 550 000 tons compared with 1 300 000 tons in 1066-67

Morocco produced 21 700 tons of untreated cotton in 1969—70 compared with 19 100 tons in 1968-69. These figures confirm the gradual recover; in cotton production aithough they are still far below the official forecasts of 42 000 tons in 1970—91. Over half of Morocco 2 cotton is exported to Western Europe 22 per cent to India and 23 per cent to Eastern Europe the remaining 10 per cent is used in Moroccan industry.

Operation Labour "was initiated as port of the 1918 59 Development Flam to teach the peasants to modernize their production methods hot the excellent to modernize of skilled Trench personnel after independence sabotaged the programme It was calculated in 1955 that only about 275 000 hectares owned by Moroccans were entilivated with the said of any machinery 9 foo tractors and 3 000 combine harvesters were in operation at the end of 1953. The confusionance of this general situation means that there is continual migration to the towns Experts stress that an essential preface to agricultural improvement is the government but had to concentrate on the profilers of the contrast of the powerty of the Muslim sector of agricultural with the comparative prosperity of European farming.

At the time of independence the extent of Enopean holdings was put at just over one million heaters divided into 5 900 holdings. These produced about 25 per cent of the gross value of all crops 80 per cent of all vince and citrus fruits 33 per cent of vegetables and 15 per cent of certair. Thus there has been continual pressure for a takeover of fand owned by Europeans. This resulted in takeover of fand owned by Europeans This resulted in takeover of fand owned by Europeans This resulted in takeover of the contract of th

As a result of government action and the conclusion of production contracts, two industrial crops of outstanding importance for the Moroccan economy are in vigorous expansion, namely, sugar beet and cotton. Each occupied more than 11,500 hectares in 1965, whereas together they covered barely 2,000 hectares 10 years previously. Market gardening, especially in irrigated areas yields more income per unit of land than most other crops. Output of tomatocs and miscellaneous green vegetables is fairly constant, but potato output fluctuates widely from one year to another. A year of weak prices can be disastrous for small market gardeners, who are nevertheless unwilling to submit to output controls. Output of pulses especially broad beans and chick peas has expanded fairly steadily since 1957. In 1966, 32,000 tons of chick peas and 96,000 tons of broad beans were produced.

A total sum of £63 million is due to be spent on dams and irrigation networks under the five-year plan with a view to increasing the irrigated area by 158,000 hectares. The first of a series of six dams to be built during the plan period was completed in November 1970. The dam, located at Ait Aidel on the River Tersaout will increase the irrigated area in the Haouz plain from 3,000 to 30,000 hectares. A hydro electric plant with a capacity of 60 million kilowatt-hours a year is also planned.

MINING AND INDUSTRY

Although the occupation of Morocco by France and Spain was inspired largely by political motives characteristic of the time, the material profits of the Protectorate then established derived mainly from the rich mineral resources. Moreover, the fact that these countries already possessed mineral processing plants meant that the minerals in Moroeco were—and still are, for the most part—exported in a raw state. The most important mineral deposits are phosphates—Morocco is the second most important producer after the United States and the largest exporter in the world-and this represents about half the value of total production of minerals in Moroeco; 30,871 workers were employed in this industry in 1964. In addition, Morocco is the fourth largest world producer of cobalt and sixth among the manganese-producing countries. Morocco also possesses important deposits of lead and zinc and lesser resources of several other metals, including copper and tin. The chief phosphate deposits are at Khouribga and Youssoufia and are controlled by the state Office Chérifien des Phosphates (OCP). National consumption of phosphates, however, is very small at the moment and is coped for by a factory for superphosphates and hyper-phospliates in the Safi complex near Casablanca, which produces about 100,000 tons a year. At present, the total bulk of production is exported and provided 27.5 per cent of total Moroccan exports in 1966. The main clients are France, the U.K., Spain and the Benelux countries. Unlike many other mineral exporting countries the percentage of phosphate exports to total exports has steadily been rising; in 1962 exports were 430 million dirhams and in 1969 551 million. Output of phosphate rock was set at 10.7 million tons in 1969. A major development in 1968 was the inauguration of work on new deposits at Bcn Guerir near Marrakesh. The aim is to produce 10 million tons a year from open cast workings. The production target of the three mining centres is 13.5 million tons in 1971. This continued development of the country's phosphate deposits clearly offers enormous prospects for increased economic expansion.

Most of the other mineral products have not shown such a dynamic growth sinco independence as has phosphates. Iron is mined in Ait Amar and Uixan. Production reached 1,577,000 tons in 1960 but was only 820,000 tons in 1969. The lack of a steel industry within the country has

not encouraged high activity in this sector. Manganese is the chief dollar earner and output has generally reflected this fact with 130,576 tons being mined in 1969, about 35% of which are treated in the Sidi Marouf factory. Lead and zinc are often found together in deposits in Morocco, i.e. at Boukber, Touissit, Aouli and Mikbladen. The output of zinc has so far not repeated the total of 101,000 fons achieved in 1959. Production in 1962 and 1963 was just 57,900 tons in each year, and all this was exported unprocessed. Output improved considerably in 1964 reaching 80,971 tons and further impressive gains were registered in 1965 and 1966. In 1967 output fell slightly to 83,000 tons from 94,000 tons in 1966; this was followed by a further fall to 68,000 tons in 1968 and a slight improvement to 72,000 tons in 1969. About 30 per cent of lead production goes through the lead foundry at Oucd el Heimer. Production totalled 117,680 tons in 1969, and was a very valuable export commodity bringing Morocco 135 million dirhams in foreign earnings. Cobalt is also produced from Bou Azzer (14,097 tons in 1969), and copper (8,400 tons in 1967). The total value of exports of metalliferous minerals in 1969 was 266 million dirhams. Developments expected in the near future include a U.S.S.R. project to develop lead, zinc and silver deposits in the Great Atlas and also extensive copper ore prospecting in the Anti-Atlas area of South Morocco. This will be undertaken by Occidental Petroleum Inc. of Los Angeles, under an agreement signed with the Ministry of Industry and Mines in 1967. The Soviet Union has also agreed to build a 60 MW. anthracite-fired power station at Djerada by 1971. In 1967 the Moroccan Government bought out Spanish interests in Minas del Rif, the largest domestic iron ore deposit situated near Nador and Melilla on the Mediterranean Coast. The takeover came at a difficult period for the mine, in as much as any expansion or indeed maintenance of production is heavily dependent on considerable new investment, since available open-cast ores have diminished considerably and gallery mining will have to be undertaken. Already output has dropped sharply and is likely to continue to decline.

Morocco's mineral resources also provide it with energy through coal and small quantities of petroleum. The coal deposits are at Djerada south of Oujda. This was one of the most important concerns of the Spanish Protectorate, and in 1964 the government mining organization BRPM assumed a controlling interest in the company operating the Djerada mines. The theoretical production capacity of Djerada's anthracite mines is 600,000 tons per year but this has not been achieved since the end of the Protectorate, when in 1957 production was 521,000 tons. Since then output has sagged, amounting to 482,000 tons in 1967 and 451,000 tons in 1968. Any marked improvement in the situation depends largely on progress being made with the iron foundry and steel complex project; the original plans assumed that the foundry would need 160,000 tons of coal per year. To a certain extent the coal industry has been affected by the concentration in electricity projects on hydro-electricity at the expense of thermal generation. Thermal plants accounted for half of electricity production in 1953 but only for 10 per cent in 1965. In 1965, 1,158 million kW. were generated hydraulically and 123 million kW. thermically. This is a reflection of heavy investment in electric power and currently there is excess capacity; minimum production capacity (in the case of worst water conditions) was put at 1,200 million kWh. and this will be swelled by the coming into service of the Mekra-Klila dam. Total production was 1,695 kWh. in 1969. Production and distribution are state-controlled through Energie Electrique du Maroc; the frequency is 50 cycles per second. Petroleum exists in moderate quantities and a new find was made in 1962 at Sidi Rhalcm in the Essaouira region, but in spite of

prospecting in the Doukkala, Draa and Tarfaya regiona, no other important fields have been located Esos Leploration inc. started activity in 1967, on off shore permits south to Agrander Production has declined in recent years too coo tens in 1965 to 55,560 tens in 1969. All of time is refined in the country in a topping unit junity owned by the government agency, SAMIK, and the Italian oif fam, ENI, set up in 1967 at Mohammedia and in another refinery inherited from the French at Sidi Kacem However, a great part of the refineries' need for crude oil is statisfied by imports, and oil continues to be an expensive import item.

The Bureau of Mining Research and participation (BRPU) is undertaking large scale prospecting for hydrocarbons both alone and in association with private partners Encouraging results have been found by Esso in the province of Tartaya In early 1970 a team of Soviet tech neurons discovered a graph of the Soviet tech neuron described and the second companies. When Metal and Mining, and Nittetsu Alinning, have agreed to form a construm with the Moroccan Government and a French company (Omnium Nord Africain de France) to build a factory to process copper extracted from a mine 198 kilometries to the east at Casabiancy. The factory will have a carpactly to treat between 800 tons and 1,000 tent of the approach of the second production.

Several projects are proceeding for the exploitation of deposits of copper ores, fluorine and silver, and notably the Upper Moulaya lead rine mines to be opened up by Zeihdja with the BRP M

The mining industry has been placed on the list of industries which benefit under the Javetiment Code from a series of riscentives and advantages designed to promote private investments, according to a decree published in December 1969. Another decree virtually abolished the export tax on minerals by lowering it from 5 per cent advalorm to 6.5 per ent on 1700, animony, coball, man gazare, bayrine and fluorone ores, follers sentil head am is reduced on a variable scale related to world prices of these minerals.

Industry is perhaps the least stagmant sector of the economy and certainly promises the highest rate of growth in the immediate future. Even so, the extent of manufacturing is still relatively small, accounting for 17 per cent of GNP in 1968 The growth of manufacturing in Morocco (5 per cent a year on average during 1060-68) has been directed largely towards the light industries. Although the majority of the population has very little purchasing power, there is nevertheless a fairly large market for many consumer goods among the two to three million people who are better off Encouraged by government promotion, many new enterprises have been established to produce goods that formerly had to be imported An export orientated industry has also emerged during the past few years particularly in the field of food-processing. This consists mainly of fruit juice plants and canneries (fish and vegetables) as well as the edible oil industry. Of special importance for the domestic market are the flour milling sugar refining and tobacco processing industries Next to the food industries in importance are the textile and leather industries. A metal products industry is also well established, while in the chemical sector the most significant plants are a crude oil refinery which started production in 1962 and the Safi plant which processes Morocco's most important mineral phosphate. The country's timber industry is also expanding rapidly. In 1967 timber production met 52 per cent of the country's needs Output was apportioned as follows 172,000 tons of alfa grass 32,000

tons of rosemary, 6,700 tons of cork oak and 7,000 tons of brier root All the cork oal output was exported, as well as 36 000 tons of nlfa grass and 46,000 tons of cellulose Several foreign companies have recently boosted the country's manufacturing capacity, General Tire and Rubber Co of Morocco started manufacture in 1961, the SAMIRIENI refinery came on stream in 1962 and the Société Marocaine de Constructions Automobiles late 1062. Investment in sugar mills is vital and the second national refinery built by CEKOP at Sidi Slimane in the Rharb valley, began production in June 1963 An additional sugar refinery was opened in 1966 and two more are planned to reduce Morocco's dependence on imports. The Safi chemical complex, opened in June 1965, produces sulphuric acid (1,300 tons daily), phosphorie acid (450 tons daily), triple super-phosphates (200 000 tons a year), and diammonium phosphate (150,000 tons a year) This helps to supply the country's great need for agricultural fertilizers Morocco is at present heavily dependent on imported textiles but considerable investment (some of it from a World Bank loan granted in 1962) has been made in mercasing the expacity of the local industry, especially in cotton cloth Industrialization plans for the inture include two new sugar refineries and projects for the manufacture of vegetable oil, PVC, iron and steel, artificial fibres and fertilizer Increased demand for fertilizers will justify the installation of a second chemical plant for the processing of ammonium phosphate Particularly worthy of note is Morocco's long term sugar plan which is designed to promote national sngar production in such a way as to bring about a steady reduction in imports According to the plan an integrated sugar industry will be formed, through the addition of sugar works to the existing refinences and through the development of sugar crops, notably beet, which is already being grown successfully in some parts of the country At present, Morocco has ten sugar units of which four are refineries with an annual production of 400 000 tons of refined sugar equivalent to 40 per cent of the country's requirements Construction started in early 1971 on a new sugar works in the province of Nador The unit will have a productive capacity of 30 000 tons of crude sugar per year, which should cover the requirements of Fastern Morocco

About half of the industrial labour force is concentrated in Casabanca. There is substantial unemployment and after the state of the st

The conditions under which Morocco's industrial development surged forward ance the war explain to some extent the present structure of industry. Some sections such as fish canning and edible oils and fish are over equipped, while others are under equipped. The textile industry, for instance, meets only about 35 per cent ol local demand. Otten the equipment is not fully integrated or balanced, for example, extiles have had an imbalance between spinning and weaving capacity. Recent trends indicate that many of these problems are being faced. The latest modern equipment is being installed to improve quality and increase profits.

"Moroccanization" of the country's business is taking place gradually In April 1971 King Hassan II outlined that several hundred private enterprises owned by foreigners in Morocco would be gradually transferred to Moroccan control. The King has taken particular care to point out that Moroccanization does not mean nationalization. Instead he sees it as the negotiated transfer of private enterprises from foreign to Moroccan hands with adequate immunitics paid. Hence, it is anticipated that there will be no sweeping legislation, no arbitrary nor unilateral action but a ficxible and gradual process. The first targets will be importers of branded products and insurance companies. Since Moroccanization is to be applied to the "tertiary sector" (sales and services) it is presumed that banks and other businesses, such as shipping and forwarding agents, will also be taken over eventually. Ten of the sixteen foreign banks in Moroccan shareholders, two of them majority holdings.

TRADE AND PAYMENTS

Morocco runs a deficit in her trade with other countries but in 1961-65 the trade gap was narrowed from an exceptional level of 526 million registered in 1961 to 108 million dirhams in 1965. In the 1962-64 period exports have grown at an average annual rate of almost 6 per cent while import controls have kept the average growth of imports to less than 1 per cent a year. However, since 1965 the trend has been less favourable, with exports rising modestly from 2,176 million dirhams in 1965 to 2,455 million dirhams in 1969 and imports rising rapidly from 2,291 million dirhams in 1965 to 2,844 million dirhams in 1969; in the latter year the trade deficit stood at 389 million dirliams. The chief reason for the disappointing export results was a levelling-off in phosphate rock exports, valued at 544 million dirhams in 1969, almost 25 per cent of total exports. The export effort otherwise depends on agricultural produce such as citrus fruit, tinned fish, wine, fresh tomatoes, and on metalliferous ores. France still remains by far the largest customer and sales to France recovered satisfactorily from the heavy fall noted in the immediate post-independence period. The amount of Morocco's exports absorbed by France rose to 43 per cent in 1968. In contrast France's share of the Moroccan market has fallen steadily from 46 per cent in 1959 to 37 per cent in 1968. Morocco still retains her quotas in the French market and recently the prospects for an increase in her wine exports improved as a result of a French decision to upgrade the classification of Moroccan wincs. Federal Germany, the U.S.A. and Britain follow France in trading importance, but at a considerable distance.

The Moroccan government has entered into negotiations with the European Economic Community (EEC), in order to obtain an agreement securing preferred access to this large market for its exports. As yet, it is still uncertain when these negotiations are likely to be completed. If an agreement is reached it is generally expected that the concessions Morocco will get will be partly offset by lost preferences in the French market. The EEC has received similar requests from Tunisia and Algeria, and is currently endeavouring to work out an arrangement, under which a co-ordinated economic development policy between these three Maghreb countries will be stimulated. Traditionally there has been very little economic contact between the three countries. But recognition of the benefits, which all of them could obtain from closer co-operation is emerging, and a series of conferences has been held to define scope and method. Two-way trade between Morocco and the Maghreb states in 1966 was 92 million dirhams. In the same year the countries of the EEC accounted for 53 per cent of Morocco's imports (1,253 million dirhams) and 60 per cent of her exports (1,402 million dirhams). Thus, Morocco experienced a trade surplus with the EEC of 149 million dirhams in 1966, compared with a deficit of

188 million dirhams in the previous year. The government is also interested in agreements which minimize the use of foreign currency reserves, and this is the reason why much of her trade is with the Communist world. Two-way trade with Communist China was 109 million dirhams in 1967 and with the U.S.S.R. was 174 million dirhams. In this connection, it is interesting to note that a contract was signed in December 1968 between Morocco and the U.S.S.R., under which 25,000 tons of oranges have been supplied to Russia in January and February 1969. This will be followed by other consignments reaching a total of between 100,000 and 125,000 tons in the course of 1969. A draft agreement for partial association between Morocco and the EEC was formulated in November 1968. According to the terms of the agreement the EEC will import the following Moroccan products duty free: olive oil, petroleum products, fruits, vegetables and certain industrial products. In return, Morocco will lower import duties on some goods produced in EEC countries (viz. radio equipment, refrigerators, glassware, beer, cars, photographic film, plastic and chocolate). The EEC had originally asked for a tariff reduction of about 30 per cent but will now be satisfied with much less. A treaty of Economic Co-operation and Trade was signed by Algeria and Morocco in January 1969. In the economic sphere the treaty provides for the following: Moroccan importers will lift any trade restrictions on Algerian products and reciprocal arrangements will be made by Algerian importers; agreement was reached on the possibility of inter-connecting the electrical network of both countries.

The export trade has been increasingly more state controlled as government economic policy is determined to some extent by the deterioration of the country's financial position. The export of phosphates is controlled by the Office Chérifien des Phosphates and in July 1965 the export of citrus fruit, other agricultural products, fish products and handicraft goods were taken out of private hands and put under the control of the Office Chérifien de Contrôle d'Exportation, created for the purpose. Thus the office controls 35 per cent of the nation's exports.

With a deficit on merchandise trade, a decline in revenues from foreign military bases, and an increasing tendency to repatriate income on foreign investment, heavy deficits were incurred on the balance of payments in the period 1961-64. Alarmed by the rapid exhaustion of foreign exchange revenues in 1964, the government took a series of measures designed to curb imports and restrict the unofficial trade in dirham notes. Tourist allowances in foreign exchange for Moroccans going abroad were cut from 500 dirhams to 200 dirhams per adult per trip, and the amount they were allowed to take out of the country was reduced from 300 dirhams to 150 dirhams. Furthermore, the entitlement of foreign technical assistants to transfer home part of the salary was reduced from once a month to once every six months. Although the latter restriction was, probably the most important in terms of immediate foreign exchange saving, the effect was essentially temporary. With the growing crisis, a further sct of measures was introduced in October 1964. Tourist allowances in foreign exchange were completely eliminated. The government declared a general suspension of all imports until more specific restrictions could be defined. Subsequently, a list of authorized imports, on which a 25 per cent prior deposit had to be lodged before the goods can be brought into the country, was issued. Annual quotas were also fixed on certain goods, mostly consumer goods, in order to limit imports.

These measure brought about an improvement in the balance of payments in the course of 1965, and by the end of the year the government was able to remove the import bar, replacing it with a system of selective increases in

import duties on certain categories. The strengthening in the balance of payments continued in 1966 despite the adverse trade balance, but the unfavourable payments balance rose to for million dirhams in 1967 and 180 million dirhams in 1968 The root reasons were large purchases of wheat and flour and increased imports of capital goods required for the acceleration of industrial development The upshot was a new set of austerity measures introduced by the government in late 1968 direct taxation on incomes in excess of 6 000 dirhams a year was raised from 3n per cent to 36 per cent, corporate taxation was raised from 40 per cent to 44 per cent on profits above 500,000 dirhams a year, and to 48 per cent on profits above 2 million dirhams a year, a surtax was imposed on luxury vehicles In view of the balance of payments crisis, Morocco has been compelled to draw 50 million dollars from the International Monetary Fund (IMF), under a stand by agreement it can draw a further 27 million dollars from the IMF in 1969 Further austerity measures-restrictions on credit facilities-have been introduced, together with a campaign for the diversification of trade and the npening up of new markets. The government is also hoping to find more foreign aid to finance its development programme

Moroccan foreign currency reserves fell from \$171 million in 1960 to \$19 million in 1964 and now stand at \$128 million (Jannary 1971), gold reserves currently stand at \$207 million and Morocco's SDR quota is valued at \$12 million.

TRAHSPORT AND COMMUNICATIONS

Morocco has a well developed transport system, due largely to the work of the French during the protectorate, the primary and secondary road system is essentially complete and well constructed the railroad fulfils specifie economic functions the ports serve the hunterland statisfactorily the artifield network meets the requirements of civil aviation.

The road network of Morocco is well developed. All the major sections of the country are connected by some 52,000 km of roadways, of which 17,200 km are modern paved roads, a further 5,400 constructed earth roads of good viability and 29 400 kilometres of tracks of varying viability The paved highway system is the second longest in Africa (after South Africa), and most of the roads are built to design standards well in advance of the traffic which they are currently carrying Many of these were built by the French army, primarily for strategic purposes In 1958 there were over 278 000 vehicles in Morocco, more than twice as much as in 1957 The tonnage transported on Morocean roads in 1968 was 5 5 million tons. In October 1970 an agreement was concluded between the French Renault company and the Moroccan Government on the establishment of an assembly factory near Casablanca The factory will employ about 500 people and initial pro duction will be 12 500 vehicles per day A similar agreement was signed with the French Peugeot company in the same month These decisions are the result of the growing demand for private and commercial vehicles in Morocco

The country's railway network is good, there being 180 km of 1 track 70 km of which are electrified Traction is by electric or diesel [cosmotives Casablance is connected by a track that continues through Algeria to Tans The only into that shows a profit bowever, is the western network of the Compagne des Chemina de Per da Marco (C.F.M.), which stretches from Sidi Kacem to Casablanca, Marrakesh and Saf This is almost entirely in account of the large shipments of minerals particularly phosphates. The latter accounted for 10 5 million to not out 16 2 million tons of all Moroccan Irrept hauled in 1968, and provided nearly 40 per cent of income

Morocco entrently has eleven commercial airfields of which seven are served by regular schedules. The major traffic is international, the most important international aurports are Casablanca-Anfa and Casablanca-Nouacenr and Rabat Sale Moroccan air transport, both domestic and international is now mainly provided by Royal Air Maroc, which is an autonomous corporation in which the Moroccan State has a 68 85 per cent share and Air France 17 53 per cent the remainder being beld either by private transportation companies or by individuals. The number of passengers carried has shown a steady upward trend numbering 602 592 in 1968 compared with only 437 000 in 1967 It is interesting to note that a new air company Royal Air-Inter, which will only serve Morocco's internal lines hitherto largely covered by Air France came into operation in April 1970 Royal Air Maroc has an 80 per cent holding in the company During 1969 the country's internal airlines were used by 35 652 passengers 22 per cent more than in 1968

On its 2 000 km of coastline, Morocco has a dozen ports of greatly varying importance. The coast is generally not very favorrable for port installations since it is par-ticularly tocky and the Atlantic swell is one of the strongest in the world In 1967, the ports bandled over 15 million tons of cargo Of this total over 60 per cent went through Casablanea about 20 per cent through San, and in the region of 7 per cent through Mohammedia. The volume of cargo slupped has increased by between 3 and 4 per cent annually in recent years (although with considerable variations between the different ports) In fact, Morocco has two major phosphate ports Casablance and Safi Under the Five-Year Plan for 1968-72, Safi is to be expanded At present it can receive tankers of 45 000 tons from which oil is purified 6 kilometres to the SAMIR refinery. It is now anticipated that after the installation of new pipelines the port will be able to receive and pump oil from tankers of 60 000 tons Mohammedia is the principal petroleum port at present Maritime passenger traffic is concentrated at Tangier and Casablanca, with most at the former being based on the ferry service across the Straits of Gibraltar, and most at the latter on cruise visitors on relatively short stays Studies commenced in March 1970 for a bridge link between Morocco and Gibraltar The studies are being undertaken by the Moroccan government and an international specialist.

FINANCE AND FOREIGN AID

The present financial and monetary organization of the country was laid in 1958 when the Banque de l'Itat de Maroc, which had functioned us the central bank since 1906, was replaced by the Banque du Maroc. At the same time, the Banque National pour Développement Economique and the Banque National du Commerce Estrieur began operations. The Banque du Maroc is being progressively deprived of the operations which it handled as a private bank before the takeover, It exerts strict control over the utornal business of the private banks.

The year 1958 also marked the breaking off of mosetary union with the Franc rone, later in October the Moreccan franc, which had been valued higher than the devalued French franc since 1957 was itself devalued to 506 per US dollar and replaced by a new monetary unit, the drhams, equivalent to 100 old Moreccan france The drhams, equivalent to 100 old Moreccan france The other moments of the origin exchange, however, 13 not the remaindable of the origin exchange, however, 13 not the remaindable of the franching of the origin exchange of the company of Franching Offices desc flowages, a department of the Munusry of France Control of transfers to the France room was imposed as a measure to stop the outflow of capital I na attempt to strengthen the financial resources of the country in face of the absence same 1957 of French and, Morecco received

U.S. aid (the U.S. had strategic air bases at Kenira, etc.). In recent years French aid has been restored while the U.S. bases have been phased out. Even so the financial state of the nation is far from buoyant. A basic weakness in the payments situation has been the repatriation of foreign capital since independence. However, Morocco felt able to avoid following the French devaluation in August 1969. The par value of the Moroccan dirham remains that agreed with the Fund in October 1959 (5.06 dirhams per U.S. dollar).

Domestic investment reached a peak in the early 1950's and subsequently declined. Only recently has this started to show signs of recovery, reflecting increased government borrowing. In 1969 gross fixed capital formation was 2.17 billion dirhams, only 14 per cent of gross national product.

In order to increase investment the Fonds National d'Investissements was set up in 1962; companies are charged a percentage (3 per cent to 15 per cent) on their profits which is invested by the Fonds in productive enterprises but, if the company invests double the percentage liable to be paid to the Fonds, the levy is not collected. Part of the 1959 austerity measures included up-scaling of import duties, the encouragement of importing from areas outside the Franc zone and the introduction of a deposit system against imports. Measures taken in 1964 included the increase of taxes on private and company earnings and increases in stamp, registration, alcohol and petrol taxes. The austerity measures in government services meant a cut back in foreign personnel employed (an estimated elimination of 11,000 foreign personnel), limitation of the number of government cars and the postponement of nonessential investment projects. These measures have helped reduce the budget deficit from 366 million dirhams in 1964 to 150 million dirhams in

The budget deficits are not necessarily to be blamed on the taxation system since in many ways the French left behind a very efficient taxation system. Its modification in 1962 improved it further. However increases in personal and company taxation in 1964 have done nothing to alleviate the low level of internal demand. As in most other countries at a similar stage of economic development customs duties and indirect taxes each contribute more to budget income than direct taxation. About a third of budget income is on capital account and derives from profits from the exploitation of the mines run by the Office Chérifien des Phosphates, treasury bills and advances from the banks, and foreign grants and loans. To an increasing extent the banking system has been financing the deficits; in 1965 total advances outstanding to the Government were almost four times that in 1958. However, in another way, things are better recently following the restoration of French aid in 1962; this aid begin usually tied to a certain extent to the purchase of French goods. Combined with certain difficulties on the production side budgetary troubles have produced inflationary symptoms. The Government has pledged general wage rises when the cost of living index increases by more than 6 per cent, but this pledge has only partly been fulfilled and on occasions when the Government has tried to implement it, it has met with protests involving civil disturbances. The cost of living rose by an average of almost 6 per cent a year in the 1962-64 period, but during 1965-69 the trend moderated to an average annual rate of 3 per cent. Foreign aid in 1969 totalled 682 million dirhams compared with 651 million dirhams in 1966. The agreement for financial co-operation between France and Morocco was not renewed in 1967. The World Bank granted Morocco a loan of \$15 million in November 1968 to foster the development of tourism in the country.

DEVELOPMENT PLANS

Slack domestic investment, weak private foreign interest, and persistent budget deficiting have left Morocco with scant capital resources. The direct victim of this situation has been the 1960-1964 Development Plan which early in 1963 was abandoned. Previous development plans had been directed towards infrastructure projects (1949-52), agricultural and welfare problems (1953-57) and direct productive investment (1958-59). Under the 1960-64 Plan investment was hoped to rise from 11 per cent of gross domestic product in 1960 to 22 per cent in 1965. In fact these investment targets were far from realized. Actual investment in 1968 was still only 13 per cent of gross national product. Some circles have blamed the failure of the development plans on the inadequacies of the official institutions that deal with development programmes and investment projects. These organizations are: the Bureau d'Études et de Participations Industrielles (BEPI), which successfully handled the SAMIR/ENI refinery and the Firestone and General Tyre Co. deals; the Bureau de Recherches et de Participations Minières (BRPM); the Banque National de Developpement Économique; and the Government departments of the Ministry of Economic Affairs together with three Under Secretaries of State.

In the Three Year Plan (1965-67), priority was given to agriculture, tourism, professional training and industry. A total of 60,000 million francs was spent on agriculture as a whole and of this 26,000 million francs were spent on dams alone, as these are vital both for irrigation and for the production of electricity.

The results of the three year plan have been encouraging, if not spectacular. The Five Year Plan launched in 1968 has the same development features as the previous plan. Total expenditure is estimated at \$998 million over the five year period and the plan aims at an increase of 5 per cent per annum in gross national product until 1973. About 40 per cent of total planned expenditure will come from abroad and will include substantial loans from the World Bank. In recent years much financial assistance has been given to Morocco by the United States, the Federal Republic of Germany, Italy, Belgium, Kuwait and the U.S.S.R.

Agriculture will receive nearly half the total expenditure and the building of dams will be pursued on a large scale. Tourism is again high on the priority list and the government will not only build accommodation but it will also grant privileges to investors and develop tourist areas. În 1968, almost 600,000 tourists arrived in Morocco, compared with 500,000 tourists in the previous year. Income from tourists was f_{35} million in 1968, and is rising at an annual rate of 20 per cent. Education will be geared to the future needs of the nation's economy and a considerable part of the \$58 million allotted to this sphere will be spent on providing scientific and technical training. As yet industry represents only a small part of the country's production and hence the plan lays great stress on the various branches of industrial, and local craftsmanship, and mining activities. Attempts will be made to improve the quality of products, especially agricultural ones, by creating those industries for which its natural resources and strong labour force give the country the best chances on the international market. Other significant expenditures proposed in the plan are in the fields of transport and communications, health and housing. Four hundred new villages are to be built in Morocco under the 1968-72 plan, with the help of the World Food Programme of the United Nations. The project is the biggest to be financed by the UN (which will contribute \$13 million) and their first in the housing field. The Moroccan government has earmarked about \$20 million for the project. The villages will be built in the irrigated areas north of the Atlas mountain chain.

J.I.E.M.

THE CONSTITUTION

A Constitution drawn up by King Hassan II was approved by national referendum and promulgated in December 1962. The principal provisions are as follows:

Preamble: The Kingdom of Morocco, a sovereign Moslem State, shall be a part of the Great Maghreb. As an African State one of its aims shall be the realization of African unity. It will adhere to the principles, rights and obligations of those international organizations of which it is a member and will work for the preservation of peace and security in the world.

General Principles: Morocco shall be a constitutional, democratic and social monarchy. Sovereignty shall pertain to the nation and be exercised directly by means of the referendum and indirectly by the constitutional institutions. All Moroccans shall be equal before the law, and all adults shall enjoy equal political rights including the franchise. Freedoms of movement, opinion and speech and the right of assembly shall be guaranteed.

The Monarchy: The Crown of Morocco and its attendant consitutional rights shall be hereditary in the line of H.M. King Hassan II. The King shall have the power to appoint and dismiss the Prime Minister and Cabinet Ministers and shall preside over the Cabinet. He shall promulgate legislation passed by parliament and have the power to dissolve the House of Representatives. The Sovereign is the Commander-in-Chief of the Armed Forces; makes appointments to civil and military posts; appoints Ambassadors; signs and ratifies Treaties; presides over the Council for National Development Planning and the Supreme Judiciary Council; and exercises the right of pardon.

Parliament: Parliament shall comprise the House of Representatives and the House of Councillors. Members of the House of Representatives shall be elected for four years by universal direct suffrage. One-third of the House of Councillors shall be elected by the Chambers of Agri-

culture, Commerce and Industry, and Handicrafts as well as by trade unions, two-thirds by an electoral college of members of prefectural and provincial assemblies and communal councils. The Councillors' term of office shall be six years, half the Councillors being re-elected every three years. Parliament shall pass legislation; authorise any declaration of war; and approve any extension beyond thirty days of a state of emergency.

Government: The Government shall be responsible to the King and the House of Representatives, the Prime Minister being empowered to initiate legislation and to exercise statutory powers except where these are reserved to the King.

Relations between the Authorities: The King may request further consideration of legislation by parliament before giving his assent; submit proposed legislation to a referendum by decree; and dissolve the House of Representatives if a Bill rejected by parliament is approved by referendum. He may also dissolve the House of Representatives by decree, but the succeeding House may not be dissolved within a year of its election. The House of Representatives may defeat the Government either by refusing a vote of confidence moved by the Prime Minister or by passing a censure motion; either eventuality shall involve the Government's collective resignation.

Judiciary: The Judiciary shall be independent. Judges shall be appointed on the recommendation of the Supreme Council of the Judiciary presided over by the King.

In July 1970 a new constitution was adopted by an overwhelming majority in a national referendum. The new Parliament will have a single chamber of 240 members, half elected by universal suffrage, one-quarter by an electoral college of municipal councillors, the other quarter being selected members of chambers of commerce and agriculture. The powers of the monarch were also strengthened.

THE GOVERNMENT

HEAD OF THE STATE

H.M. KING HASSAN II (accession February 26th, 1961).

CABINET

(July 1971; new government being formed at time of going to press: see Late Information at beginning of book)

JUDICIAL SYSTEM

The Sugrams Court (Marks et Aula) created on Septem ber 27th 1957 is responsible for the interpretation of the law and regulates the jurisprudence of the courts and tra bunals of the Kingdom. The Supreme Court sits at Rabat and is divided into four Chambers

- 1 Civil Chamber (the First Chamber)
- t Criminal Chamber
- t Administrative Chamber
- 1 Social Chamber

First President Annen BARNING

Afterney General BRAHIM KEDDARA

There are 20 Counsellors and 4 General Advocates

Three Courts of Appeal The Fex Court covers all the former Southern Zone and comprises

- 8 Regional Tribunals
- 11 Sadad Tribunals and branch chambers. The Court of Appeal at Marrakesh comprises 4 Regional Tribunals

 - 7 Sadad Tribunals and branch chambers

The Court of Appeal at Casablanca comprises

- 4 Regional Tribunals
- 9 Sadad Tribunals and branch chambers

The Endad Tribunals pass judgment without possibility of appeal in personal civil and commercial cases involving up to 300 dirhams These tribunals also pass judgment subject to appeal before the Regional Tribunals in the same cases up to goo dirhams in disputes related to the personal and successional statutes of Morocean Muslims and Jews and m penal cases involving misdemeanours or infringements of the law

The Regional Tribunals deal with appeals against judg ments made by the Sadad Tribunals and pass judgment in the first and last resort in cases of personal property of 900 to 1 200 dirhams or property producing a yield of up to 80 dirhams. The Regional Tribunals also pass judgment subject to appeal before the Court of Appeal in actions brought against public administrations in administrative affairs and in cases of minor offences in penal matters

Labour Tribunals settle by means of conculation dis putes arising from rental contracts or services between employers and employees engaged in private industry There are 14 labour tribunals in the Kingdom

A special court was created in 1965 in Rabat to deal with corruption among public officials.

RELIGION

MUSLIMS

Most Moroccans are Muslims.

EDUCATION

Since Independence in 1936 Morocco has had to tackle, a number of educational problems a youthful and fast growing population an urgent need for skilled workers and structure as growing the problems and structure and the structure of the struct

Education is divided between the Government the French University and Cultural Mission the Jewis Universal Alliance and private bodies although the great majority of instruction is given in Government schools. In 1908-69 there were vell over a million children being increased Instruction is given in Arabic for the first two years in Arabic and French for the following three-year English is the first additional language Lxams and syllabuses have been standardised. Approximately one quarter of the teachers are French. A decree of November 1908 made education compulsory for children between the control of the control

At the secondary level there were in 1969 287 000

students approximately a quarter of whom were at technical echools. Recruitment of teachers abroad has increased the number of qualified staff to 7000 but this number is still inadequate. Instruction is mainly given in French more than half the teachers being French but some institutions are making experimental use of Arab cas the language of instruction.

Higher education has a long history in Morocco The Islamic University of Al Garavyin at Fee relebrated its eleventh centenary in 1959-60. Nev universities have been started at Robat and Vlarakketh wil ere a rid funnersitier is planned for 1 500 students A Medical faculty and a Science faculty as well as an Art's Chool and an Digmening College are now operating in Rabat In addition there are advanced school of administration excelled yand agriculture. An African Centre for Research into Administrative Training for Development opened in Tangerie in 1964. This Training for Development opened in Tangerie in 1964. The Committee of the UN Economic Commission for Africa Art Led Of 1969 some 300 Moroccans were studying a broad.

Adult education is being tackled through the means of radio simplified type a special newspaper for the newly literate and the co-operation of every teacher in the country Another notable development in recent years has been the increasing attention given to education for guls There are now a number of mixed and girls schools and the proportion is growing yearly.

Oman

GEOGRAPHY

The Sultanate of Muscat and Ornan lies at the extreme south-east of the Araban pennsula and is flanked by the Trucal States on the extreme North by the Robert States on the extreme North by the Robert States on the extreme North North and the North and the States on the extreme North North and West, and by Southern Younn on the extreme North Its sea coast extends for a loon rules and its total area (including Dhofar) as about 10,000 square miles, but the frontier with Saudi Arabia in particular is very ill-defined The whole area is known as Oman (of which Muscat is the capital), apart from the province of Dhofar which hes south-west of Ornan The population of the whole area is estimated at over \$50,000, and the population of Muscat as estimated.

At Muscat the mean annual randall is 3 9.4 inches and the average mean temperature varies between 69°F and 90°F Although most of the region is and the coastal plan of fatina, East of the Jabal Akhdar nidge is relatively fertile, and so also is the fertile plateau of Dhofar, in the south west The Rub although the Mah in Oman a northern border, is a ramless nn-relieved wilderness of shifting sand, too difficult for occupation even by nomade.

HISTORY

Little is known about Muscat and Oman before the capture of its capital by the Portuguese in 1508 For almost 150 years the Portuguese maintained a naval station and factory at Muscat controlling trade in the Persian Gulf area. In 1650 they were turned out by local Arabs. The importance and power of the Arab rulers of Muscat were gradually extended, until by 1730 they had conquered the Portuguese settlements in East Africa, including Mogadishu Mombasa and the islands of Mafia and Zanzibar A brief Iranian invasion (1741-43) was terminated by the rise of the present dynasty, the Al Abu Saids On the death of Saiyid Said in 1856, his territories were divided between his two sons through British mediation an agreement being concluded in 1861 under which Zanzibar agreed to pay an annual subsidy of 86,400 rupees to Muscat, and each ruler was accorded the style of Sultan

In the early 10th century Muscat was the man market for slaves imported from the Last African territories of the Sultan of Muscat and Oman but in 1822 Britain concluded a treaty with the Sultan of Muscat prohibiting the trade in slaves between his dominions and those of Christian countries Towards the end of the 19th century the European powers showed increased interest in the Persañ Gulf area generally, and in 1891 the Sultan of Muscat signed an agreement with the British not to dispose of any of his territory. But this agreement is now regarded as shaving lapsed The only formal link between Muscat.

and Oman and the United Kingdom has been the successive Treaties of Friendship and Commerce signed in 1891. 1993 and 1951. The Treaty of 1951 provides for reciprocal treatment of each other's nationals and most favoured nation treatment be tween the signatories for commerce, shipping and taxation. The Treaty ran for 15 years from May 1952 and now continues in effect unless notice to terminate is given by either party. The Sultan of Muscat relies on the United Kingdom to help hum resist aggression on the United Kingdom to help hum resist aggression.

In 1990 the Sultan agreed to allow the Imam bis traditional measure of temporal authority over his Omani followers the Sultana's sovereignty over the entire Sultanate remaining unimpaired. The Imam resided at Nizwa and most of the tithes of the interior acknowledged his authority as far north as Ibri, at the southern end of the Dibahrah He also had some influence over the tribes in the desert west of the mountains.

For many years there was harmony between successive Sultans and their vassals, which was demonstrated when the Imam Muhammad Kahili provided multary assistance to his overlord in 1952 when the Sultan was assembling an army for the purpose of expelling Saudi Araban intruders from the Buriam Casis But after the death of the old Imam in 1954 bis successor. Ghalib sought, with foreign help, to establish a separate principality. In December 1955, forces under the Sultan's control entered the main inhabited centres of Oman without resistance. The former Imam was allowed by the Sultan to refire to his village but his hrother, Talib, escaped to Saudi Araba and thence to Carro An 'Oman Imaniate' office was set up there and the cause of the Imam was supported by F. Egyptian propagands.

OMAN AND THE UN

When in the aimmer of 1957 Talib returned and established binnessel with followers in the mointain areas north west of Nixwa be was supported by Sulman bin Himyar. The Sultina ippealed for British belp in July and in August 1957 the end of the rising was announced, but fighting continued and the rebels were able to maintain themselves in the Jebel Akhdar until early 1959 when the Sultain a suthority was fully re-established (On September 4th 1958, the Soltan Of Muscat ceded to Pakistain in exchange for £3 million, the Persann Gulf port of Gwadur, which had been in Muscat chad for £50 years)

In October 1960 ten Arab countries secured the placing of the "question of Oman" on the agenda of the General Assembly of the United Nations, despite British objections A draft resolution calling for the 'independence of Oman" failed however, to secure the necessary majority in December 1961 A UN Commission of Inquiry led by the Swedish diplomat Mr H de Ribbing visited Muscat and Oman in May and June 1963 where they interviewed government.

officials, walis and tribal leaders. The Commission also interviewed the Imamate leaders in Cairo. Their report to the UN General Assembly, debated in the late autumn, refuted the Imamate charges of oppressive government and strong public feeling against the Sultan. But the Arab countries succeeded in obtaining sufficient support for the setting up of an ad hoc Committee to examine "the question of Oman". The Committee, composed of Afghanistan, Costa Rica, Nepal, Nigeria and Senegal, submitted its report to the General Assembly in October 1965. In December 1965 a resolution was adopted by the General Assembly which amongst other things considered that the colonial presence of the United Kingdom prevented the people from exercising their rights of selfdetermination and independence, called for the elimination of British domination in any form and invited the Special Committee on the Granting of Independence to Colonial Peoples to examine the situation further. The question has been raised again in the United Nations on several occasions, and since July 1970 has been complicated by the palace coup.

THE SULTANATE SINCE 1967

In the spring of 1968 there were reports that the Sultan was preparing to make a number of cooperative arrangements with Abu Dhabi, which might have helped to forge further links with the proposed Federation of Arab Emirates, which will lie on the country's northern border. This possible break in Oman's traditional isolation was perhaps caused by the announcement of the intended withdrawal of British forces from the Gulf by 1971, since these forces have helped to protect Sultan Said in the past. The R.A.F. retains staging posts at Salalah and on Masirah island, but Britain has no other troops stationed in the area. The Sultan's armed forces have British citizens serving under contract as officers, however, and the oil revenues have recently enabled the government to buy modern British arms including jet fighters.

By 1970 Sultan Said's government had come to be regarded as the most reactionary and isolationist in the area, if not the world—slavery was still common, and many mediaeval prohibitions were in force. The Sultan's refusal to use the oil revenues for any purpose other than the building up of his armed forces had particularly embarrassed Britain, the oil companies and most neighbouring states, and this attitude had provided ideal conditions for the rebellion in Dhofar province and elsewhere. On July 24th, 1970, the Sultan was deposed by a coup led by his son, Qabus bin Said, at the royal palace in Salalah; wounded in a brief skirmish, he was flown to a hospital in Britain after abdicating. Qabus, aged 28 and trained at Sandhurst, thus became Sultan to general acclaim both within the Sultanate and abroad, including support from the army; reports of British complicity in the coup were strongly denied by London. The new Sultan announced his intention to transform the country by using the oil revenues for development, following the example of the Gulf shiekhdoms to the north. He asked the rebels for their co-operation in developing the country, but only the Dhofar Liberation Front reacted favourably. The Popular Front for the Liberation of the Occupied Arabian Gulf (reported to control most of Dhofar, and to be receiving Chinese aid through the Yemen P.D.R.) and its ally the National Democratic Front for the Liberation of the Occupied Arabian Gulf appeared to think that the palace coup changed little.

In August "Muscat" was dropped from the title of the country, which became simply the "Sultanate of Oman". Sultan Qabus appointed his uncle, Tariq bin Taimour, as Prime Minister. Other ministerial appointments were made during August, and two Britons were named, one for the key post of Defence. At the same time three leading officials of the old régime were dismissed. Government policy is aimed at providing the basic social and economic infrastructure which the former Sultan was rigidly opposed to-housing, education, communications, health services, etc. In addition, restrictions on travel have been lifted, many prisoners released, and many Omani have returned from abroad. It is possible that political parties may be permitted soon, though communists would be disqualified.

Oman's desire for membership of the UN and Arab League, stated by the Prime Minister in August 1970, is likely to be frustrated for some time. Her dependence on Britain is the main drawback, and the UN Trusteeship Committee does not consider her a sovereign state. The Arab League has long recognized Imam Ghalib as the rightful ruler of Oman, and he reasserted his claim in April 1971. In addition, the Yemen P.D.R., which supports the P.F.L.O.A.G., has said it will oppose the membership of Sultan Qabus's government because of its relationship with Britain. Britain supplies arms and ammunition to the Oman Government and officers on secondment or contract. In January a new land and air offensive was launched against the rebels in Dhofar by the Omani army.

ECONOMY

Dhofar, in the south, the district around Nizwa and the Batina coastal plain in the north are the principal areas of cultivation. Cereal crops are grown for local consumption, while dates, pomegranates and limes are the chief export crops. Cattle breeding is extensively practised in the fertile province of Dhofar, and the Oman camel, bred in all parts of the country, is highly valued throughout Arabia. One of the most urgent problems facing the country is the shortage of water. If this can be overcome by exploiting and harnessing all available supplies, then there will be great possibilities of further agricultural development throughout the area. The Development Department, set up in 1959 and to which Britain contributes, includes in its programme agriculture, roads, health and education. Agricultural experimental stations have been set up at Nizwa and Sohar where research is being carried out on irrigation and fertilization techniques and on the cultivation under local conditions of improved varieties of wheat, sorghum, fruit, vegetables, pulses and cotton.

There are no local industries of any importance, but ou has been discovered in commercial quantities in Oman In 1937 the Petroleum Development (Oman) Lud a subsidiary of the Iraq Petroleum Co, was granted a 75 year ol concession extending over the whole area everyth the district of Dholar A concession covering Dhofar was granted in 1953 to Dholar Cities Service Petroleum Corporation, it expires in 25 years from the date of commercial production with option to general or another 25 years.

In 1964 Petroleum Development (Oman) Lid now a subadany of Royal Dutch Sell (with an 8 per cent an asubadany of Royal Dutch Sell (with an 8 per cent in the 1964). Compagnie Frinçaise des Pétroles (with the per cent) and Gulbenkam interests with their traditional 5 per cent announced that drilling had proved sufficient reserves for the company, to go mito commercial production. The production of oil began in 1967 (28 inillion tons) and expanded to 164 million tons in 1969 the route being by a pipeline through the Sumail gap to a headquarters and oil loading terminal at Mina al Fahul a lew miles to the west of Minsaca town. The principal olifields in production at present are (going north-east from the Saudi frontier) at 1 high Fahul and Nath The German Wintershall company heads a consortum exploring an offshore concession in the Galf of Oman

In January 1968 the Sultanate published a booklet explaning how the oil revenues are to be used. By mid 1970 extensive rede elopment of Museat was in hand electricity supplies piped drinking water, new port facilities and other amenities are to be introduced or greatly extended. Development has however proceeded slowly compared with the other affluent Gulf states, mainly because of the political troubles and the conservativo and isolationist attitude of the former government. C. N.B.

STATISTICS

Area 130 000 quare miles (including Dhofar dependency)

Population: Estimated to be about 750 000 Museat
(capital) 6 200 Matrah 14 000

Agriculture. Cereals dates pomegranates limes goats.

01: This was discovered in 105a and exports began in July 1957. The main odifields are at Fahud Nath and Albal Output in 1969 increased to more than sixteen million tons the government receives 50 per cent of the net income plus 12 5 per cent of total oil exports Prospecting continues both in Oman and oil shore

Entrensy: A new currency the Rial Said: was introduced in May 1996 Equivalent to the f sterling it is divided into 1 000 Bantand as now the only legal tender in the Sultanae. The Indian Ropes formerly circulated on the coast and the Marar Theesa dollar (Thaler) in the interior.

Budgel: Revenues depend almost entirely on oil royalties and other payments by oil companies, in 1969 these were estimated at over £30 million

External Trade: Exports are virtually confined to oil ship ments no total import statistics are available but imports from Britain the principal simpler amounted to £2 313 000 in 1967 £2 718 000 in 1968 and £5 280 000 in 1969

THE GOVERNMENT

Sultan, OABUS bin Sain

Prime Minister and Minister of Foreign Affairs; Sayid

Minister of the Interior: BADR bin SAUD BUSAIDI

Minister of Justice: Muhammad bin Aumad

Minister of Health: Dr Assim Jamali

Minister of Education: Sheakh Saud bin Ali al haralit

Minister of Defence: Col H R. D OLDMAN

Minister of Development and Welfare: Michael Bailey Minister of Information and Spelel Attairs: Abdullah Tai

Minister of Economies: Savid Faisal Bin Ali Bin Faisal

Brilish Consul-General; D G CRAWFORD Indien Consul-General; Shrl G A Poppen

United Sixtee Contail-General: Lez Divsmore (resident in Dhahran)

The Sultanate maintains a Consulate in London at 7 Albert Court, Kensington, S W 7

JUDICIARY AND RELIGION

Legal System: Junsdiction is exercised by the Sharia Conris applying Islamic Law Local courts are officered by Qadhis appointed by the Snitan The Chief Court is at Muscat Appeals from the Chief Court lie to the Sultan.

Religion: The majority of the population are Ibadhi Muslims about a quarter are Sunni Muslims

RADIO

Radio Omen: Muscat f 1970

The British Broadcasting Corporation has built a powerful new medium wave relay station on the island of Masirah off the Oman coast It is used to expand and improve the reception of the B B C 's Arabic I arsi and Urdin services.

FINANCE

BANKING

Brilish Benk of the Middle East: London, f 1889 Muscat, branches in Matrah and Mina al Tahal Man P T H Mason

Essiern Bank Ltd.: London Muscat, Man. J N Scanzon
Nallonal and Grindlays Bank: London, Muscat, Man.

OIL

Petroleum Development (Oman): Muscat; f. 1956; since 1967 85 per cent owned by Shell, 10 per cent by Compagnie Française de Pètroles and 5 per cent by Gulbenkian interests; exports oil from the Fahud, Yibal and Natih oilfields via a pipeline to a terminal at Mina al Fahal, near Muscat; production (1969) 16.4 million metric tons.

Wintershall Petroleum: Museat; holds offshore exploration concession in the Gulf of Oman; drilling since 1968; Wintershall heads consortium with 59 per cent, Shell 24 per cent, Deutsche Schachtbau 10 per cent, and Partex 7 per cent.

TRANSPORT

Pack animals, especially eamels, remain the favoured means of transport for most of the population, but the number of motor vehicles is rapidly increasing.

ROADS

On the eoastal plain there is a graded motor road from Muscat north-west to Sohar and thence inland through the mountains to Sharjah (260 miles). The Oil Company and the Development Department also maintain several graded motor roads in the interior linking Muscat with the Sharqiyah to the south-east, with Nizwa to the west, and with Ibri and Buraimi to the north-west, eovering approximately 500 miles. The eoast road has been improved as far north as Sohar.

SHIPPING

Muscat is the largest port with a good natural harbour. It is the port of eall on the Basra-Bombay mail route; about 200 ships eall each year. The British India Steam Navigation Co. runs a fortnightly cargo mail service from Basra to Bombay, ealling at all main ports in the Gulf, including Museat, which is also served by eargo steamers of the Holland Persian Gulf Lines.

Other ports, for small eraft only, are Matrah, Murbat, Sohar, Kaburah and Sur.

CIVIL AVIATION

There are two landing fields (Bait-al-Falaj and Azaibah) near Muscat, and Gulf Aviation Co. Ltd. operates a thrice-weekly passenger service to Bahrain, Dubai, Abu Dhabi and Doha. Use of the airfield by unseheduled aircraft is subject to at least seventy-two hours' notice and the permission of the Oman Government.

There are military airfields at Salala and Masira Island in the south and the Oil Company operates flights from airfields in the interior. Permission is also required to use any of these.

Gulf Aviation Co. Ltd.: Head Office: Bahrain; Muscat: Gray, MacKenzie & Co. Ltd.

Saudi Arabia

GEOGRAPHY'

The Arabian Pennsula is hounded on the east by the Persan Gulf and Guif of Orana on the south by the Indiana Ocean and on the west by the Red Sea. To the north are the deserts of Jordan and Iraq The territory covers more than one million separate miles of which Saudi Arabia occupies over eight hundred thousand square miles Arabia is a vast tilted platform of ancient rocks with as highest part at the extreme vest along the Red Saudi sloping graded and mountainous whereas the Persan Gulf coast is flat and low lying being fringed with extensive coral reefs which make it difficult to approach the shore in many places.

The central area of the country is called the Naja, the homeland of the Wahhabi Sect which now rules the whole of Sandi Araha. The Nerdod in the north has some wells and even a slight rainfall so life is possible for a few culturators and nomads. To the south of the Najd lies the Raja's Khali or Empty Quarter, a rainless, unreheved wilderness of shifting sand.

Winds are dry and almost all the land is and in the morth there is a rainfall of four to eight inches annually further south, except near the coast, even this fails. The summer is overwhelmingly hot with maxima of over TayoF, whist in winter there can be general severe frost The coasts of the Red Sea and the Persian Gulfare notonous for their humidity.

Over much of Saudi Arabia life is dependent on oases Many wells are used solely by nomads for watering their animals but in some parts, more especially towards the south, there is some cultivation such as the large cases of the Hings, including Medina and Mecca. However, a major change in the economy has taken place following the exploitation of oil and there has long been the revenue from the objections to affects.

It is possible to delimit two ethnic zones of Saudi Arabia a northern, central and western area geographically and and in isolation with a relatively immixed racial composition, and the coastlands of the south-west and east shown a mixed population Arabic is the only language of Arabia.

HISTORY'

The history of the Kingdom of Sandi Arabia may be said to have begin on January 8th 1926, when Im Sa ud long ruler of the interior of the Arabian Pennsula, grochamed himself King of the Hijaz in Jeddah His éew fatus was recognised by Pintain in the Treaty of Jeddah of 1927, while His Sa did his turn acknowledged his reading the History of the High Sandian History of the High Sandian High Sand

Dunng the years that followed, the new king contained to be absorbed in his primary task, of unifying and developing his country. The colomistion policy begins in 1919 was a parased vigorously, land settlements were established and parased vigorously, and settlements were established and the modernization of communications, and the need for the consonic development along modern lines was emphasised by the falling-off in the pligramage during the early that the produced mapphs in-deed by the falling-off in the pligramage during the early that the falling-off in the produced mapphs in-deed for the falling-off in the produced mapph in-deed of the falling-off in the subsequent streams of of the manufaul.

Sandi Araba's chef sufferings during the war were conomic, though there was an Italian air raid on Dhahran (and also on Bahran) in October 1940. The pigranage traffic dropped away almost to extinction, and in April 1943 it was found necessary to include Saudi Araba in the benefits of Less-Liend Up to September 1946 \$17,500 000

bad been received and in August of that year there was a further \$10 ooo ooo from the Export-Import Bank You years later, however as a protest against American policy over Palestine, an American loan of \$15,000,000 was furned down But by this time the oil industry alone was enough to establish the Saudi Arabian economy firmly on its feet.

In January 1944 the California Arabian Standard Oil Company, owned jointly by the Standard Oil Company of California and the Texas Company, was re-formed as the Arabian American Oil Company This was reconstructed once more in December 1948 to include the Standard Oil Company of New Jersey and Socony Vacuum-a move that brought protests from the French Government Under an agreement of 1928 shareholders in the Iraq Petroleum Company, who included the latter two American companies as well as French and British interests, had agreed not to secure rival concessions within an area including the Arabian peninsula A settlement was finally reached at the end of rg48 by which this so called "Red Line ' clause was abandoned Meanwhile production had been mounting steadily as new fields were developed, a refinery was opened at Ras Tanura in October 1945, and two years later work was started on a pipeline to connect the Arabian fields with the Mediterranean In spite of a year's suspension owing to events in Palestine, the task was completed before the end of 1950, and oil first reached the Lebanese port of Sidon on December 2nd of that year In the same port of Saton with December and the was signed with the Araban American Oil Company which was to set an interesting example to other foreign oil interests in December 1951 In 1955 Sandi Arahia was involved in a

 For a more detailed geography and the early history of Arabia, see Part I The Arabian Peninsula. dispute with Arameo over her decision to grant oil transportation concessions to the Greek shipowner Aristotle Onassis. In 1956 a government-owned National Oil Company was formed to exploit areas not covered by the Arameo concession.

Saudi Arabia was an original member of the Arab League formed in 1945, and to begin with played a loyal and comparatively inconspicuous part. Ibn Sa'ud sent a small force to join the fighting against Israel in the summer of 1948. When the solidarity of the League began to show signs of cracking, it was natural that he should side with Egypt and Syria rather than with his old dynastic enemies, the rulers of Iraq and Jordan. In course of time, however, he began to turn once more to internal development, and to forget his political quarrel with the United States in his need for economic advice and aid. The \$15,000,000 Export-Import Bank loan was finally taken up in August 1950; in January 1951 a Point Four Agreement was signed, and in June a Mutual Assistance Paet. But the real basis of development was the revenue from the ever-expanding oil industry. This was sufficient to justify the announcement in July 1949 of a \$270,000,000 Four-Year Plan, in which an ambitious programme of railway development was the main item. A railway now links the oilfields in the east with Riyadh in the centre, and extends to the port of Dammam. For the rest the King's policy was one of cautious modernisation at home, and the enhancement of Saudi Arabian prestige and influence in the Middle East and in world affairs generally.

AFTER IBN SA'UD

On November 9th, 1953, King Ibn Sa'ud died at the age of 71, and was succeeded peacefully by the Crown Prince, Saud. It was assumed that there would be no major changes, but the policy already adopted of strengthening the governmental machine and of relying less on one-man rule was continued by the formation of new ministrics and of a regular cabinet. In March 1958 King Saud conferred upon his brother, the Emir Faisal, full powers over the foreign, internal and economic affairs of Saudi Arabia, with the professed aim of strengthening the machinery of government and centralising responsibilities. In December 1960, however, the Emir Faisal resigned, and the King took over the office of Prime Minister himself. In the following month a High Planning Council, with a team of international experts, was set up to survey the country's resources, and thereafter there has been slow but steady progress in the modernisation of the country.

Throughout his reign the King had seen his rôle as that of a mediator between the conflicting national and foreign interest in the Arab Middle East. He refused to join either the United Arab Republic or the rival Arab Federation. Relations with Egypt ranged from the mutual defence pacts between Egypt, Syria and Saudi Arabia in October 1955 (to which Yemen and Jordan adhered the following year), to the open quarrel in March 1958 over an alleged plot to assassinate President Nasser. Subsequently, relations improved, and the King visited Cairo in September 1959. Contacts with the United States have always been close, owing to the extensive American oil interests. In 1957 King Saud visited America, and in 1959 he made an extensive tour of Europe. The Saudi Arabian Government also played a leading rôle in bringing the Arab governments together after Egypt's nationalisation of the Suez Canal in July 1956, and the Israel, British and French military action in the Sinai peninsula in November. In 1961 Saudi Arabia supported the Syrians in their break with the United Arab Republic, and in general relations with the U.A.R. deteriorated (diplomatic relations were severed in November 1962, shortly before they were resumed with

the United Kingdom). By 1964, however, (in spite of the tensions over the Yemen revolution) there were signs of improved relations. King Saud attended the Cairo conference on the Jordan waters dispute in January, and in March, after a meeting in Riyadh, diplomatic relations with the United Arab Republic were resumed. In September Prince Faisal attended the Arab Summit Conference in Alexandria, and afterwards had talks with President Nasser on the Yemen situation.

THE REIGN OF KING FAISAL

Meanwhile, in March 1964 King Saud had relinquished all real power over the affairs of the country to his brother. Crown Prince Faisal, who had again acted as Prime Minister intermittently during 1962, and continuously since the middle of 1963. The rule of Prince Faisal was expected to result in many concessions to "westernisation" such as more cinemas and television, with more profound social and economic reforms to follow. The division of the country into provinces, each with a thirty-man council, was under study early in 1964. The change of power, by which King Saud retired as active monarch, was supported in a statement by the ulema council of religious leaders "in the light of developments, the King's condition of health, and his inability to attend to state affairs". In November 1964 Saud was formally deposed, and Faisal became King, as well as head of the Council of Ministers with the exclusive power of appointing and dismissing Ministers. His younger brother Khalid was appointed Crown Prince. On August 24th, 1965, King Faisal confirmed his stature as an important Arab leader, when he concluded an agreement at Jeddah with President Nasser of the U.A.R. on a Peace Plan for the Yemen. King Saud went into exile, living principally in Athens, where he died in February 1969.

Although the Yemon problem remained unsolved, there was ovidence of Saudi Arabia's genuine anxiety that a solution should be found, even though in April 1966 the construction of a military airfield near the frontier brought protests from the Yemeni Republican Government and the U.A.R. Representatives of Saudi Arabia and the U.A.R. met in Kuwait in August 1966 in an attempt to implement the Jeddah agreement. But relations with both the U.A.R. and the Arab League continued to be tense, and no progress was evident. Matters were not improved by the appearance in Cairo of ex-King Saud, with a public declaration of his support for U.A.R. policy in Yemen.

During 1966 King Faisal undertook an extensive series of visits abroad, including Iran, Jordan, Sudan, Pakistan, Syria, the United States, Turkey, Morocco, Guinea, Mali, and Tunisia. A trade and financial agreement with Moroeco was the chief concrete result of these tours. In May 1967 he paid a state visit to the United Kingdom, and discussed the South Arabian situation with British ministers. Saudi Arabian troops moved into Jordanian territory at the beginning of June, and collaborated with Jordanian and Iraqi forces in hostilities against Israel. At a summit conference of Arab leaders held in Khartoum at the end of August 1967 Saudi Arabia agreed to put up £50 million of a total £135 million fund to assist Jordan and the U.A.R. in restoring their economic strength after the hostilities with Israel. At the same time an agreement was concluded with President Nasser on the withdrawal of U.A.R. and Saudi military support for the warring partics in the Yemen. By way of recompense for these concessions the Saudi Arabian Government persuaded the other Arab states that it was in their best interests to resume production of oil, shipments of which to western countries had been suspended for political reasons after the war with Israel.

EVENTS SINCE THE 1967 WAR

Though outwardly calm the internal political situation was apparently disturbed by abortive coups in June and September 1969 Plans for both are presumed to have been discovered in advance the only visible evidence of the attempts being the arrests of numbers of army and air force officers a flight of private capital abroad was also reported Some observers drew parallels with developments in Libya In the Yemen the Royalist cause which the Sandi Government had strongly supported appeared to be within a ght of victory early in 1968 but by mid 1969 its remaining adherents had largely been driven into exile and the civil war seemed to have come to an end although further hostilities were reported during the 1969-70 winter Dissension amongst the Royalists which led to the with drawal of Saudi assistance was a principal factor in this decline Discussions between Sana a representatives and Sand: officials took place at Jeddah in March 1970 and the Yemen Republic was officially recognized in July Relations with Southern Yemen deteriorated bowever and an extensive battle on the disputed frontier took place in December 1969 with Saudi Arabia apparently winning easily owing mainly to its superior air power Since then the Aden Government has accused Saudi Arabia of backing the mercenaries of the National Deliverance

The important relationship with Iran under some strain at the beginning of 1968 over the Bahram question improved greatly later in the year In October the two

countries signed a treaty which at last delineated their eighbore boundaries In November the Shah pad a state visit to Saudi Arabia the occasion which included a pignimage was acclaimed as symbolic of Muslim unity The Saudi Government has taken a favourable view of the proposed Gulf Federation and has given financial assistance for the road Buking the Trucai shelkhdoms Togother with Kuwait the government has made streuous efforts during 1971 to break the deadlock on negotiations for the Federation

As principal quardian of Muslim interests. Sandi Arabia was particularly concerned by the fire at the AI Aqsa mosque in Jerusalem in August 1969 and hence it was the leading instigator of the 184 almo summit conference held to condemn Israel in Rabat the following month Relations with other Muslim countries were strengthened by King Fassals state waits to Afghanistan Algeria Indonesia and Malayasa in Jinne 1970 but the closure of the 184 place
Despite the great improvement in communications, welfare services and the standard of luving in general over recent years Saudi Arabia remains the most traditional and conservative of the Arabic countries the ancient restrictions on smoking alcohol dress etc are still very largely observed es are the Muslim calendar and religious feature.

LPES

ECONOMIC SURVEY

AREA AND POPULATION

The area of Sandi. Arabia has been estimated at some 850 oos square miles but the borders have not all been defined and therefore no precise figure can be arrived at A census of the entire population in difficult because of the Bedoug shifts from one area of the country to another and it is estimated that more than 30 per cent of the Bedoug shifts from one area of the country to another and it is estimated that more than 30 per cent of the land the rest settled cultivators A census was carried out in 1064, and the total population is given in official publications of \$\text{g}\$ that the total population is given in official publications of \$\text{f}\$ that has 5 something of an exag grathon Figures have been published of the populations of the chief towers at the chief tow of the x-60 census towards of the chief towers at the chief tower at the chief towards and the state of the x-60 census towards at \$\text{7}\$ towards of the x-60 census towards \text{7}\$ towards of the x-60 census towards \text{7}\$ towards of the x-60 census towards \text{7}\$ towards and \text{8}\$ towards \t

AGRICULTURE

Agriculture is practised over a comparatively small area of the country. The principal crops cultivated on impated soil are wheat lucerne millet and mane while fronts of many varieties, particularly dates grow in the contract of the country of the property of the proper

Agricultural developments in Sandi Arabia are principally concerned with the exploitation of lands inhereto unused owing to inadequate water supplies. In recent years a survey of potential inderground water deposits has been indertaken and the Ministry of Agriculture is working on a drilling and irrigation scheme. A number of regional agricultural centres opurped with up-to-date machinery have been established which give technical instruction and practical assistance to all farmers in the area. One of the major projects undertaken by the government has been the construction of the Jizan Dam The dam was opened in March 1971. has a capacity of 71 million cubic meters and cost about \$8 million.

011

The most important industry in Saudi Araba is the production of crude ol and petroleum products and the country now produces more oil than any other country in the Middle East except Iran being the narth largest producer in the world Intensive efforts have recently been made to increase the scope and diversity of industrial activity by prospecting and eventually putting to use other mineral resonnces in the country However Saudi Arabia will continue to depend on oil as the prime source of income for many versity to come

The existence of rich oil deposits in the country had been suspected for a number of years and after 1923 King Ibn Saud received an annual payment from British oil interests in return for exclusive exploration rights. These rights were later revoked and in 1933, following the discovery of oil on Bahran Island the Sandi Arabian concession was granted to an American company the Standard Oil Company of California Arabian Standard Oil Company white many and the standard of California Company (Arabian Standard Oil Company white many and the standard oil Company white many and the standard oil Company (Arabian Standard Oil Company (Arabian Standard Oil Company (Arabian Standard Oil Company (Arabian oil no 1958 the Texas company (Fetaco Inc.) acquired a half interest in the concession and in 1948 financial agreements were completed as a result of which the Standard Oil Company (Kew Jersey) and Socony Vacuum Oil Company (Company (Company) and Socony Vacuum Oil Company (Company)

Mobil) were included also as owners in the concession. The capital of Aramco is accordingly held as follows: 30 per cent by the Standard Oil Company of California, 30 per cent by Texaco, 30 per cent by the Standard Oil Company of New Jersey and 10 per cent by Mobil.

The operating company began exploring for oil in 1933 and drilling in 1935. It discovered oil in commercial quantities in 1938. The first shipments of oil were made by barge to Bahrain in that year, and the first tanker was loaded in the following year. The Second World War seriously curtailed the expansion plans, but by its end the company had discovered four oil fields and had the necessary facilities, including a large refinery, to meet post-war demands for crude oil and refined products.

A new agreement, concluded in December 1950 between the government and Aramco, provided that the company would pay an income tax which, when added to royalties and all other sums paid to the government, would equal 50 per cent of its net income. Aramco's executive administration was transferred from New York City to Dhahran, Saudi Arabia, in 1952. In March 1963 the company agreed to pay \$100 million in back dues, and to return 64 per cent of its concession area, in settlement of long-standing disputes with the Saudi Arabian government. At the end of 1969, Aramco's proved resources of crude oil were estimated to be 86 billion barrels*. Its current production comes from twelve major oilfields. In order of the amount of their production in 1968, these were Ghawar, Abqaiq, Safaniya, Abu Hadriya, Abu Sa'fah, Qatif, Fadhili, Manifa, Khursaniyah, Dammam, Berri and Khurais. Of these the three first-named are by far the most important. During 1968, the Ghawar field, one of the world's largest reservoirs, had an average production of about 1,520,000 barrels a day. The completion in 1957 of a 22-inch pipeline for the 137 miles from Safaniya to Ras Tanura made it possible to bring the offshore field at Safaniya into production. Three further offshore fields were found in 1967. Production in 1968 from the Abqaiq field was at the rate of about 535,000 barrels a day, and from Safaniya 408,000 barrels a day. Figures for production by fields are not available for 1969 and 1970, but total production in 1970 was 1,295 million barrels, an 18.5 per cent increase on the 1,092 million barrels in 1969. Aramco's payments to the government increased by 28.3 per cent to \$1,150 million in 1970 from \$895 million in 1969. Production has increased steadily every year since 1956, in spite of an interruption of exports for several weeks after the Arab-Israeli war in the summer of 1967. The Ras Tanura refinery on the Gulf, which was completed in 1945, processed 156 million barrels of crude oil in 1969, including 13 million barrels of liquefied petroleum gas, mainly for export.

A 30/31-inch pipeline system, 1,068 miles long, runs from Aramco's oil fields to the Mediterranean port of Sidon, Lebanon. Of this total, the western 754 miles are operated by the affiliated Trans-Arabian Pipe Line Company (Tapline), the capital of which is held by the same companies as Aramco and in the same proportions, and the rest by Aramco. The system cost more than \$200,000,000 to build and was opened in 1950. By 1956 it had an annual capacity of 15 million tons. In 1957 and 1958 Aramco and Tapline spent more than \$19 million to increase the capacity of the pipeline by 25 per cent to an average of 470,000 barrels per day. Much of the expenditure was for the purchase of six auxiliary pumping units, the first of which started operating at Wari'ah in January 1957. Tapline also constructed a pumping station at Qaryatain, in Jordan, some 85 miles from the Saudi Arabian border. Sidon's oil loading facilities include offshore loading lines and are capable of handling tankers up to 100,000 tons. In

1968 the volume of oil transported was 23,527,000 tons. The pipeline was sabotaged in Syria in March 1969 and was out of action until September of that year; there were two further short interruptions in October and November owing to acts of sabotage in the Lebanon. As a result, the volume of oil transported by the pipeline in 1969 fell to 16,768,000 tons. The pipeline was again out of action between May 1970 and January 1971, due to an accident which took place in Syria.

Aramco has put into operation an extensive programme for the utilisation of natural gas produced with crude petroleum. In March 1954 a gas injection plant went into operation in Abqaiq field. This was intended to conserve the natural gas produced and to increase the rate of oil recovery by returning to the oil reservoir 150 million cubic feet per day. The capacity of this plant was increased in 1958 to 205 million cubic feet per day. There is also a long-range programme for conserving the natural gas produced in association with crude oil from the Ghawar field. A gas-injection plant to compress the gas and to inject 200 million cubic feet a day into the 'Ain Dar area of the field was constructed in 1958. During 1968, 304 million cubic feet of gas a day was on the average injected into the Abqaiq field and the 'Ain Dar area of the Ghawar field and more than a trillion cubic feet of gas has been injected since 1954. Most of the available gas produced from the Dammam and the Qatif fields is being used for industrial purposes.

The area of Aramco's original concession was about 673,000 square miles. The company has, however, agreed to relinquish progressively parts of its concession areas. In 1968 the company relinquished some 20,000 square miles, and by 1970 the extent of its concession had been reduced to 105,000 square miles. The company stated in 1969 that progressive relinquishment would, by 1993, reduce its concession to 20,000 square miles.

In addition to Aramco, oil deposits are also being exploited by the Getty Oil Company. In 1949 the Saudi Arabian government granted this corporation a 60-year exclusive concession covering its undivided half interest in the Saudi Arabian-Kuwait Neutral Zone. The American Independent Oil Company (Aminoil, covering Kuwait's undivided half interest) is the operating company and it discovered oil in commercial quantity in 1953 in the Wafra field. Reserves there have been estimated to be 6,500 million barrels. First shipments of oil were made there in 1954. Japanese interests which had obtained concessions from Saudi Arabia and Kuwait in 1957 and 1958 covering an offshore area of the neutral zone of the Persian Gulf, found oil in 1960 which is now being exploited by the Arabian Oil Co. The comparative importance of these concerns can be judged from statistics issued by the Saudi Arabian Monetary Agency in the autumn of 1970. According to these figures, in 1969 Aramco paid \$895 million to the government in tax and royalty; Arabian Oil Co. paid \$37 million, and Aminoil paid \$15 million. The total revenue derived by the government from all three companies in 1969 was \$949 million, including sums paid by companies not yet having any production. In 1969 an independent American survey of the recoverable crude oil reserves of the whole of Saudi Arabia estimated them at 142 billion barrels compared with the above-mentioned figure of 84 billion barrels estimated by Aramco for their own reserves. The figure of 142 billion is larger than the combined reserves of Iran, Iraq and Kuwait.

In 1965 the French state company Auxerap concluded an agreement for offshore exploration in the Red Sea. The agreement provided for the Saudi Arabian state oil organization Petromin to participate in exploitation of any commercial discoveries. In December 1967 two further important agreements were signed. One was between

^{*}r barrel=42 U.S. gallons, 34.9726 Imperial gallons; r billion = r thousand million.

Petronun and the Italian state oil corporation ENI by which the latter was permitted to explore for oil during a period of six years is some 77 900 square km of the Kab al-fixhal in the south east of the country. The other was between Petronun and two American corporations. Sinclair Oil Co. and Nationas, under which the latter were granted similar rights in the Red Sca area. In both cases the prospecting concerns were to act as contractors for Petronun which retained the legal thic to the DEEC than the American Countries and of OAPEC, the Organization of Arab Petroleum Exporting Countries and of OAPEC, the Organization of Arab Petroleum Exporting Countries.

OTHER INDUSTRIES

Building has been by far the most important industry after oil in recent years' New towns have been huilt around the old and the material used is mostly reinforced concrete The Saudi Cement Company's plant at Jadida, near Hoinf in the Eastern Province began production in late 1961 The plant was the first industrial user of natural gas in Saudi Arahia. Government initiated economic development has assumed sizeable proportions in recent years, and promises to give rise to the creation of new industries and expansion of existing ones in the private sector. The construction of roads, ports airports, water projects, communication facilities hospitals clinics and schools are caming other notable projects which share in this extensive development. In addition, the government has bought Aramon so blike plant in Jeddah and is building a refinery to service the markets of the Western Province. Production has started at a \$7 million rolling mill to produce 45 000-60 000 tons of bars and sheet steel annually. In December 1966 a contract was signed with an American firm for the construction of a fertilizer plant at Dammam for the Saudi Arabian Fertilizer Co (SAFCO) at a cost of some \$30 million

Other industries that have been established include iron foundries, sheet metal working plants, tanneres, [oo plants, printing plants, bottled gas plants, power plants, machine shops and date processing and packing factories Many of these new industries are being developed by Petromin with the object of divernitying the country's economy, and Petromin planned to spend some S.K. 1,500 million (R33) million) on these projects between 266 and 1970 or properties of the properties of the spend of the properties of the country of the properties of the

The importance of mining in the economy has declined considerably in recent years. The gold mine at Mahad Dahab was abandoned in 1934, after being worked by the Saudi Araham Mining Synderate for seventeen year: The gold content of the ore was decreasing and no new reserves had been found in sufficient quantities to justify continued operations. The Saudi Araham government's gold mine at Dhulm has also failed to come up to expectations.

TRANSPORT

The government operates a modern railway system connecting the port of Damman on the Guill with Riyadh the capital, some 370 miles inland Work was proceeding on the rebuilding of the histone Hejaz railway, which rain from Damascus through what is now Jordan to blocca until the 1507 Palestine war, when all western explicits departed Discussion on the resumption of work regularies departed by the threath of the resumption of work and when completed the railway should greatly assist the pilgrim traffic and have considerable economic value to Saudi Arabia while the Suce Canal remains closed The

plgrimage has become an even more important event in recent years as improved transport facilities have swelled the numbers of pilgrims in February 1970 an estimated 46 000 pilgrims came to Miceca for the principal festival of the Muslim year cultimbution of the principal festival of the Muslim year cultimbution of them came by air However, the provision of facilities for the pilgrims has involved the government in considerable expense including the construction of a new aurport at Jeddab The government operates an airline indusing all important others of the Kingdom with regular lights to many foreign costing 55 million was turned over to the Sandi Arabian government in September 1961

Minch has been done in recent years to improve the country's port facilities Some 820 million ruyals was spent at Dammann, for example, on installations opened in 1961, and further work, has been done at this important oil port At Yanbu a further 85 million ruyals was spent between r961 and 1966 and plans are under way to modernize the port oil Jeddah, including sight new deep water berthis and a pilgrim centre By March 1970 four new piers were completed. Work is proceeding on a five year highway the most important centres of the country with modern hard surface roads. International roads are being planned which will like the country with Quater and Jordan.

FOREIGN TRADE

Sand: Arabia's exports consist almost entirely of oil, exported by sea from Ras Tanura on the Gulf or by pipe-line to Editria and to the Mediterraneas when Taglines is working. In 1969, apper cent of Aramod's exports west to some the season of the season of the season of the Country of the

Imports cover a very wide range of foodstrafts and manufactured goods, parturalisty machinery In a 1969-70 the total value of imports was 3 213 million rayals compared with 2 804 million rayals in 1968-69 and 2,235 million in 1966-69. The United States is by far the most important in 1966-97. The United States is by far the most important of the control of the con

Internal trade plays a minor part in the economy of Sanda Arabia, the two exceptions to that are the marketing of petroleum products, refaced by Aramen, and the sale of foods and twestock raused by farament, and the document total of 8,797,000 barrels of refined product products. In batch by Aramon within the langdom during 1906, but Aramon's marketing facilities in the eastern, contral and sorthern regions of the country were sold to Petronium with effect from July 181 1967. Apart from that the country depends on its imports

FINANCE

The unit of currency is the riyal, subdivided into so quirsh Since the devaluation of sterling in November 1967, party has been ro 8 ryals to the £ sterling and ryals 4 5 to the US \$ A new paper currency was introduced in June 1961, replacing the "Polgrims Receipts" which had

SAUDI ARABIA—(Economic Survey, Statistical Survey)

previously been in circulation. The Saudi Arabian Monetary Agency, established in 1952, is the Central Bank, its total holdings of gold and foreign exchange at the end of September 1970 amounting to 1,812 million riyals, compared with 1,880 million riyals in March 1970, 1,812 million riyals in March 1969 and 1,608 million riyals in March 1968. The latest figure given by the International Monetary Fund's bulletin for the balance of payments relate to 1968, when there was a net surplus on current account amounting to \$199 million. Visible exports in that year exceeded the value of visible imports by \$988 million, but investment income remitted abroad, which includes the profit on the oil shipped overseas by the oil companies, and other current invisible debits and credits, including receipts from the pilgrim traffic, created a net debit of \$789 million.

In 1957 Saudi Arabia became a member of the International Monetary Fund and the International Bank for Reconstruction and Development. Most of the country's international financial business is transacted in Jeddah, where, among other places, several foreign banks are represented, but in 1967 the licences of all branches of two Egyptian banks were withdrawn. The largest Saudi com-

mercial bank, the National Commercial Bank, has branches in most of the principal towns. In 1960 Saudi Arabia became a member of the International Development Association. There are no restrictions on the import or export of gold or foreign exchange.

GOVERNMENT REVENUE AND EXPENDITURE

As might have been expected, a very large part of the government's revenue consists of tax and royalty in oil. Thus the budget for the fiscal year 1970–71 provided for a total revenue of 6,380 million riyals. Of this, oil royalties amounted to 1,573 million riyals, or 25 per cent of the total, while income tax, much of it from the oil industry, amounted to 3,963 million riyals, or 62 per cent of the total. Expenditure for the same year of 6,542 million riyals included 925 million riyals for Ministry of Defence and National Guards (14.1 per cent of the total), 2,596 million riyals for Development Projects (39.7 per cent of the total), 646 million riyals for the Ministry of Education and Schools (9.9 per cent of the total), 589 million riyals for the Ministry of the Interior (9 per cent of the total) and 166 million riyals for the Ministry of Health (2.5 per cent of the total).

^{*} The government moves to Taif for the summer season.

A population census was taken in 1964 but the total figure has not been released. Some estimates put the total population as low as 3.5 million (1967).

SAUDI ARABIA-IRAQ NEUTRAL ZONE

The Najdi (Saudi Arabian) frontier with Iraq was defined in the Treaty of Mohammara in May 1922. Later a Neutral Zone of 7,000 sq. km. was established adjacent to the western tip of the Kuwait frontier. No military or permanent buildings were to be erected in the zone and the nomads of both countries were to have unimpeded access to its pastures and wells. A further agreement concerning the administration of this zone was signed between Iraq and Saudi Arabia in May 1938.

SAUDI ARABIA-KUWAIT NEUTRAL ZONE

A Convention signed at Uqair in December 1922 fixed the Najdi (Saudi Arabian) boundary with Kuwait. The Convention also established a Neutral Zone of 5,770 sq. km. immediately to the south of Kuwait in which Saudi Arabia and Kuwait have since held equal rights. The final agreement on this matter was signed in 1963. Details of oil production in the Zone are given in the Kuwait chapter.

AGRICULTURE AND INDUSTRY

Agriculture (estimates, metric tons): Wheat 15,000, Maize 21,000, Millet and Sorghum 6,000, Barley 13,000, Rice 2,000, Dates 200,000. Other crops include alfalfa, vegetables, coffee and henna.

Livestock: Sheep 3,600,000, Goats 1,900,000, Asses 22,000.

Industry: Building, Date Packing, Cement (574,000 tons in 1969-70), Soap, Sugar, Rugs, Marble, Gypsum, Nails, Soft Drinks, Industrial Gases, Electricity (600 million kWh. in 1969-70).

THE CONSTITUTION

After Ibn Sa'ud had finally brought the whole of present-day Saudi Arabia under his control in 1925, the territory was made into a dual kingdom.

Six years later, in 1932, the realm was unified by decree and became the Kingdom of Saudi Arabia. Saudi Arabia as a whole has in practice been developing, in the last six years or so particularly, from monarchical towards ministerial rule. The power of the Cabinet was further increased in May 1958, when several ministries were delegated to the Crown Prince. In December 1960, however, the Crown Prince resigned and King Sa'ud assumed the Prime Ministership. In 1962, Prince Faisal resumed the Prime Ministership. In 1964 King Sa'ud was relieved of his duties and his brother Prince Faisal was proclaimed King.

The organs of local government are the General Municipal Councils, the District Council and the tribal and village councils. A General Municipal Council is established in the towns of Mecca, Medina and Jeddah. Its members are proposed by the inhabitants and must be approved by the King. Functioning concurrently with each General Municipal Council is a General Administration Committee, which investigates ways and means of executing resolutions passed by the Council. There are also elected district councils under the presidency of local chiefs, consisting of his assistant, the principal local officials and other important persons of the district. Every village and tribe has a

council composed of the sheikh, who presides, his legal advisers and two other prominent personages. These councils have power to enforce regulations.

The principal administrative divisions are as follows:

Najd: capital Riyadh. Najd is subdivided as follows:

r. The principality of Riyadh, to which are associated Wadi al-Dawasir, al-Aflaj, al-Hariq, al-Kharj, al-'Aridh, al-Washm and Sudair.

 The principality of al-Qasim, comprising 'Unaizah, Buraidah, al-Ras and their villages, and al-Mudhannab and its dependencies.

nab and its dependencies.

3. The Northern principality (capital Hayil). This includes the tribes of Shammar, 'Anzah, al-Dhafir and Mutair, the Town of Taima in the south and some northerly towns.

Hijaz: capital Mecca. Includes the principalities of Tabuk, al-'Ula, Dhaba, al-Wajh, Amlaj, Yanbu', Mcdina, Jeddah, al-Lith, al-Qunfundhah, Baljarshi and Tayif.

'Asir: capital Abha. Includes Abha, Qahtan, Shahran, Rijal Alma', Rijal al-Hajr, Banu Shahr, Mahayil, Bariq and Bisha.

Najran and its villages.

Eastern Province (Al Hasa): capital Dammam. Includes Hofuf, Al-Mubarraz, Qatif, Dhahran, Al-Khobar and Qaryat al-Jubail.

JUDICIAL SYSTEM

Justice throughout the kingdom of Saudi Arabia is administered according to Islamic law by a Chief Judge, who is responsible for the Department of Sharia Affairs. Sentences in the kingdom are given according to the Koran and the Sunna of the Prophet.

The judicial system provides for three grades of court and a Judicial Supervisory Committee:

The Judicial Supervisory Committee. The Committee consists of three members and a president appointed by the King. It supervises all the other courts and is situated at Mecca.

Chief Justice, Mecca: Sheikh Abdullah ibn Hassan.

Courts of Appeal (Courts of Cassation). There are several courts of appeal in Hijaz and Najd, having jurisdiction to hear appeals from the Mahkamat al-Sharia al-Koubra.

Mahkamat al-Sharia al-Koubra. The competence of these courts extends to all cases not covered by the above. They are situated in Mecca, Medina and Jeddah. Appeal may be made to the Courts of Cassation.

Mahkamat al-Omour al Mosta'jalah. These courts, which are held throughout the country, deal with cases of minor misdemeanours and actions in which the value does not exceed S.R. 30. Other branches of these courts deal exclusively with affairs of the Bedouin tribes with the same competence. The decisions of these courts are final.

RELIGION

Araba is the centre of the Islamic faith and includes the holy cities of Meca and Siedina Except in the Eastern Provance where a large number of people follows his arties the majority of the population are of the Sunni faith. The last fifty years have seen the rise of the Walhaba seet who originated in the eighteenth century. But first examinated the control of the Company of the property of the body places and control the pilgramage in Meca.

RADIO AND TELEVISION-

RADIC

Saudi Arabian Broadcasting Co.: Ministry of Information, Airport Rd., Jeddah; three stations at Jeddah, Riyadh and Dammam broadcast programmes in Arabic and English; overseas service in Urdu, Indonesian, Persian and Swahili; Dir.-Gen. Sheikh A. F. Ghazawi.

There are thought to be about a million receivers in the country.

ARAMCO Radio: Dhahran; broadcasts programmes in English for the entertainment of employees of Arabian American Oil Company.

TELEVISION

Saudi Arabian Government Television Service: Information Ministry, Riyadh; stations at Riyadh, Jeddah, Medina, Dammam, and Qassim operate 5 hours daily; major stations and relay points are under construction to serve all principal towns; Dir.-Gen. Youssef Damanhouri.

ARAMCO-TV: P.O.B. 1359, Dhahran; f. 1957; non-commercial, private company; 12 kW. transmitter at Dhahran, limited range transmitter at Hofuf; Producer S. A. Al-Mozaini; 4-5 hours a day.

There are about 50,000 TV sets.

FINANCE

BANKING

The Saudi Arabian banking system consists of the Saudi Arabian Monetary Agency as central note-issuing and regulatory body, three national banks, one specialist bank (The Agricultural Credit Bank) and seven foreign banks.

Saudi Arabia had no central monetary authority until 1952. Previous to this, foreign merchant companies (Gellatly Hankey, Netherlands Trading Society) had acted as bankers to the government, with such functions as the issue of currency being the responsibility successively of the General Finance Agency (set up in the late 1920s) and the Ministry of Finance (established 1932).

The rising volume of oil revenues imposed a need for modernization of this system, and in 1952 on American advice the Saudi Arabian Monetary Agency (SAMA) was established in Jeddah, SAMA complies with a Muslim law prohibiting the charging of interest. Instead, its services are paid for by a commission charged on all transactions. SAMA's functions include: bankers to the government, stabilization of the value of the currency; administration of monetary reserves; issue of coin and notes; and regulation of banking.

Since 1959 all banks have been obliged to hold with SAMA a sum equivalent to 15 per cent of their deposit liabilities which was reduced to 10 per cent in 1962. Under SAMA's guidance specialist banks have been encouraged; the Agricultural Credit Bank was set up in 1964, and there are plans for an industrial development institution. A new banking control law became effective in 1966. Banks must be organized as limited liability companies, and may not trade for purposes other than banking. A minimum of \$550,000 equivalent is set for paid-up capital; banks' deposit liabilities may not exceed 15 times their paid-up capital and reserves; and all banks must plough back 25 per cent of profits before dividends to build up their reserve funds.

The intention of the 1966 law, besides strengthening the control of SAMA, is to encourage foreign banks to open branches in Saudi Arabia in an atmosphere of financial stability and assured growth potential.

TRANSPORT

RAILWAYS

Sandi Government Railroad Organization Dammam Gen

The Sandi Government Railroad is a single track standard gauge line patterned to the specifications of the Association of American Railroad standard and uses modern discel locomotive power with a route length of 666 km (377 miles) Actual construction of the line started in September 1996 and completed in October 1987 it connects the Fort of Dammam on the Arabian Gulf with Ryadd the capital and was built by Aramo on behalf of the fovernment. There is a daily passenger train in each direction to and from Ryadh a daily freight train is also scheduled as required and certain trains are run daily between interpolating point to serve the needs of individually with a board of directory beaded by the Minister of Communication in adultion to working the railways the Organization is also responsible for managing the Port of Dammanu.

The historic Hedjar railway running from Damascus to Medica has been the subject of a reconstruction project since 1963 however little progress has been made since the war of June 1967

ROADS

Asphalted roads link Jeddah to Mecca Jeddah to Medan McLaus to Yanbu Tauf to Mecca Rayadh to at Khari said Damman, to Riduf as well as the puncipal communities and certain outlying pounts in Aramos sixes of operations. Work is proceeding on various other roads including one which will link Jedina and Rayadh and one from Tauf to Juan in the south near the Vennen border 19 y saw completion of the trans-Arabina highway which links Damman. Rayadh, Taif Mecca and Jeddah By the end of 17% source 6.5% km. of modern paved roads were in use 500 km. were under construction and a further 4950 km were at the planning stage.

SHIPPING

The deep-water port of Jeddah is the main port of the hingdom and the port for pligimis to Mecca. An expansion scheme providing for leght new piers for large ships was begun an 1954 and 18 due to be completed in 1957 Yahnh the port of Medina. Has been extended and modernized, with new docks storage space and a special Pligima centre other ports on the Red Sea are Minwa h. Wejh and Jahagh ports on the Red Sea are Minwa h. Wejh and Jahagh and Uquur simulbe only for small local central and, a depressed port at Ras Tahurs built by the Araban American Oll Co for its own use. The deep-water Damman Port

SAUDI ARABIA—(Transport, Atomic Energy, Education, etc.)

which was also built by the Arabian American Oil Co. and is operated by the Saudi Government Railroad, lies approximately 12 km. from the coast and is connected to the mainland by a railway causeway. Expansion of the port was completed in 1961 at a cost of over U.S. \$20 million. Further expansion is planned.

Khedivial Steamship Co.: Jeddah; services to the U.A.R.

Saudi Lines: P.O.B. 66, Jcddah; Red Sea and pilgrim

Turner and Morris Steamship Co.: Jeddah; pilgrim services to India and Pakistan.

CIVIL AVIATION

Saudi Arabian Airlines: Head Office: SDI Bldg., P.O.B. 620, Jeddah; f. 1945; regular internal services to all major cities of Saudi Arabia; regular international services to London, Frankfurt, Geneva, Beirut, Rabat, Algiers, Tunis, Tripoli, Bombay, Karachi, Istanbul, Port Sudan, Khartoum, Cairo, Kuwait, Baghdad, Damascus, Amman, Doha and Asmara; fleet of 24 aircraft, principally Boeing 707, Boeing 720B, Douglas DC-9, DC-6, and Convair 340; Dir.-Gen. Sheikh Kamil Sindi; Asst. Dir.-Gen. Melvin L. Milligan; Gen. Man. Technical T. Morgan; Gen. Man. External Affairs Rida Hakeem.

Saudi Arabia is also served by the following foreign airlines: Air France, A.L.I.A., Alitalia, A.U.A., B.O.A.C., C.S.A., Iranair, Iraqi Airways, K.L.M., Lufthansa, M.E.A., P.I.A., Sabena, Sudan Airways, Syrian Arab Airlines and U.A.A.

ATOMIC ENERGY

Saudi Arabia joined the International Atomic Energy Agency in January 1963. Radioisotopes are used in the oil industry and are being introduced into state-controlled agricultural schemes.

EDUCATION

In recent years Saudi Arabia has made important steps forward in education facilities, and there were about 291,483 children receiving primary education by 1967. Development has been stimulated by a five-year plan covering 1959-64. Budgetary grants for education have increased every year by about 15 per cent.

In the academic year 1966–67 there were 1,468 primary schools with 15,114 teachers and 291,483 pupils. Emphasis is laid on practical training and physical education. Primary education covers six years, from the ages of 6 to 12. Many students go straight to three-year intermediate schools of commerce, industry and agriculture, of which there were 111 in 1962, with 272 teachers and 2,644 students. The industrial schools cover a wide range of traditional crafts as well as metal working, car mechanics and electric fitting. The agricultural schools have modern laboratory facilities and testing grounds. Secondary education, covering the ages 15 to 18 (131 schools, 679 teachers, 30,879 pupils) is split up between academic and technical branches. The first foreign language learnt is English, which is nsually compulsory in intermediate and secondary schools and is often used as the medium of instruction in higher education. Teacher training has received special attention from the Ministry of Education and a number of specialized schools have been opened in recent years. It is intended that all primary teachers shall be Saudi nationals by 1970. All schools are segregated, and far fewer girls than boys are receiving education at all levels.

During 1968-69 there were about 4,500 students at university-level establishments in Saudi Arabia, and about 1,900 studying abroad, about half in the U.S.A.. The first university was founded in 1957 in Riyadh, and others have since been established in Medina and Jeddah. There is a considerable emphasis on technical subjects, which extends to several technical institutes of which those in Riyadh and Dhahran are particularly important. Women were first admitted to universities in 1964.

Besides academic education, great importance is attached to industrial, commercial, and agricultural instruction and attention is also given to the teaching of the handicapped. In 1966-67 the number of industrial schools reached 7, embodying 932 students. Progress has also been made in the field of evening schools. These have been instituted in order to make further education available for those who have discontinued their education. During the year 1966-67 there were 37,698 students in 508 schools as compared to 57 schools with 5,270 students in 1957-58.

Spanish North Africa

SPANISH SAHARA CEUTA AND MELILLA

Ifns a Spanish enclave on the coast of south western Morocco since 1860 was formally handed over to Morocco in June 1969

SPANISH SAHARA

A coastal territory south of Morocco

GEOGRAPHY

The Spanish Sahara consists of an arid tract of country, some 100 000 square miles in area, which extends from the southern boundary of Morocco along the Atlantic coast for over 500 miles to the Mauritanian frontier at Cape Bland-Bland it reaches 300 miles into the Sahara to its exacter frontier with Mauritania Oil a about 60 000 people live in the territory, most of whom are nonadic pastoralists of Moronia or mired Arab-Berber descent with some negro admixture. They are divided into a number of truthe and great which they move seasonally from one pattern to another the only towns are the capital, at Anni and Villa Coarros. The latter stands on a narrow persisnia bail suclosing the bay of Rio de Oro and its harbour suffers from severe sitting.

The relief of most of Spanish Sahara is gentle. The coast is backed by a wide allivaril plan oversion in the south hy extensive said dones aligned from south west to north-east and extending mind over 150 miles Behind the coastal plan the land rises gradually to a plateau surface diversible by said-stone ridges that reach 1,000 feet in height. In the north-east, close to the Mauritanian frontier, isolated mountain ranges, such as the Massat de la Guella, Ties to

over 2 oos feet. There are no permanent streams in Spanish Sahara and the only considerable valley is that of the Seguet el Hamia which crosses the northerminost part of the country to reach the coast at al Aun north of Cape Boyador. The whole of Spanish Sahara experiences an extreme desert chimate Nowhere does mean annual rainfail exceed 4 nucless and over most of the territory its jess than 2 unders. In 704, a vast subtremanean fresh water lake was discovered which is thought to extend some 60 miles inland from Valla Chierces. Vegetation is at present restricted to scattered desert shrukes and excusional patches of coasts grave in the part of the cold characteristic content of the cold characteristic countries.

Spanish Sahara formerly extended in the north as far as the River Draa in southern Morocco but this stimp of temtory was ceded to Morocco in 1938 Morocco, however, lays claim to the whole country. This claim is hased on the fact that Moroccan rule was effective over the whole area in medieval times and the claim has been prissed more strongly since oil prospecting began in Spanish Sahara and subsequently since the phosphate discovering

HISTORY

Cape Bojador on the north west coast of Africa is named in a Catalan map of 1375 The Portuguese rounded the Cape in 1434 and two years later discovered an inlet which became known to them as Rio do Ouro t.e in Spanish the Rio de Oro The voyage of 1436 would seem to have been the first occasion when the Portuguese brought back to Europe negro slaves acquired from the Sanhaja Berbers Thereafter the Portuguese began to peuctrate into the interior, establishing a trading post at Wadan not far from Atar, in 1487 Spanish attempts thereafter to colomise the coastal area from the Canaries had little success. It was not until 1884 that Spain occupied Rio de Oro itself the site of the future Villa Cisneros, and claimed at the same time a protectorate over the coastal zone from Cape Bojador southward to Cape Blanco An agreement of June 1900 between France and Spain marked out the frontier between Rio de Oro and Mauritama but the border lands in the direction of Morocco remained ill-defined Two further conventions of 1904 and 1912 dealt with these lands The southern frontier of Morocco was situated on the Wadi Draa Beyond the Draa southward as far as latitude 27° 40' N the area known as Tarfaya became the southern zone of the Spanish Protectorate in Morocco The region of Cape Juby was occupied in 1916, La Gilera, in the externs south of the Rio do Oro, in 1920, and Smars in the interior only in 1934. It was in 1934 that Smar reorganised the territories lying beyond the aouthern zone of her Protectorate in Morocco—ct the Spanish Sahara The region between 27 do N and 26 N became known as Sagua at Hairara the man centres being the expiril af Aron and Smara. All the lands south of it constituted the Rio de Oro, with its expiral at Villa Canteros

Between 1934 and 1938 the Spanush Sahara (i.e. Sagua al Hamra and Rio de Cro) formed one centralised administration with Tarkaya and Ifin's under a military Governor located at Sud Hin, the capital of the Him enclave Three delegates represented the Governor in the southerst territories are represented the Governor in the southerst territories would be influed in the control of the southerst territories would be formed into two provinces Influe and the Spanish Sahara No mention, was made of the Tarkaya region. The two provinces how came under the control of the Directories would be formed into two provinces and the control of the Directories that the Capital General of the Capital

Moroeco, which became independent in March 1956, laid claim thereafter to all the Spanish possessions in North-West Africa and also to the Islamic Republic of Mauritania. The existence in the western Sahara of Moroecan irregular forces soon gave rise to serious trouble. These irregular bands, which attacked Ifni in November-December 1957. made raids into Tarfaya, Saguia al-Hamra and Río de Oro and also into the northern areas of Mauritania, finding some support amongst such nomads as the Riqaibat, the most powerful of the tribes in the western Sahara. Actions of some considerable size had to be fought near Villa Cisneros on January 3rd and near al-Aiun on January 12th-13th, 1958. A joint Franco-Spanish campaign was waged against the irregulars in February. A French column from Fort Trinquet in Mauritania and Spanish forces from Villa Bens, the capital of Tarfaya, and from al-Aiun converged on Smara in Saguia al-Hamra. Further south French troops from Fort Gourcaud in Mauritania and Spanish forces from Villa Cisneros drove the irregulars out of Rio de Oro. Operations which the French undertook from Fort Trinquet and from Tindouf in Algeria pacified the northern borders of Mauritania. By the beginning of March 1958 the western Sahara had been restored to order.

Spain, in April 1956, had renounced the northern zone of the Protectorate in Morocco assigned to her under the terms of the French-Spanish convention of 1912. And in April 1958, after discussions held at Cintra in Portugal, Spain relinquished to Morocco the southern zone of her Protectorate (also assigned to her in 1912), i.e. the region of Tarfaya. Morocco, since that time, has continued to assert her claim to the territories still under Spanish eoutrol in North-West Africa. For instance King Hassan II, during a visit in February 1965 to the province of Agadir in the south of Morocco, met representatives of the tribes located in Rio de Oro, who, it was said, then re-affirmed their allegiance to Morocco. At the United Nations in December 1965 the Moroccan delegate expressed the hope that the Moroccan claim to the Spanish Sahara and to Ifni might be settled through amicable negotiation. On December 16th, 1965, the United Nations adopted a resolution calling on Spain to liberate the Spanish Sahara and Ifni, and to enter into negotiations which would decide their future. The situation was rendered more eomplex by the fact that Mauritania had in October 1964 informed the U.N. Special Committee on Colonization of its desire to initiate direct discussions with Spain over the territories constituting the Spanish Sahara—a demand

which the Ambassador of Mauritania at Washington reiterated in February 1966. A further complication was discernible inside Morocco itself, where some of the political organizations, above all the right-wing Istiqlal, had long maintained that Mauritania itself was an integral part of Morocco. Indeed, the Istiqlal, during the troubles of February 1966 in Mauritania, urged the government of Morocco to intervene on behalf of the Muslims in what it described as "our usurped province".

In September 1967 the Foreign Minister of Moroceo went to Madrid in order to discuss the future of the Spanish territories in North Africa. The following December, the United Nations passed a new resolution urging Spain to organize, in eonsultation with Morocco and Mauritania and under UN auspices, a referendum which would allow the people of Spanish Sahara to determine its future. The Spanish Government accepted the principle of selfdetermination, but a fundamental difference in approach to the problem became apparent at the meetings in May and June 1970 at Nouakehott and Rabat between the Spanish Foreign Minister and Moroeean leaders. Positions hardened later in the same month after riots at al-Aiun were quelled with loss of life. Accusations of interference and oppression were made by both sides and in July Spain held military exercises along the Spanish Sahara coast. On a visit to the area the Spanish Minister of Housing declared that Spain would never abandon the people of Spanish Sahara. On the other side the leaders of Mauritania, Morocco and Algeria met at Novadhibou and pledged themselves to co-operate in the decolonization of Spanish Sahara.

In December 1970 the UN Committee on Trusteeship again called for a referendum in the territory, while in Algeria an organization working for Spanish Saharan liberation, "Nidam", claimed responsibility for the June riots at al-Aiun. However, diplomatic relations have been maintained at a high level between the most interested parties. In January and March 1971 the Moroccan and Spanish Foreign Ministers exchanged visits and in March the Mauritanian Foreign Minister visited Madrid. On each occasion great stress was laid on the importance of consultation in the settlement of all outstanding problems, and while agreement was not reached on the Spanish Sahara question, the issue appears to have been defused, as can be seen from agreements in other spheres of mutual interest.

ECONOMICS AND STATISTICS

Spanish Sahara is to a major extent a military territory, and policing operations by the forces stationed there account for a quarter of the province's budgetary expenditure. In 1961 the province received a considerable boost from petroleum exploration when the expenditure of the prospecting companies helped to offset the costs of maintaining the province. However, hopes of valuable petroleum finds have been disappointed and the main new element in the economic life of the area is the introduction of phosphate mining. There is also tourism, though this is at the moment on a very reduced scale—visitors numbered only some 14,815 in 1969.

In the Sahara the land is too poor and the population too small to generate any economic wealth. By 1970 the European population was estimated at 25,000 (the majority being Spanish soldiers), while the number of the indigenous population, most of whom have a nomadic way of life, was put at 50,000, though many more nomads enter the territory during the rainy season. The northern part of

the province parallel to the River Draa on the northern boundary is fairly mountainous, but none of the rivers is of any permanence; most of the territory is desert. Settled agriculture is eonsequently slight; small quantities of barley and maize are grown, but most of the population is engaged in animal husbandry. In 1969 there were 58,247 eamels, 145,408 goats and 18,426 sheep. Live eamels and animal skins are sometimes exported to the Canary Islands. From Cabo Bojador down to La Guera, lobsters and other fish are caught by the Canaries fleet and sometimes by the Huelva fleet and by members of the Imeraguen tribe. The tonnage landed fluetuates from year to year, but is usually 4,000 to 5,000 tons. At La Güera, the eentre of this activity, there are two fish-processing plants. This is virtually the only industrial activity except for local crafts and a U.S.-financed desalting plant producing flavoured mineral water for local consumption. The production of electricity was 5,118 thousand kWh. in 1969. Communications in the Sahara are limited to 6,300 km. of poor-quality roads and a number of small airports served by the Spanish and no Iberia. In 1969 there were 2 759 cars 250 commercial vehicles and 3 tractors

In 1961 the restrictions on foreign capital investment were modified and the Saharan province experienced a brief boom as a result of the lure of mineral wealth Nine U S and three Spanish firms took up concessions for petroleum prospecting However by the end of 1963 nearly all of the companies ran down operations and the only ones to remain were Gulf Oil (allied with the Spanish CEPSA) Texaco of Spain Inc and the State-controlled INI By 1964 60 per cent of the area of the concessions had been investigated at an approximate cost of 5 000 million nesetas with no favourable results. The discovery of oil in mainland Spain probably precludes any revival of interest in the Spanish Sahara for some time to come Oil companies were thought to be holding on to the concessions there only to put themselves in a better position to compete for concess one in mainland Spain. The only mineral sources proved so far are iron situated in the north of the province (the INI who carried out the survey claimed that the deposits are considerable and of 65 per cent iron content) and phosphates commercially workable deposits of which were found in 1961

The phosphate deposits are now known to be amongst the nefacts in the world In March 1957 the development contract was awarded to a consortum led by the International Sincerals and Chemical Corporation of America (with a 25 per cent induced). From the International Sincerals and Cerman interests are not such as the second of the International Sinceral Company and the International Sinceral Interests withdraw from the project mainly because Spain instead on seed in the phosphates to a new factory in Spain steal? The Spainth state controlled company new in complete control of the venture and has signed up several subcontractors from other European countries to tonshruct the various facilities required with financial guarantees provided by the Spainth Covernment Desert roads have been cut and Spain has built a vulge for 50 cm of the sea and production is scheduled to start in 3972 at the rate of 2 million forum per annum.

It was announced from al Aum in May 1966 that a commission was to be formed which would prepare a plan for the social and economic development of the Spanish Sahara The-opening up of the phosphate mines at Bin Craa near the Moroccan border will no doubt increase the desire Sahara. Morecome the Market will no doubt increase the desire Sahara. Morecome the Market will be suffered to the Market

A potential source of income which has been exploited only on a very small scale as yet, as the found trieds in 1969 there were 14 815 visitors to the country and these mostly came on day excursoss from the Camary Lalands, for the country has little hotel accommodation to offer Probably the most important economic breakthrough of recent years was the discovery in 1964 of a vast subtermena lake of fresh water thought to extend some 50 miles inland from Villa Cismeros Rationally tapped this water opens up a number of development possibilities. The fading prospects of oil may encourage attention to the joint development of water and agriculture.

STATISTICS

Area 266 coo square km. (approx.) (Río de Oro 184 coo su km. Sekia el Hamra 82 coo sq. km.)

Population (1967 census) non Europeans 46 558 Europeans 10 184 (also 15 000 Spanish soldiers) al Aun 16 319 (capital) Villa Cisneros 5 454 about 50 000 nomada enter Spanish Sahara during the rainy season

THE GOVERNMENT

Spanial Sahara was recognized as a Province in 1958 It is divided into two regions Schia el Hama (82 000 g km) and Riode Oro (184 000 g km). A Ceneral Assembly (Pres Sella Uld Assiral) and a Chilife liceal conneil are the main representat two bodies of the province The province is represented in the Spanial Cortes by 3 procuradores Governor General Gen. Fernando no Santiaco.

Director General for Promotion of the Sahara D EDUARDO Junco Mendoza.

Religion Muslim Europeans are nearly all Catholics

Mining Phosphate deposits at Bucraa estimated at 1 700 million tous will be exploited by Empresa Nacional Minera del Sahara SA (ENMINSA) a state-controlled company

Radio Radio Sahara Apt 7 al Aiun government station Dir J Sahovero Diaz

Radio Villa Cisneros Apt 50 Villa Cisneros govern ment station Dir E Ponce Ramos

Transport Airfields at Villa Casneros (the chief seaport) La Güera and al Aum with passenger services to Madrid and Las Palinas operated by Ibera A 3,500 metre loading pier is under construction at al Aum to handle up to 2 000 tons an hour of phosphates from 1972ouwards A 60-mile conveyor will bring the phosphate ores from the mines at Burcaa

CEUTA AND MELILLA

GEOGRAPHY

CEUTA

The ancient port and walled city of Ceuta is situated on a rocky promontory in north-western Morocco overlooking the Strait of Gibraltar. It was retained by Spain as a "plaza de soberanía" when Morocco became independent in 1956 and is administered as part of Cádiz Province. The Portuguese first established a fort at Ceuta in 1415 and it was ceded to Spain by Portugal in 1668. It developed as a military and administrative centre for the former Spanish Protectorate in Morocco and now functions as a bunkering and fishing port. In 1965 its population was 76,098.

MELILLA

Melilla is situated on a small peninsula jutting out into the Mediterranean in north-eastern Morocco. It was retained by Spain as a "plaza de soberanía" when Morocco became independent in 1956 and is administered from Málaga. It was annexed by Spain in 1471 and served as a military stronghold up to the present. In 1965 it had a population of 80,758 and it is an active port which exports over 1 million tons of iron ore annually from mines inland at Kelata, Morocco.

PEÑÓN DE VELEZ, PEÑÓN DE ALHUGEMÁS AND CHAFARINAS

These three rocky islets, situated respectively just west and east of Alhucemas and east of Melilla off the north coast of Morocco, are governed as integral parts of Spain.

HISTORY

Ceuta, Melilla and the island dependencies at 'mown as the Plazas de Soberanía—i.e. presidios, or to fied enclaves, over which Spain has full sovereign rights. Children born in these dependencies, whether Christian or Muslim, are Spanish citizens and subjects. Both Ceuta and Melilla have municipal councils (ayuntamientos). Since Morocco became independent in 1956, supreme civil power in the presidios has rested in the hands of the Governor-General of the Plazas de Sobranía, who is himself responsible to the Directorate-General of African Possessions. In respect of ecclesiastical and judicial affairs Ceuta is integrated with the province of Cádiz, and Melilla with the province of Málaga in Spain.

Morocco, since 1956, has laid claim on a number of occasions to the Spanish possessions in North-West Africa. Spain, indeed, renounced in April 1956 the protectorate in northern Morocco which had been assigned to her under the terms of the Franco-Spanish convention of November 1912. No mention was made, however, of Melilla. Two years later, in April 1958, after discussions held at Cintra in Portugal, Spain handed over the protectorate in southern Morocco (sometimes known as Tarfaya) which had also been allotted to her in 1912. Recent events have made it clear that Spain would be most reluctant to cede Ceuta and Melilla—towns which she has now held for some centuries and which are largely Spanish in population and character. The Moroccan government has drawn a parallel with the situation in Gibraltar and pointed to the apparent inconsistency in the policies of the Spanish government. However, Moroccan attention is now focused on the much more important Saharan territory ruled by Spain.

CEUTA

Ceuta is situated on the African shore opposite Gibraltar, the Straits being here about 16 miles wide. The Portuguese took Ceuta in 1415. On the union of the crowns of Spain and Portugal in 1580 Ceuta passed under Spanish rule and in 1649, when Portugal was separated from Spain, asked

to remain under Spanish control. During the sixteenth, seventeenth and eighteenth centuries Ceuta had to endure a number of sieges at the hands of the Muslims. Ahmad Gailan, a chieftain in northern Morocco, blockaded the town in 1648-55. The Sultan of Morocco, Mulai Ismail (1672-1727), attacked Ceuta in 1674, 1680 and 1694, after which he maintained a blockade against the town until 1720. Ahmad Ali al-Rifi, a chieftain from northern Morocco, made yet another unsuccessful assault in 1732. A pact of friendship and commerce was negotiated between Spain and Morocco at Aranjuez in 1780, a peaceful agreement following in the next year over the boundaries of the Ceuta enclave. There was in 1844-45 a sharp dispute once more about the precise limits of Ceuta. Further disagreement in 1859 led to the war of 1860. Spanish forces, after an engagement at Los Castillejos, seized Tetuán from Morocco. After another battle at Wadi Ras in March 1860 the conflict came to an end. A settlement was now made which enlarged the enclave of Ceuta and obliged Morocco to hand over to Spain 100 million pesetas as war indemnities. In 1874 the town became the seat of the Capitania General de Africa.

MELILLA

Spain secured control of Melilla in 1496, the town being infeudated thereafter to the ducal house of Medina Sidonia, which was empowered to appoint the governor and esneschal with the approval of the Spanish Crown. The Riff tribesmen attacked Melilla in 1562-64. Later still, the Sultan of Morocco, Mulai Ismail (1672-1727) assaulted the town in 1687, 1696 and 1697. Sultan Muhammad b. Abdallah (1757-90) besieged Melilla in 1771 and 1774. An agreement concluded between Spain and Morocco in 1780 at Aranjuez led, however, in the following year to a peaceful delimitation of the Melilla enclave. There was a brief period of tension in 1844 and then, in 1861, under the terms of an agreement signed at Madrid, after the Spanish-Moroccan campaign of 1860, Melilla received an extension of its boundaries. Trouble with the Riff tribesmen gave

SPANISH NORTH AFRICA-CEUTA

rise in 1893—94 to the so-called 'War of Melilla which ended with a settlement negotiated at Marakesh H was not until 1909 that Spanish forces after a hard cumparing occupied the mountainous hinterland of Melilla between the Wada Kert and the Wada Muluya—a region in which some ten miles behand Melilla are situated the rich iron numes of Beni Bu Hrur In July 1921 the Riff tribes under the command of Abd al Krim defeated a Spanish force near Anaul and threatened Melilla itself Only in 1926 with the final defeat of the Riff rebellion was Spanish control restored over the Melilla region Melilla was the first Spanish town to rise against the Government of the

Popular Front on July 17th 1936 at the beginning of the Spanish Cavil War Since 1939 both towns have been ruled as integral parts of Spain.

OTHER POSSESSIONS

The Chafannas Islands lying about 24 miles off the Cabo de Agua came under Spanis control in 1847 Behon de Almeemas is situated some three-quarters of a mile from the coast opposite Aydur It was occupied in 1673 Peñon de Veler de la Gomera about 50 miles farther west came under Spanish rule in 1508 was then lost not long afterwards and reoccupied in 1564

ECONOMICS

CEUTA AND MELILLA

Conta and Melilla both free ports are in fact of little conomic importance while the other possessions with a population of 350 mostly fishermen are of negligible significance The basin reason for Spanish retention of these areas it their overwhelmingly Spanish population. For instance in the Melilla census of 1760 of a total population of 179 of 50 only 8 po Minlims and 3 100 Jews were recorded. Centra apopulation is reported to have fallen by over 3 coon in the 1964-69 period owing to the lack of economic opportunities in the town The linterland of the two cities is small the total extent of Centra is 19 square kilometres and of Melilla is 23 vajuare kilometres. Accordingly most of the populations a food needs have to be imported standing and anchories are the most important stems in an annual catch of about 16 coo tons Centra is the stronger in terms of fish processing and in a census taken in 1935 eight firms produced z 419 tons of tuned fish in Melilla the production figure for the same year was 799 tons. The fishing first here numbers 70 boats of the uncommended of the time of the sure of the inner special central the conomics of the cities is the port activity most of the cronomics of the cities is the port activity most of the exercise take the form of fuel supplied—at very

competitive rates-to ships Most of the petroleum fuels come from the Spanish refinery in Tenerile Ceuta's port is the busiest visited by 9 234 vessels in 1969 but apart from the ferries from Malaga in Spain Melilla's port is not so frequented and its exports are correspondingly low-3 6 million pesetas in 1962 But it figures importantly as an export point for the iron ore mined in the Uixan mines of the Moroccan Rif Ceuta on the other hand was able to show exports of 73 million pesetas in the same year Centa exports wood cork foodstuffs and beverages Imports—largely of fuels—were 94 million pesetas to Ceuta and 16 million to Melilla in 1952 Industry 18 limited to meeting some of the everyday needs of the cities In both cities less than two per cent of the working population are employed in agriculture Most of the indus try is located in the port area. The total labour force in Ceuta in 1962 numbered 13 080 (construction 2 083 textiles 1 276 fishing 1 384 and commerce 1 768) Unemployment in both towns is about 600-700 Business and port activity are sufficiently high to permit the municipalities budgets which hy Spanish standards are high in relation to the numbers of population in 1964 these were 70 million posetas for Centa and 90 million pesetas for Melilla

STATISTICS

MELILLA

Area: 12.3 square km.

Population (1965): 80,758 (70,000 Spanish, 7,600 Africans, 1,900 Jews); 1969 estimate: 100,000.

External Trade: Melilla is a duty-free port. Most imports are from Spain but over 90 per cent of exports go to non-Spanish territories. Chief exports: fish and iron ore from Moroccan mines.

Transport: There is a daily ferry service to Málaga and a weekly service to Almería. Melilla airport is served by a daily service to Málaga, operated by Iberia.

Education (1970): Primary: 196 schools, 6,174 pupils; Secondary: 2,675 pupils.

Government: A Mayor administers the town.

Radio: Radio Melilla, O'Donell 26, Melilla; commercial; owned by Sociedad Española de Radiodifusión.

OTHER POSSESSIONS

Peñón de Velez de la Gomera and Villa Sanjurjo on the Mediterranean coast between Ceuta and Melilla—and the Chafarinas Islands lying east of Melilla near the Algerian border. Peñón de Velez de la Gomera and Villa Sanjurjo are small towns. The Chafarinas Islands have no permanent inhabitants.

The Sudan

PHYSICAL AND SOCIAL GEOGRAPHY

THE NILE

The Democratic Republic of Sudan is the largest state in Africa (2 500 000 sq km) stretching across nearly 18° of latitude and from sub-equatorial forest to some of the driest desert in the world. These vast spaces of contrasting terrain are, however, linked by the unifying Nile Any account of Sudan should perhaps start with the river, so vital is it to the republic The Nile enters Sudan from Uganda in the south and the "Bahr el Jebel" is fed by a number of streams draining the south west of the country Some miles north of Mongalla, the river enters the Sudd region where seasonal swamps cover a large part of the area The White Nile drains the Sudd region northward, though half of the flow is lost by irrigation in the Sudd The Blue Nile drains a large part of the Ethiopian Highlands and joins the White Nile at Khartoum The two rivers are very different. In August the Blue Nile is in flood and rising seven metres above its low level, makes up nearly 90 per cent of the total discharge at Khartoum (7,000 cu m per sec) At low water the more regularly flowing White Nile provides By per cent of the discharge and the Blue Nile is reduced to a mere 80 cu m per second North of Khartoum the Nile is the focus of most agricultural activity and pump irrigation along its banks provides a green strip through the desert to Wadi Halfa and Lake Nasser The Athara, which is the only tributary north of Khartoum, flows for about six months of the year and then dries up into series of pools

PHYSICAL FEATURES

Away from the Nile Sudan is mainly a plainland and plateau country, although there are a number of important mountain ranges such as the Imatong and the Nuha Mountains (rusing to over 1,500 m) in the south, Jobel Marra a largely extinct volcamo (over 3,500 m) in the west and the Red Sea Hill ranges (over 2 000 m) in the north-east Elsewhere the plannlands, diversified in places by smaller hill ranges slope gently to the north and towards the Nile

CLIMATE

Sudan has a range of tropical continental climates with a marked climate gradient from south to morth and from the Ethiopian plateau north westwards. In the south the ramy season lasts up to eight months, producing over 1,000 mm of precipitation, while at Atlara, north of Khartoum, there is a one-month army season in August and only 50 mm of rainfall in the north high summer temperatures are common, mean daily maxima reaching about 10.5 F in Khartoum, the contract of the co

tonm in May and June, though there is usually a marked durinal range (about 68°F). In the south temperatures are lower (average daily maxima 86°F), the hottest months being February and March.

VEGETATION AND SOILS

Vegetation types are related to the climatic gradient Tropical rain forest is found only in the plands of the extreme south, and the south-east is dominated by a wooded grassland complex, which merges northwards in Kordofan Darfur and Blue Nile Provinces to a 'low woodland savaniab', dominated by acacia and with large areas of short grassland Northward is a gradation through semi-desert to desert. The pattern is broken in the south by the large swamp grasslands of the Sudd area

In the south-east areas from east of Khartoum to Juba alkaline clay soils dominate, and the southwestern part of the country bas red latosols, but elsewhere soils are predominantly sandy with pockets and strips of finer materials along the water courses.

POPULATION

The population of Sudan, projected from the 1955 census, is now about 15 ooo ooo and appears to be increasing rapidly. The total is small in relation to the size of the country, but there is a very uneven distribution, with over 50 per cent of the people concentrated in 15 per cent of the total national area High densities occur along the Nile and around Khartoum, but parts of Kordofan near the railway line, the Nilab amountains and parts of Bahr el Ghazal and Darfur have average densities of 15 per 5q km with much higher focal concentrations. The people of northern Sudan are of mixed Arabic and African origin and traditionally are nomadic or semi nomadic, in the south Nilotic peoples predominate, the Niler, the Dinka and the Shillak being the most important.

The major towns are the provincial centres, with the three towns of Khartoum Omdurman and Khartoum North forming by far the largest urban centre The Khartoum urban complex, with a population of about 35,000, is the main industrial, commercial, communication and administrative centre, and landles op oer cent of the external trade of the other towns Atbara the centre of the rallway industry. Wad Medam, first town of the Cegura, El Obed and Julia, are the most important Sudan has a well-developed railway system is populated parts of the country. The road system is pooly developed, and outside the main towns well maintained roads are rare, except in the extreme south.

HISTORY

The geographic position of the Sudan, between the Mediterranean-Middle Eastern world on the one hand and Central Africa on the other, has played an important part in determining the character and politics of the country since Biblical times at least. In almost all the contacts between the Sudan and the outside world Egypt has been the most important link, and, especially since the rise of Islam, the dominant one. Thus the Pharaohs, the Persians, the Greeks, the Romans, the Arabs, the Turks and the British, all those who governed or conquered Egypt in the past, have in turn found it either necessary or desirable to extend their influence, if not their power, beyond the traditional boundaries of Egypt (between the first and second cataracts) into the lands which now constitute the Republic of Sudan, Conversely, the inhabitants of those lands, or at any rate those of them who lived in the northern parts of the country, have always had to choose between three alternative policies: domination by Egypt; independence from their neighbours; or conquest of Egypt; at one time or another each of these possibilities was actually realized. At no time, however, could either of the two countries ignore the other—a fact which, with modern Egyptian nationalists, became the justification for making the Unity of the Nile Valley for many years the raison d'être of Egyptian foreign policy.

ANCIENT AND MEDIEVAL

From the time of Tuthmosis I (1530-1520 B.C.) until the eighth ceutury B.C. northern Cush (as the area as far as the Gezira was called in ancient times) was, for the most part, under the effective control of the Pharaohs. And even after the political supremacy of the Pharaohs had been completely shaken off the Cushites continued to be so thoroughly Egyptianized that, at times, they regarded themselves as the champions of true Egyptian culture.

The political mastery of the Pharaohs in Cush gradually diminished from the tenth century onwards, and by 725 B.C. the balance of power was finally turned by a series of competent Cushite leaders who established themselves as the twenty-fifth Pharaonic dynasty. The most renowned Pharaoli of this Cushite dynasty was Tirhaka (688-663 B.C.) under whose leadership the empire extended from Cush to Syria and whose wars in Syria and Judea are recorded in the Bible. Tirhaka's empire, however, did not last long; a number of setbacks led to his final defeat by the Assyrians in 666 B.c. The kingdom of Cush survived for a thousand years, during which it expanded to the south, the capital being transferred from Napata, near the fourth cataract, to Meroe, near Kaboshiya, about 100 miles north of Khartoum. But under the pressure of Nubian migrants from the south-west and the new power of Axum in the east, the Meroitic kingdom declined and there was little of its former glory left when the first Christian king of Axum raided the Nile valley in A.D. 350.

From this cataclysm emerged three Nuba kingdoms into which Christianity was introduced from Egypt under the patronage of the Empress Theodora early in the sixth century A.D.

By A.D. 639, when the Arab Muslims invaded Egypt, two Christian Nuba kingdoms occupied approximately the territory formerly covered by the Meroitic realm. With the more northerly of these the Arab invaders made a treaty which subsisted for six hundred years. There was little Arab penetration into the Nuba country and the Sudan as a whole until the rise in Egypt of the Bahri Mamluk Sultans about A.D. 1250. These both encouraged southern emigration by the Bedouin and interfered in the politics of the northern Nuba Kingdom, which eventually disintegrated through Arab infiltration and intermarriage. The more southerly kingdom survived until A.D. 1504, when it was overthrown by the invasion of Negroid newcomers from the south called the Funj, who also defeated the infiltrating Arabs.

The Islamic Sultanate of The Funj, otherwise known as "the Black Sultanate", was, in effect, a confederation of smaller Sultanates or tribal chieftainships, each ruled by a "mek", or prince, who owed allegiance to the Sultan at Sennar, the new capital city on the Blue Nile, about 170 miles south of Khartoum. The authority of the Sultan at Sennar was recognized throughout the former lands of Cush and Nubia, including the Gezira, but was contested in Kordofan by the dynasty of Sultan Suleiman Solong, which established itself in Darfur in 1596. Largely as a result of internecine warfare and wars with the Furs in the west and the Abyssinians in the east the energies of the Funj were sapped and, by the nineteenth century, when Muhammad Ali Pasha of Egypt challenged them, their Sultanate was already in decline.

THE NINETEENTH CENTURY

Muhammad Ali had two main objectives in the Sudan: gold and slaves, both of which he needed in order to build an Egyptian-Arab empire independent of that of the Sultan in Istanbul. His ambitions in this respect were frustrated by the European powers and his dreams about gold were proved to be false. But Muhammad Ali did succeed in establishing an empire in the Nile Valley which lasted from 1821, when the last of the kings of Sennar surrendered, until 1885 when Khartoum fell to the Mahdi. Kordofan and Darfur were subsequently added to Sennar and, under his successors, principally Khedive Ismail, the boundaries of the empire were extended to the Great Lakes, and by 1877 the Somali coast as far as Ras Hofun was also recognized as Egyptian territory under the suzerainty of the Sultan.

Within this vast but loosely organized empire the Sudan was, at first, viewed as a province of Egypt but its administration, centred on the new capital of Khartoum, was afterwards decentralized and put under a Hakımdar (or Governor General) to whom provincial governors were responsible And the provinces were likewise divided into smaller units which tended to follow the traditional tribal and territonal boundaries of the Funj period. The personnel of the new regime was a mixture of Cureassian Turkish. European and Armenjan officers of the Ottoman Egyptian army who were assisted espocially at the lower levels by Sudanese shealths and tribal leaders.

Like its counterparts in other parts of the later Ottoman empire the Sudan administration was cor rupt and far from efficient. Its difficulties arising from the general malaise of the declining empire were further accentuated on the one hand by frequent and arbitrary interference from Cairo and on the other by the policy of rapid but poorly organized expansion which was followed by Muhammad Ali s successors especially Khediye Ismail Ismail furthermore was determined to abolish slavery in his own lifetime Slavery had been part of the social system throughout the Nile Valley including the southern Sudan But trading rights in the newly opened south had been sold to armed adventurers and searching for slaves was carned to extremes which were in many cases reminiscent of the barbarities of the triangular slave trade Ismail hoped to mitigate these evils by ad ministrative means and through the agency of European expatriates such as Sir Samuel Baker and General Charles Gordon But the violent methods used by these men in order to abolish the slave trade ahenated large sections of the population caused considerable social and economic dislocation and to that extent weakened the government's control over the country and played into the hands of the Sudanese religious rebel Muhammad Ahmed Abdulla In March 1881 Abdulla declared that he was the Mahdi and called upon the people to rally with him against the Turks and for the reformation of Islam This was not at first taken semously by the government The Mahdi on the other hand showed remarkable skill in manoeuvre and organization and under his able leadership the apparently minor rehellinn was rapidly transferred into a nation wide jihad which hy January 1880 resulted in the fall of Khartoum Thus began a new chapter in the history of the country during which the Sudan was governed by Sudanese first under the Mahdi and after his death in June 1883 by the Khalifa Abdullahi whose rule lasted for more than thirteen years

In the meantime Britain had occupied Egypt and assumed effective but induced control of its government. This in 1883 the Government of the Khedive acting on what was officially described as the advice of the Britain Covernment: concluded that it could not hold the Sudan against the Mahnists and therefore decided to evacuate the country and concentrate mastead on the development of Egypt's own resources. It was in order to execute this policy that Gordon was sent to Khartoum where he was killed when the fown fell to the Mahdi-The Egyptian nationalists greatly resented this policy for evacuation which they felt was dictated by British not Egyptian interests

Ten years later Britain in order to safeguard its own position in Egypt and to ward off the Italians the Belgians and most importantly the French-all engaged in the general scramble for Africa including the Upper Nile-decided that the Sudan also should be brought under its effective control But since conquest would have brought Britain in direct conflict with the French and the other European powers in Central Africa the British Government decided that the conquest should be done in the name of the Khedive and Egypt who it was contended were now in a position to reaffirm their control over what was described as Egyptian territory which had been temporarily disrupted by the Mahdist rebellion The reconquest as it was called was as unpopular with the Egyptean nationalists as the policy of evacuation had been ten years previously- and for the same reasons Opposition notwithstanding the reconquest was executed by combined Egyptian and British forces under the general command of General Herbert Kitchener It took three years from 1896 to 1898 when on September 2nd the last of the Mahdist forces were destroyed at the battle of Omdurman

THE CONDOMINIUM

The Anglo-Egyptian Agreement of 1899 laid the foundations of the new regime in the Sudan The important but thorny question of sovereignty over the country was however deliberately left out of the Agreement For from Britain's point of view the acceptance as hinding law of the theory that the new regime was a restoration of the Ottoman-Egyptian regime overthrown by the Mahdi was undesirable because it would have left Britain without legal basis for its presence in the Sudan while the alternativethe theory that Britain was sovereign or had a share in sovereignty over the Sudan-would have aroused the hostility not only of the Egyptians and the Sultan hut also of the French and the other European powers and was therefore similarly undesirable. While empha sizing the claims which accrued to Britain by virtue of her participation in the reconquest therefore the Agreement was silent as to the juridical positions of the two conquering powers in the Sudan This allowed Britain considerable scope for political and diplomatic manoeuvre Thus when the French questioned Britain's presence in the Sudan the British govern ment insisted that it was acting on behalf of the Khedive when the Egyptian nationalists raised the same question they were reminded of Britain's role in the reconquest and when they protested their in ferior position in the administration of the country though they had contributed the larger share of men and money during the reconquest and almost all the expenses of the administration Britain maintained that this was only fair as the country was reconquered in the name of Egypt which however was unable to govern itself let alone the Sudan This was perhaps diogical but from a practical point of view it made little difference so long as Britain was in effective control of Egypt as well as the Sudan After Egypt s independence in 1922 however and especially after the abolition of the Caliphate in whom sovereignty over the Sudan had theoretically resided during the

Ottoman-Egyptian régime, the silence of the Agreement as to the subject of sovereignty became a source of increasing embarrassment to Britain.

The juridical dispute aside, the Agreement established in the Sudan an administration which was nominally Anglo-Egyptian but was actually a British colonial administration. Like the Ottoman-Egyptian administration it was headed by a Governor-General in whom all civil and military authority was vested. He was appointed by Khedivial decree but on the recommendation of the British government, without whose consent he could not be dismissed. Nothing was mentioned in the Agreement about his nationality but it is not surprising that all the Governors-General of the Sudan—like the Province Governors and District Commissioners who assisted them-were British. The British character of the régime became more obvious after 1924, when the Egyptian troops, officers and civilians who had hitherto acted as intermediaries between the British and the Sudanese were evacuated from the Sudan following the murder in Cairo of Sir Lee Stack, the then Governor-General of the Sudan and Sirdar (i.e. C.-in-C.) of the Egyptian Army. The administration of the country was until then based on the principle of Direct Rule and was, especially before the First World War, carried out along military lines. This was necessitated by the fact that resistance to the new régime did not cease after the battle of Omdurman and risings against it occurred annually. By the end of the war, however, the process of pacification, except in the south, was completed, and the last stronghold of Mahdism was taken when, in 1916, Sultan Ali Dinar of Darfur was killed and his Sultanate made a province of the Sudan.

INDIRECT RULE

The evacuation of the Egyptians from the Sudan in 1924 was generally unpopular with the Sudanese, especially the non-Mahdists and the small but influential educated class, who sympathized with the Egyptians on grounds of common language and religion, and saw in Egypt a natural ally against the British. Demonstrations were therefore organized in order to show solidarity with the Egyptians, and a Sudanese battalion mutinied and clashed with British troops. The rising was however ruthlessly crushed. Relations between the Sudan government and educated Sudanese deteriorated rapidly and a period of intense bitterness began which lasted well into the 1930s and was much aggravated by the depression and the subsequent retrenchment of salaries.

It was against this background that Indirect Rule, through the agency of tribal sheikhs and chiefs, was introduced, which soon replaced Direct Rule as the guiding principle in administration. Tribalism, which had been greatly weakened during the Mahdiyya, was revived and encouraged not only for purposes of administrative decentralization but also, and more importantly, as an alternative to bureaucratic government which necessitated the creation and employment of more and more educated Sudanese. These, because of their education, however limited, were politically more conscious than tribal leaders and therefore

more difficult to control. Simultaneously with the stimulation of tribalism and tribal institutions therefore, training centres such as the military college were closed down; courses for training Sudanese administrators were discontinued; and harsh discipline which "savoured strongly of the barracks" was introduced in the Gordon College—an elementary institution which had been opened in 1902 for the training of artisans and junior officials. In general, the period from 1924 to the mid-thirties may be described as the golden age of Indirect Rule, or Native Administration: but from the point of view of education—always, under the British, closely connected with policy and administration—it was, in the words of a distinguished British scholar, "a period of utter stagnation". Economically however it was notable for the development of the Gezira scheme, whose cotton crops were largely responsible for the growth of the government's revenue from £1,654,149 in 1913, when the budget was balanced for the first time since the reconquest, to over £S₄ million in 1936 and nearly £S₄6 million in 1956. Today the scheme covers over 1,500,000 acres and is the basis of the country's prosperity.

The introduction of Native Administration in the Northern Sudan after 1924 was paralleled in the south, by the launching of the government's new "Southern Policy". Until then official policy in the south was, apart from the maintenance of law and order, largely limited to the provision of various forms of assistance to Christian missionary societies which, in the words of an official Annual Report, worked for the proselytization of the population and "teaching these savages the elements of common sense, good behaviour, and obedience to government authority". After the rising of 1924 which, incidentally was led by an officer of southern (Dinka) origin, the "Southern Policy" was introduced. It had two main objectives: the prevention of the spirit of nationalism, which had already taken root in Egypt, from spreading across the Northern Sudan to the south and to other East African "possessions"; and the separation of the three southern provinces from the rest of the country with a view to their eventual assimilation to the government of neighbouring British territories which, it was hoped, would then emerge as a great East African Federation under British control. Accordingly, Muslim and Arabic speaking people in the south, whether they were of Egyptian, northern Sudanese or west African origins, were evicted from the region while stringent systems of permits and "Closed Districts" were introduced to prevent others from entering. Southerners, on the other hand, were discouraged from visiting or seeking employment in the north, and those among them who had adopted the Muslim religion or used Arabic names, clothes or language were persuaded, by administrative means (which sometimes involved the burning of Arab clothes) to drop them and use, instead, Christian, English or native equivalents. Whereas education was then stagnating in the north and had so far been neglected in the south it was now enthusiastically supported by the government—but along lines calculated to eradicate all traces of Islamic and Arabic culture, and thus gradually sever relations between the northern and southern provinces.

TOWARDS SELF-GOVERNMENT

As may be expected the Southern Policy, like Native Administration, was most unpopular with the nationalists who by the mid-1930s had recovered from the shocks they had suffered after the failure of 1924 Encouraged by the challenge which the Axis powers were then presenting to Britain and by the restoration of Egypt's position in the Sudan in 1936 itself largely the result of the changing international scene they began to mobilize themselves and prepared to resume their offensive The Graduates' Congress representing the literals of the country, was established early in 1938 Stimulated by the war, the Atlantic Charter and the open competition of the Egyptian and Sudan governments for their sympathy and support the graduates in 1942 submitted to the government a famous Memorandum in which they demanded inter alia the abolition of the Closed Districts Ordinance the cancellation of subventions to missionary schools and the unifications of syllabuses in the north and the south increasing the share of the Sudanese in the administration of their country and the issue of a declaration granting the Sudan the right of selfgovernment directly after the war The government rebuffed the graduates by refusing to receive their Memorandum but nevertheless proceeded to react, on the local level, by the gradual transformation of Native Administration into a modern system of local government and, in central government administration, by launching, in 1943, an Advisory Conneil for the Northern Sudan which was replaced, in 1948, by a Legislative Assembly for the Sudan as a whole The development of local government however, was a very slow process (the first comprehensive local government Ordinance being promulgated as late as 1951) and it was in any case peripheral to the main wishes of the nationalists The Advisory Conneil and the Legislative Assembly on the other hand failed to satisfy them because among other things, they had very little power to exercise (in the case of the Council no power at all), while their composition, largely based on the principle of appointment rather than free elections. only partially reflected political opinion in the country

The limitations of the Council and the Assembly notwithstanding the promulgation of these institutions had the effect of accentuating differences within Congress and eventually splitting it into two rival groups Some worned about Egypt's continued claims over the Sudan, and feeling that independence could best be achieved by co-operating with the govern-ment thought that Congress should participate in the Council and the Assembly however defective they were This group, led by the Umma Party, was supported by the Mahdists and their motto was 'The Sudan for the Sudanese" Others being more distrustful of the British felt that independence could best be achieved through co-operation with Egypt which was an Arabic speaking and Muslim neighbouring country and, like the Sudan despite its formal independence, a victim of British imperialism They therefore stood for 'The Unity of the Nile Valley and supported by the Khatmiyya, the chief rival of the Mahdists among the religious fraternities, boycotted both the Council and the Assembly

In the meantime successive negotiations between the British and Egyptian governments led from one deadlock to another and the unhappy schism between the Unionsity and the Independence Front' continued until the outbreak of the Egyptian Revolution in July 1932. The new regime promptly disowned the lang and the Pasha class with whom "The Unity of the Nile Valley under the Egyptian Crown' was a basic article of political faith and thus cleared the way for a separate settlement of the Sudan question Negub Nasser and Salah Salem all of whom had served in the Sudan and those the Sudanses well, then staged a diplomatic coup which put the initiative in their hands

The British had consistently justified their contiqued presence in the Sudan in terms of their desire to secure self-determination for the Sudanese as opposed to imposing on them a unity with Egypt which many Sudanese were prepared to resist by force of arms if necessary Having got rid of the king the new Egyptian régime now declared that it was equally willing to grant the Sudanese the right of selfdetermination On the basis of this declaration an Anglo-Egyptian Agreement was signed in 1953 This Agreement provided among other things, for the Sudanization of the police and the civil service and the evacuation of all British and Egyptian troops in preparation for self-determination within a period of three years Elections, held under the supervision of an international commission, resulted in the victory of the National Unionist Party, whose leader Ismail El Azhati became the first Sudanese Prime Minister in January 1954 and proceeded to put the terms of the Agreement into effect The Egyptians had supported the NUP during the elections and it was naturally expected that Azhari would try to lead the country in the direction of union with Egypt However, by the time the Sudanization programme was completed and the Egyptian and British troops had left the country, it was clear that he stood for independence Several reasons led to this apparent reversal of attitude Among these was the fact that the overwhelming majority of the NUP had looked upon solidarity with the Egyptians as a means for achieving the in-dependence of the Sudan Besides, the official opening of Parliament of March 1st, 1954, witnessed a Violent demonstration by the Mahdists of their determination to split the country if the government wanted to lead the Sudan along the path of unity with Egypt rather than independence Several people were killed and the ceremony to which guests from many countries including Gen Neguib, had been invited, was postponed It then became obvious that independence would not only satisfy the aspirations of the Sudanese but would also save the country from civil war One thing, however, could still frustrate the country's progress to independence namely the mutiny of southern troops at Juba in Angust 1955 This was the prelude to an attempted revolt in the south in which nearly three hundred northern Sudanese officials. merchants and their families were massacred The disorders except for some sporadic outbursts, did not spread to the two provinces of Upper Nile and Bahr LI Chazal but were centred in Equatoria Order was

restored in due course but the political problem of the south which, springing from the geographic and social differences between the northern and southern provinces, had been greatly accentuated by the "Southern Policy" of the British administration, continued to present a serious challenge to the Sudanese and the unity of the Sudan. Before they could vote for independence southern members of Parliament insisted that their request for a federal form of government be given full consideration. This they were duly promised.

The agreement had prescribed a plebiscite and other protracted procedures for self-determination. Azhari, supported by all Sudanese parties, decided to side-step these arrangements, and on December 19th, 1955, Parliament unanimously declared the Sudan an independent republic and, at the same time, resolved that a committee of five elected by Parliament to exercise the powers of the Head of State in place of the Governor-General. Faced with this fait accompli Britain and Egypt had no choice but to recognize the Sudan's independence, which was formally celebrated on January 1st, 1956.

INDEPENDENT SUDAN

Immediately after independence the Sudan sought to establish itself in the international field and was soon afterwards unanimously accepted as a member of the UN, and in regional organizations such as the Arab League and later the OAU. Internally, the social services were expanded; the University College of Khartoum was raised to full university status; railway extensions on the Blue Nile south of Sennar and from Darfur to El De'ain were completed; and the first stages of the Managil extensions began operating, in July 1958, with a gross irrigable area of 200,000 acres, the whole scheme, involving some 800,000 acres, being completed in 1961. The administration, despite the difficulties which inevitably followed the rapid Sudanization programme, overcame the increased responsibilities with which it was charged. But financial and economic problems arising from rapid expansion on the one hand and difficulty in selling the cotton crops of 1957 on the other began to brace the whole country and, coupled with difficulties on the political plane, resulted, in 1958, in the replacement of parliamentary government by the military regime of General Ibrahim Abboud.

The political problems in which the country was involved soon after independence began with a split which took place within the ruling N.U.P. between the Khatmiyya and the non-sectarian elements in the party. This was accompanied by an agreement between the leaders of the two religious fraternities, the Mahdists and the Khatmiyya, which was reflected in the political field by the final replacement of Azhiri by a coalition government which was formed by the Umma Party, representing the Mahdists, and the newly formed Peoples Democratic Party, the political organ of the Khatmiyya. The new Prime Minister was Sayed Abdalla Khalil, the secretary of the Umma Party and a retired officer of the Sudan Defence Force.

The unprecedented coalition of Mahdists and

Khatmiyya at first seemed to work reasonably well. but difficulties soon began to appear. One of these was the traditional difference of attitude towards Egypt which had always existed between the two but had been temporarily forgotten during the final stages of the country's progress towards independence. During the Suez crisis for example the P.D.P. felt that the Sudan should have given greater support to Egypt than the Prime Minister was prepared to give. And when a minor dispute arose between Egypt and the Sudan in February 1958 the P.D.P. was in turn accused by some Umma spokesmen of softness towards, if not actual complicity with, the Egyptians. Another point of difference arose over the constitutional future of the country. For while the Umma Party favoured a presidential form of government and felt that its patron, Sayed Abdel Rahman Al Mahdi, should be the first president, the P.D.P. and behind them, the Khatmiyya, could not agree. A third difficulty arose from the deteriorating financial and economic situation which having initially resulted from failure to dispose of the cotton crop of 1957 was made even worse by an exceptionally poor crop in 1958. With the country's reserves falling rapidly, severe and unpopular restrictions had to be imposed and foreign aid sought. But the P.D.P., already worried by what it considered was the unduly pro-Western foreign policy of the Prime Minister, opposed acceptance of American aid.

Elections held in February 1958 resulted in no change and the already strained Umma-P.D.P. coalition was restored to power. If either party had been able to win a sufficient number of seats to form a government of its own the course of subsequent events would have been different. After hard negotiations the N.U.P. and the Umma Party agreed, on November 16th, 1958, to form a new government. But Abdalla Khalil did not view this move with favour, and having been an officer and having therefore close relations with the army, he consulted with a group of senior officers about the possibility of an army coup.

MILITARY GOVERNMENT

The coup d'état was launched on November 17th, 1958. To the people in general it came as a relief after the wrangling and differences of the parties. Gen. Abboud assured the country that his aim was restoration of stability and sound administration at home, and the fostering of cordial relations with the outside world, especially the U.A.R. For the politicians and those Sudanese who prized the Sudan's democratic institutions, however, the coup, followed by the suspension of the constitution and the dissolution of parliament and the parties, was a serious setback. But there was at first no sign of active opposition and the two leaders, Al Mahdi and Al Mirghani, gave their blessing to the new regime on the understanding that the army would not stay in power longer than was necessary for the restoration of stability.

The military regime made a good start in the economic field by following a realistic cotton sales policy which ensured the sale of both the carry-over from the past seasons and the new crop. Loans from

vanous international institutions and aid from the USA, the USSR and other sources were successfully negotiated. The money was used to finance such projects as the completion of the Managli extension and the construction of the Roseires Dam on the Blue Nile and the Khashim Al Girba Dam on the Atbara, the latter being used for the purpose of irrigating an area for the resettlement of the people of Halla, whose ancient town has now been submerged by waters of the High Dam at Aswan

In spate of these efforts discontent soon began to grow Prompting this was the feeling that too many officers—encouraged by the absence of democratic procedures of control and accountability—had become corrupt and used public funds for private gain. The result was that when the country was again gropped by financial and economic difficulties in 1965 the public was convinced that this could not be accounted for in terms of the poor cotton crop of that year, nor in terms of over-ambitious economic development schemes, in a word, they no longer trusted the gos emment.

In the field of administration other than financial. the military regime was again unfortunate. In July 1961 a new system of provincial administration not unlike Pakistan's "Basic Democracies" was maugurated This was crowned in 1962 by the creation of the Central Council which met for the first time in November 1961 The idea was to train the people in responsible self government through institutions which, it was said would be more suitable to their genius than imported ones such as Westminster-type parliaments and the administrative system inherited from the pre-independence era. While this was, to most people, perfectly acceptable in principle, the actual working of the new system-under the close supervision and control of military personnel-turned out to be very different from the professed ideal Friction between army officers on the one hand, and civil servants and other professional administrators on the other, resulted in the alienation of this important section of Sudanese society. Therefore, when the civil service was called to join the judiciary, university staff, workers and others in the general strike which took place after the outbreak of the revolution in October 1964 the response was both complete and enthusiastic

THE CIVILIAN COUP

The immediate cause of the revolution was the Coverment's neavy handed administration in the southern provinces. This was hased on the instalken idea that the problem of the southern Sudan was a military, not a political problem and that it was mainly the result of the activities of the imsisonances who had participated in the implementation of the "Southern Policy" of the British administration But the expulsion of the imissionaries in February 1964 dramatized the problem for the outside world rather than helped to solve it, while military action against both the Angan Nya rebels and the civitian villagers who were sometimes obliged to give them food and shelter, had the effect of forcing thousands of southern-

ers to live as refugees in neighbouring countries and convinced many that the only solution of the problem was for them to have a separate and independent state in the south Concerned for the unity of the country, politicians university students and others started campaigning for the view that the country could not be saved except by the removal of the military from authority and the restoration of democratic government Orders forbidding public discussion of the southern problem and other political matters were issued but were defiantly disregarded by students On October 21st the police, determined to break up such a discussion, opened fire on students within the precincts of the university One of the students died, and thus the revolution was set into motion A general strike brought the country to a standstill and General Abbond was forced to start negotiations with a Committee of Public Safety to which he subsequently agreed to surrender political power. His decision was partly dictated by the fact that the army was known to be divided, and the younger officers especially were reluctant to open fire on unarmed civilian demonstrators with whom they generally sympathized

A transitional Government in which all parties, including for the first time the Communist Party and the Muslim Brotherhood were respresented, was sworn in on November 1st. The Prime Minister was Surt Al Khatim Al Khalifa of the Ministry of Education He had worked for many years in the south and was much respected by southerners. The ministers of interior and communications were southerners As a result of the inclusion as ministers of representatives of the communist-dominical Workers' and Tenants' Trades Unions and certain front organizations, the cabinet as whole was dominated by the Communist Party, which had played an active part in mobilizing opinion against the military regime

After restoring the freedom of the press, raising the ban on political parties, and starting a purge of the administration (which was subsequently abandoned on account of its being carried along partisan lines), the new government turned to the most important problem facing it the problem of the southern Sudan One of the first acts of the government had been a declaration of a general amnesty in the south which was accompanied by an appeal to southern leaders inside and outside the country to help solve the problem by peaceful means.

On March 16th, 1965, a Round Table Conference in which northern and southern parties participated was opened in Khartoum It was also attended by observers from seven African states The northern parties proposed to set up a regional government in the south which would have its own parlament, executive public service commission, development committee and university The southern parties which attended the conference were divided Some wanted federation others a separate state, while the unionists (who wern not represented in the conference because the two other groups threatened to boycott it if they were allowed to participately favoured the status quo The federalists and the separatists eventually agreed to demand a referendum to enable southern voters to

choose between the three alternatives of regional government, federation and separation. By March 30th however no general agreement between the northern and southern parties was reached over the constitutional future of the country, and the subject was referred to a Twelve Man Committee, on which all parties (except the Southern Unionists) were represented. In the meantime the conference agreed on a constructive programme of immediate action which included the repatriation of refugees and the restoration of order, freedom of religion and unrestricted missionary activity by Sudanese nationals, and the training of southerners for army, police and civil service.

Externally the transitional government broke with the traditional neutralism which had characterized Sudanese foreign policy since independence, and supported national liberation movements in Southern Arabia, in the Congo, and among the Eritreans in Ethiopia. But this, like the purging of the administration, was controversial and was especially disliked by the leaders of the two main traditional parties, the Umma and the N.U.P., who together with the Islamic Charter Front (at the core of which was the Muslim Brotherhood) formed a front against the more leftwing P.D.P. and the Communist Party. The former felt that elections should be held as soon as possible so that a representative and responsible government could be formed, while the latter, who could not hope to improve their position in the country through elections, favoured the continuation of the new policies.

Elections were held in June 1965. They were hoy-cotted by the P.D.P. but were heavily contested by all other parties, including the Communists. The Umma Party won the greatest number of seats, 76, followed by the N.U.P. who won 53. Neither part was however in a position to form a government on its own. The Communists won 11 out of the 15 seats in the graduates' constituency and had the further distinction of having among their representatives the first Sudanese woman M.P. Other seats were won by the Islamic Charter Front (7) and, for the first time, tribal groups representing the Beja (10) and the Nuba of Kordofan (11).

COALITION GOVERNMENT

It was obvious that the new government had to be a coalition. After some discussion the Umma and N.U.P. agreed to form a government in which Mohamed Ahmed Mahgoub (Umma) became Prime Minister and Azhari the permanent President of the Committee of Five which collectively acted as Head of State.

The new coalition at once ran into difficulties over the southern question. In July there was serious rebel activity at Juba and Wau, and large numbers of southerners were killed in the course of reprisals by Government troops. There were also severe difficulties in retaining southern representation on the Government; two members appointed by SANU, the leading southern nationalist party, were withdrawn when Buth Dieu, Secretary of the Southern Liberal Party, was appointed Minister of Animal Resources in August. Personal animosity between the President of the Supreme Council, Al Azhari, and the Umma Party, Premier Mahgoub, led to a crisis within the coalition in October, which was only solved by the mediation of the young Umma Party President, Sadik el Mahdi. Government policies meanwhile became increasingly right-wing, as when, in November 1965, the Communist Party was banned and its members unseated from the Assembly. This act was contested in the courts, which in December 1966 ruled that it was illegal. But the Constituent Assembly, acting in its capacity as constitution-maker, overruled the courts' judgement. A crisis in which the judiciary and the Assembly confronted one another was thereby precipitated, but this was finally resolved in favour of the Assembly.

In order to pacify Ethiopian opinion, which had been provoked by the discovery in the Sudan of a consignment of arms from Syria destined for the Eritrean rebels, and the Chad Government, which was concerned about the possibility of a conspiracy being hatched against it on Sudanese soil, the new Prime Minister hastened to affirm his government's adherence to the Accra pledges of non-interference (in the case of Ethiopia signing a border pact in June 1966). This was followed by a number of visits to neighbouring countries with the purpose of confirming the new government's position in this respect and, at the same time, making arrangements whereby the return of Sudanese refugees from these countries would be facilitated.

SADIK EL MAHDI ELECTED PREMIER

In the meantime a serious split was developing between the right wing of the Umma Party, led by Imani el Hadi (Sadik's uncle), which supported Premier Maligoub, and the younger and more moderate elements who looked to Sadik for more effective leadership. Sadil:, however, was reluctant to accept the Premiership not only on account of his young age (30), but also because failure (which was likely, in view especially of the mounting financial and security problems of the country) would prejudice his political future. But events, particularly the growing split within his party, and the pressure of his supporters, finally obliged him to change his mind. After a heavy defeat in a vote of censure, on July 25th, 1066, Mahgoub resigned and Sadik was then elected Premier. His government was also a coalition of Umma and N.U.P. but included, as Minister of Finance an independent expert of Khatmiyya background, Hamza Mirghani, who in 1961 had resigned his post as Principal Under-Secretary of the Ministry of Finance, and had since worked with the IBRD. There were also two southern Ministers.

The new government at once addressed itself to the two major problems of the country. With the help of stringent controls, on the one hand, and loans from the IBRD and IMF, the economy gradually began to recover, and the country's reserves of foreign currency, which had dropped to the alarming level of £S14 million, began to improve. Meantime the Twelve Man Committee had made considerable progress towards

the settlement of the southern problem on the base of regional government A "Parties Conference" continued the Committee's work and, in April 1967, submitted a report in which it also recommended a regional solution By this time the long awaited supplementary elections in the south had been held, bringing 36 members to the Constituent Assembly, of whom 10, led by William Deng, represented SANU, the leading southern party. It was now possible to speed up the process of drafting the permanent constitution and the settlement, inter alia, of the southern problem.

The relative success of Sadik's mne-month-old administration, however, coupled with the amouncement that he would stand for the post of President under the proposed constitution, resulted in the break-up of the coalition between his wing of the Umma Party and the N UP, whose leader, Arbarn, like the leader of the Ansar, Imam el Hadi, also aspred to the Presidency Thus, on May 16th 1967, Sadik was defeated in the Assembly (111 against 91) and Mahgoub was, once again, elected Premier

MAHGOUB RETURNS TO POWER

Under his leadership the new coalition of NUP. and El Hadi's branch of Umma pursued a vigorous foreign policy, particularly in the Middle East after the Six Days War As a result, the first Arab Summit Conference after the war was convened in Khartoum (August 1967) and Mahgoub, together with Iraqi and Moroccan colleagues, was subsequently entrusted with the task of finding a formula for the settlement of the Yemeni dispute Deterioration of relations with the Western Powers, culminating in the severance of diplomatic relations with the United Kingdom and the USA after the June War, was accompanied by the development of closer relations with the Eastern bloc, and the conclusion of an arms deal with the USSR resulted in the lifting, without formal announcement, of the ban which had previously been imposed on the Sudanese Communist Party

The internal affairs of the country particularly the already precarious financial situation had in the meantime heen somewhat neglected. The result was that when the Constituent Assembly was reconvened after the prolonged recess which followed the outbreak of hostilities in the Middle East, the opposition under the vigorous leadership of Sadik Cl Mahdi and William Deng (who, together with the ICF, now formed the New Forces Congress) was able to defeat the Government on several occasions. This together with the growing PDP and Communist opposition to the Draft Permanent Constitution based on Islamism regionalism and a strong executive on the presidential model, induced the Government to dissolve the Constituent Assembly on January 7th, 1968, following a mass resignation of government members in the Assembly Sadik and his allies contested the constitutionality of this act in the courts Before any judgement was pronounced, however, new elections were held in April, which were contested for the first time since 1958 by the PDP, now merged with the NUP in the new Democratic Unionist Party This won the largest number of seats, 101, followed by Sadık's Umma, who won 38, and El Hadr's Umma, with 30 scats As the DUP did not command a majority on its own, a new coalition, also with Imam El Hadi's faction of the Umma Party, and under the leadership of Mahgoub, was formed when the Assembly was convened on May 27th Like its predecessors since independence, Mahgoub's third government had to address itself to three principal tasks drawing up a permanent constitution, rescuing the country from threatening financial and economic collapse resulting from its dependence on one cash crop on the one hand and poor financial administration on the other, and finally, tackling the problem of the Southern Sudan The latter problem had been awaiting settlement ever since the attempted revolt in Equatoria province in 1955, and had become even more pressing from 1963 onwards with the onset of regular engagements between Sudanese troops and southern rebels in the Upper Nile and Bahr El Ghazal provinces as well as Equatoria Estimates of numbers killed in the fighting run into thousands and government action in the south has been strongly criticized by Roman Catholic missionanes there who at the end of 1966 accused Sudanese troops of indiscriminate attacks on civilians Successive central governments have tended to minimize the severity of the situation but the size of the problem can be gauged from the presence in neighbouring Uganda of 163 000 refugees and in the Congo (Kinshasa) of 40 000 (estimates of UN High Commissioner for refugees, July 1968) Relations with Uganda have been strained as a result of Sudanese border actions connected with southern refugees, and also by the use of Kampala as a base for the southern separatist groups

THE 1989 COUP

The failure of the Mahgoub government to deal with either the southern Sudanese problem or the economic situation was compounded by the cabinet crisis of April-May 1969 over the reallocation of ministerial responsibilities between the Umma and Democratic Unionist Parties. The result was the bloodless coup of May 25th, 1969, when the government was overthrown by a group of officers and civilians led by Col (later Maj Gen.) Jaafar al Nemery The Transitional Constitution Supreme Council of State and Constituent Assembly were all abolished and a "Democratic Republic of the Sudan" and National Revolutionary Council with absolute powers established The only civilian member of the Council, Abu Bakr Awadalla, the former Chief Justice, was appointed Prime Minister of a twenty-one-man cabinet, five of them members of the Sudan Communist Party All political organizations were later dissolved, and several former ministers were tried on charges of bribery and corruption, rumours of which had been rife before the coup

The new government stated the day after the coup that it was committed to a policy of "Sudanese socialism" under which the battle against Israel would play an important role in foreign relations and

the state would participate to a greater extent in the eeonomy, while preserving freedom for foreign and indigenous capital. The more militant attitude of the new regime towards the Middle Eastern question was quickly emphasized by its decision to recognize the German Democratic Republic, because of that country's hostility to Israel, and its refusal to consider re-establishing relations with either Federal Germany or the U.S.A., because of their support for Israel. The alliance formed with the U.A.R. and Libya in December 1969, and the announcement of federation in November 1970, marked a major step in the Sudan's involvement in Arab politics. A united western front was thus formed against Israel, and Libyan finance and Egyptian skilled manpower became available for Sudan's development programme. Both the U.A.R and Libya have nationalized most of the foreign economic interests operating within their boundaries, and the Sudan followed suit in May 1970 by taking over all foreign banks and the principal trading companies, including the cotton exporters and some domestically owned organizations However, Sudan's participation in the federation, joined in April 1971 by Syria, has been postponed because of the war in the south and because of the opposition of the communists. In May it was announced that a Sudanesc Socialist Union was to be formed. Such a development, like the similar one announced in Libya, will presumably speed integration with the other countries of the federation.

Sudan's policy towards Palestine has naturally enough reflected the U.A.R.'s since 1969. The Rogers plan has been accepted; the fighting in Jordan deplored. President Nemery headed the conciliation committee which secured a cease-fire between the Jordanian army and the Palestine commandos at the end of September 1970. On Sudan's southern front relations with Uganda have been strained. In addition to the normal border tension trouble has been caused by supporters of deposed Ugandan president, Milton Obotc, operating against General Amin's new regime from within Sudan's borders.

The pronounced commitment to the Arab cause did not slow up the new government's determination to tackle the problem of the three predominantly black southern provinces, and on June 10th, 1969, Gen. Nemery announced plans for the training of southern Sudanesc for positions of responsibility and for eventual self-government for the south. Since then southerners have been appointed to ministerial, diplomatic and other high posts. Joseph Garang, a Catholic from the south and a communist, headed a Ministry for Southern Affairs until his exceution in July 1971 for taking part in the abortive coup. Special efforts have been made at reconstruction and develop-

ment in the south, the latest series of measures being announced in January 1971. However, these measures have produced a mixed reaction among the rebel groups, and the fighting continues, with the rebels receiving aid from Israel and the government, it is reported, assistance from Soviet advisers. Three ministers from the south were included in the cabinet formed in August 1971, perhaps to mollify southerners upset by the execution of Joseph Garang.

Since the 1969 coup there have been various reported attempts to overthrow the regime. For some time the chief source of opposition was the Mahdi family, whose property had been confiscated after the coup. In March 1970 a rebellion led by the Imam al Malidi from his stronghold of Aba Island in the White Nilc was crushed by the government with many deaths, including that of the Imam. Later it was the communists who were accused of working against the government. Three ministers and thirteen army officers were dismissed in November 1970 for sympathizing with the Sudancse Communist Party, and the party's secretary-general was arrested. In February 1971 President Namery expressed his intention of destroying the party, but it was the communists who moved first to remove him. On July 19th, 1971, a section of the army, led by communists, overthrew the Nemery régime, and Col. Babakr al Nur was proclaimed head of state. However, while Col. al Nur and his assistant, Maj. Farouk Hamadallah, were returning from London to take command of the revolution, the B.O.A.C. plane carrying them was forced to land in Libya. They were taken off, and the Libyan Government later handed them over to President Nemery, who had regained power in a counter-coup three days after being ousted. A massive purge of communists followed, and fourteen people were executed almost immediately. Apart from Maj. Hachem al Atta, who set the coup in motion in Khartoum, and the two leaders back from London, the Communist Party's Secretary-General, Abdel Khalik Mahgoub, the Secretary-General of the Federation of Sudanese Workers' Union, Shafieli Ahmed el Sheikh, and Joseph Garang, were all climinated after hurried and secret trials before a military tribunal. The purge brought condemnation in unusually forthright terms from the Soviet and East European governments, though diplomatic relations have so far remained intact. President Nemery has received strong support from President Sadat of the U.A.R., and the alliance of Sudan, the U.A.R. and Libya has drawn eloser, with the Soviet Union's position in the Middle East correspondingly weaker.

M.A.-R.

ECONOMIC SURVEY

THE MAIN CHARACTERISTICS

It hardly needs stating that Sudan is an agricultural and pastoral country Agriculture including livestock and forestry products contributed more than 50 per cent of the gross domestic product in 1967-63 Animal wealth though very undeveloped contributes about to per cent of the G D P while the share of forestry products in the GDP is about the same However the contribution of fish and marine products is only about 2 per cent The significance of agriculture in the Sudanese economy is also reflected in the distribution of manpower among the different economic sectors About 85 per cent of those economically active (according to 1955-56 figures) are engaged in primary production Manufacturing industries contributed only about 2 per cent of the GDP np to 1962-63 while the share of minerals is less than I per cent No important minerals have yet been found in Sudan in significant enough quantities to be exploited economically Sudan not only depends on agriculture but on one main crop for its exports. In fact the share of extra long staple cotton in the exports of Sudan reaches more than 70 per cent in some years Such dependence on one major export crop with wide fluctuations in price and quantity exported has caused political as well as economic instability

Furthermore about 48 per cent (on 1962-6) figures) of the G D P is produced in the traditional sector and about 25 per cent, it is estimated as produced and consumed in the subsistence sector. With such a traditional agricultural sector it is not surprising that Sodan has a low per capita income which was only £3 22 (£1 sterling=£5 0 8) 18) at current prices in 1962-63 and which could not have risen much ance excoming has been growing at an annual rate of about 4 per cent while the population has been growing annually at a rate of about 2 8 per cent.

The average density of population in Sudan is low and there is no population pressure on the available resources at present Open unemployment is very miscincant. In fact Sudan suffers from a shortage of labour particularly during the cotton picking season Sometimes this problem is solved by immigrant labour from neighbouring countries.

Perhaps one of the most sinking features of the Sudanese economy is the dominant role which is played by the public sector in all important economic securities. The government aside from its day to-day administrative financial and fiscal efforts owns the majority of modern capital establishments in the economy. In the ten year plan the share of the government was 15337 million out of the total investment of £5655 million. In the period 1955/56-266-769 the share of the government in gross fixed capital formation ranged between a half and two thirds. The government is not only the chief investor in public withitse buttits the main promoter of industries such

as sight cotton ginning food processing tanning and printing Gorenmental efforts to develop the country have expanded to such an extent that all large hotels in the various parts of Sudan are owned and managed by the government. With the nationalization of all commercial banks and several leading commercial firms in May and June 1970 the economic significance of the public sector has become even greater.

AGRICULTURE

The availability of water is the governing factor for agriculture in Sudan. In most parts of the rainlands of Sudan drinking water for humans and animals is a crucial factor especially before the rainy season when land is prepared for cultivation and after it during harvest time However land does not impose any constraint on the agricultural development of the country The cultivable land is estimated to be about 200 million feddans (one feddan = 1 038 acres) Only about 8 per cent of this cultivable land is being utilized in agriculture and less than four million feddans are under irrication. Half of this area is in the Gezira scheme (with its Managil extension) and the rest is irrigated by the flood waters of two small nvers in eastern Sudan Gash and Baraka by the flood waters of the Nile and by pumps

Prior to the hile Waters agreement of 1050 the distribution of water between Sudan and the U.A.R. was governed by the Nile Waters agreement of 1020 which allocated four milliard cubic metres to Sudan However with the 1959 agreement and the construc tion of the Roseires and Khashm el Girba dams the water problem has been solved Sudan is now entitled to draw 18 5 milliard cubic metres at Aswan High Dam or the equivalent of about 20 5 milliard cubic metres in Sudan and the way has been opened for considerable expansion of arrigated agriculture. At present Sudan is drawing about half of its entitle ment-about ten miliard cubic metres annually-but with the development of new areas along the White and Blue Nile Atbara River and the Main Nile as well as the intensification of the Gezira scheme by reducing fallow and its diversification by such crops as wheat groundnuts and philipesara regetables Sudan is expected to utilize all its entitlement within the coming five years or so One of the main develonment projects in Sudan is the Rahad project which will need about four mulliard cubic metres of water for an area of about half a million feddans. The Sukki project which has also started may reach an area of 170 000 feddans while the pump-irrigated areas of the Northern Province may increase by about 165 000

In spite of the significant role played by irrigation (particularly gravity irrigation) in the economic de velopment of Sudan the rainlands are more important In 1957–63 out of 9 7 milhon feddans which was the total area under the main crops 7 9 million feddans were rainlands o 2 million feddans were

feddans within a few years to come

irrigated naturally by flood and 1.6 million feddans irrigated artificially. With the exception of cotton, pulses and a proportion of groundnuts, Sudan's foodstuffs and most exported agricultural products come from the rainlands. In fact Sudan is self-sufficient in the essential foods: millet, meat, edible oils and salt. However, the output per feddan in the rainlands is low. Rainlands agriculture is a somewhat risky business and to some extent this has probably deterred investment and modernization. The government has already taken steps to encourage large farming units and agricultural mechanization. This type of cultivation is mainly practised in the Gedaref area, in Kassala Province and the Dali and Mazmoum regions of the Blue Nile Province. The total area has increased considerably since 1955-56. In peak years, the total area reaches about 1.5 million feddans. The area shows considerable fluctuations, which are mainly due to changes in the prices of dura. In these areas dura is the main crop, but sesame and American cotton are also grown.

The agricultural sector of the Sudan does not face any serious land tenure problems. The rainlands, in particular, are very free from such problems, and also enjoy the advantage of relatively low production costs. The present government has already started an anti-thirst campaign and has promised the economic and social development of those areas. The Ten-Year Plan (1961/62-1970/71) was more concerned with the modern sector and the irrigated lands.

Sudan has animal wealth which contributes about 10 per cent of G.D.P. annually. It was estimated in 1968 as 10.9 million cattle, 10.1 million sheep, 8.5 million goats and 2.3 million camels. Its annual share in Sudan's exports (animals, hides and skins) has been about 6 per cent for the last five years.

In the year 1962-63 forest reserve estates, which are completely owned by the government, increased by 7,000 feddans to a total of 2,574,000 feddans. Beside gum arabic, the other important forest products are the various types of timber which are processed by the forest department of the ministry of agriculture. In 1968-69 the forest department produced 90,000 railway sleepers, 595,000 poles and 4,500 tons of sawn timber. The main consumer of these products is the government itself.

Sudan is rich in fish and other marine resources. The inland fisheries cover more than 20,000 sq. km., while marine fisheries extend for a distance of about 700 km. along the Red Sea. It is estimated that the annual total value of the output of fish and marine resources in Sudan is about £S10 million. The output of fish from the Nile is 60,000 tons annually but only a small percentage of this wealth is utilized at present. Since the actual output of fish from inland fisheries is estimated at around 20,000 tons annually, therefore about 40,000, valued at £S4 million, are wasted.

The contribution of fisheries to Sudan's exports is small. The share of salted fish and shells (mother of pearl and torchus) is much less than I per cent of the total exports.

Cotton is the most important crop in Sudan from the economic point of view. It is the major export

crop, the chief exchange earner and the main generator of income in the Sudan. A proportion of it is consumed locally by the textile industry. Its average share of exports over the five years 1965-69 was 53 per cent. not including its by-products, and 63 per cent including them. The cotton is of two types: long-staple varieties, Skallarides and its derivatives (commonly known as Sakel) and short-staple varieties, which are mainly American types and are consumed locally. The Sakel varieties are exclusively for export and are grown in the large schemes of the Gezira and the Gash and Tokar deltas, while the American types are grown in the rainlands of Equatoria, the Nuba mountains. Gedaref and also in some of the pump schemes in the Northern Province. The volume of output of the American types fluctuates more than the Sakel, and in recent years was less than 20 per cent of the longstaple cotton. In 1967-68 the total production of Sakel was 440,033 tons, while the total production of American types was 86,832 tons.

Dura includes various types of sorghum millets. It is the most important staple food in Sudan and is mainly grown in the rainlands. Sudan produces annually about 1.2 million tons of dura, which is usually sufficient for domestic consumption. It is not an export crop, though in good years some is exported, as, for example, in 1962–63, when 68,635 tons were exported. In bad years the government may need to import some dura. However, there are still no adequate storage facilities for offsetting bad years against good years. So far there are only two grain silos in Sudan with a storage capacity of 150,000 tons.

With urbanization and social development the consumption of bread made out of wheat flour is increasing by about 10 per cent annually. There seems to be a shift in consumption from *kisra* made out of dura to bread made out of wheat. Wheat is grown mainly as a cash crop. A small proportion of rural people use wheat flour in their diet. To meet the rapidly expanding demand of the urban population the government is growing wheat in the Gezira scheme and other suitable areas. It is also paying a subsidy to encourage its production and at the same time keep the price of bread reasonably low. The government buys a ton of wheat from the farmer at £S38 and then sells it to the flour mills at £S28.7.

Sudan gums have been known in trade for at least two thousand years. Gum arabic, which contributes about 10 per cent of Sudan's exports, is the second export crop. It is the most important forest product and, though collected in the traditional sector, it is a purely cash crop. It is almost entirely exported, as the confectionery industry manufactures only a very small percentage of it. Sudan is the world's largest source of gum arabic, producing about 92 per cent of the total world consumption (1962-66). Two types of gum are produced in Sudan, Hashab from Acacia Senegal and Talh from Acacia Seyal. The former is of a superior quality. The annual production of Hashab gum in normal years ranges between 40,000 and 50,000 tons and that of Talk between 1,000 and 2,000 tons. Kordofan and Darfur provinces in western Sudan are the main production centres. The chief market for gum is at El Obeid in Kordofan Province, where it is sold by auction In order to stabilize the price of gum, the government formed the Gum Traders' Association in 1962 which was made responsible for huying any gum left in the market at a price not less than 288 plastres per kantar * A levy of 35 plastres was paid by exporters on every kantar of gum exported to enable the Gum Traders' Association to pay the minimum price This system was an improvement on previous methods but it was not satisfactory In September 1969 the government formed the Gum Arabic Company Ltd., a public concession company in which government participa tion is 30 per cent of the capital The company is now handling all the gum trade of Sudan with the ob sectives of promoting it, maximizing the returns to the country and to the producer and stabilizing gum prices

INDUSTRY

Industrialization usually starts in one of two basic ways, either with the processing of exports which were previously exported in their crude form, or with the manufacturing of import substitutes for an expanding home market, a surplus perhaps being exported later

The gaming of cotton encouraged the beginning of indisty in Sudan early in this century. With the expansion of cotton production the number of ginning factories have increased until the Gezira Board alone has the largest ginning enterprise under single management in the world. The processing of cotton has not gone beyond ginning. Cotton seeds are partly decorticated, while the exports of cotton seed oil and oil cakes are increasing. Groundnuts are also shelled for export In 1969 24 695 tons were exported in shell while 37 436 tons were exported shelled Minerals (copper, iron, muca and chromits), which constitute less than 1 per cent of exports, are exported in the crudest form.

However, the story of import substitution is different This type of industry, though of more recent origin than the industries which process for export, bas made more progress, and is expected to play a more important role in the economic development of the country With the exception of the soap soft drinks and oil pressing industries, large industries manufacturing import substitutes started only after 1960 The government was not involved in any industry until 1959 with the exception of the Zande scheme which involved a cotton mill at Nzara for promoting the social development of the Zande tribe From 1960 the involvement in industry began to increase and in 1962 the government formed an industrial development corporation to look after the large factories of the public sector By 1968 the Industrial Development Corporation was managing nine manufacturing factories in which the government has invested £S23 7 million. There are also factories in the public sector managed by the minis tries, such as the government printing press and the mint

The first factory to be established was the Guneid sugar factory, which in response to the great increase in the consumption of sugar in the 1950s, came into production in November 1961 with a capacity of 60 000 tons of refined sugar annually A second factory was needed to meet the local demand and m 1963 Khashm el Girba sugar factory was started, with a capacity similar to that of Guneid In addition to a tannery, opened in November 1961, the government also has five food processing plants one cannery and one date factory in Kareima, another cannery in Wan an onion dehydrating plant in Kassala and a milk factory in Babanousa What is very striking about these food processing industries is that the supply of raw materials is not high enough to match the productive capacity, and therefore, the weakness in these factories is not technical but agricultural

The private sector has also played an important role in the industrial development of this country. In the period 1960-69 the private sector invested £53.5 million in industries of which £51.6 million was Sindanese and £510.8 foreign capital. The foreign capital is thannly savings of foreign residents accumulated from the profits of the import and export trade. The bulk of the investment has gone into the textile, soap, oil pressing footwear, soft drinks printing packing flour, and knitwear industries.

The government has encouraged industrialization in Sudan by various means The Approved Enterprises (Concessions) Act 1959 gave generous concessions to infant industries. The Organisation and Promotion of Industrial Investment Act, 1967, has been even more generous to industry It gives exemption from the business profits tax for a number of years, depending on the size of the invested capital allows very high rates of depreciation, gives very fair treatment to losses reduces import duties on imported machinery and materials, protects domestic production by high taniffs and import restrictions and allocates hulding lands at reduced prices In addition to this the Industrial Bank, which was established in 1961, assists in the financing of private industrial enterprises with up to two-thirds of the capital required By the end of 1968 the value of loans given by the bank amounted to £S3 9 million

FOREIGN TRADE

The value of Sudar's exports rose from £55 4 million to £563 5 million in 1969 and the value of imports rose from £563 7 million in 1960 to £583 3 m

Gum is weighed in small kantars. Cotton is weighed in big kantars. r small kantar=44 928 kilogrammes. r big kantar=141 523 kilogrammes.

Merchandise trade dominates the current account, while the net balance on the invisible account is usually negative.

Sudan's main exports are primary agricultural products, and since the establishment of the Gezira scheme in 1925, cotton has dominated. The share of lint cotton alone has ranged between 46 per cent and 62 per cent over the period 1960-69. After 1960 the EEC became the largest buyer of Sudan's cotton, followed by India, the U.S.S.R., the People's Republic of China, Japan and east European countries. Gum arabic is the second export product and its average share is about 10 per cent of Sudan's exports. The main buyers of gum are the EEC, the U.S.A. and the U.K. In the last ten years, due to the expansion of production in the traditional sector, the relative importance of oil seeds as exports has increased and now groundnuts form the third most important export crop with a share of about 9 per cent of exports. The EEC is the largest buyer of Sudan's groundnuts (60 per cent). The east European countries buy about 20 per cent of the groundnuts and the rest go to various west European countries.

The major imports are vehicles, transport equipment, machinery, appliances and textiles. The growth of industries which are manufacturing import substitutes has affected the pattern of imports since the mid-1960s. The imports of sugar, footwear and cigarettes are declining in relative and absolute terms.

Perhaps a more striking change has taken place in the pattern of suppliers and buyers, if the late 1960s are compared with the early 1950s. The U.K. used to be the largest seller and buyer from the Sudan (30-40 per cent before independence). In 1969 only 6.7 per cent of Sudan's exports went to the U.K., and only 20 per cent of imports were bought from the U.K. The EEC is now replacing the U.K. and becoming the largest buyer of Sudan's cotton, groundnuts and sesame. However, the U.K. still has a large share of Sudan's imports of machinery, appliances, vehicles, transport equipment, chemicals, pharmaceutical products and cigarettes. Trade with socialist countries has been increasing since independence, and especially in recent years, as a result of several bilateral agreements. In 1960-69 the Sudan signed agreements with Bulgaria, Czechoslovakia, the German Democratic Republic, Yugoslavia, Hungary, Poland, China and others. The share of socialist countries in Sudan's trade is about 20 per cent of both exports and imports. Trade with the Arab countries has been expanding in recent years and exports to them have reached about 10 per cent, but imports from these countries form a smaller percentage. The Arab countries are a good market for Sudan's animals. Trade between the Sudan, the U.A.R. and Libya is expected to develop further as a result of an agreement on economic integration signed in May 1970. Furthermore, the summit conferences of east and central African heads of state and governments may increase trade between Sudan and east and central African countries in the near future.

FOREIGN AID 1960-1969

The Ten-Year Plan of Economic and Social Development, 1961/62–1970/71, is the country's first experience in planning, although there were three previous attempts to develop Sudan in a systematic manner: 1946–51, 1951–56 and the Managil extension programme. In contrast to the Ten-Year Plan, the development programmes were not comprehensive, being concerned only with some projects in the public sector and depending on finance from savings of the public sector.

The total gross investment of the plan was estimated to be £S565 million, of which 40 per cent (£S228 million) was to be sponsored by the private sector and 60 per cent (£S337 million) by the public sector. Out of the total investment £S415.9 million was to be financed by domestic savings and £S219.7 million from foreign financial assistance. The £S415.9 would consist of £S219.7 million public savings and £S196.2 million private savings.

The foreign aid actually received in the period 1960-69 has not fallen very much short of the target of the plan (see Statistical Survey). While £S150 million of foreign aid was forecast for the period 1961/62-1970/71, £S141 million of aid in the form of grants, long-term and medium-term loans and in kind was received in the period 1960-69. However, in spite of the small difference between projected and realized foreign aid, the plan could not be properly implemented, mainly because of a shortage of domestic and foreign finance.

The Khashm el Girba and Roseires dams could not be utilized fully because the lack of finance prevented the associated works being completed. Additional reasons, such as wastage and corruption, also contributed to hampering the completion of projects of the public sector. Foreign aid of about £860 million is needed in 1970 to complete the basic association projects, which will enable Sudan to utilize its investment reasonably well.

It is clear from the sources of foreign aid over the period 1960-69 that the International Bank for Reconstruction and Development has played an important part in the financing of development projects in Sudan. About 16 per cent of all foreign aid in the 1960-69 period has come from it. The Bank has financed very vital projects such as the Roseires Dam, mechanized farming, Sudan Railways extension and dieselization, and the Managil Extension. American aid, mainly given in non-project commodities, has also been important, constituting about 14 per cent of the total between 1960 and 1969. American aid to Sudan ceased when Sudan severed diplomatic relations with the U.S.A. in June 1967. Cumulative withdrawals up to the end of 1967 totalled £S23.3 million.

Aid to Sudan from Yugoslavia included a tannery, a cardboard factory and three ships, which constitute the Sudan Shipping Line. The U.S.S.R. has provided Sudan with two grain elevators, factories for processing agricultural and dairy products, a hospital and veterinary laboratories. Federal Germany also played an important role in financing the economic develop-

ment of Sudan between 1960 and 1969 hy contributing to the financing of the Roseires Dam, and credit from German firms belied in financing the Guneid and Khashm et Girba sugar facturies

The June War (1967), which brought about closer relations between the Arab countries bas increased the flow of Arab aid to Sudan. By the end of 1969 the drawings on Arab aid had reached f.82.2 millionmore than 30 per cent of the total foreign aid received between 1960 and 1969. In addition to this Sudan received f.813 million from the United Arab Republic, not as aid, but as compensation for the resettlement of Halfa town, caused by the construction of the Aswan High Dam.

The financing of public sector projects has manfy come from various governments, but firms have also played a part. For example Italian contractors granted a credit of £5.6 million to cover a part of the cost of the construction of Khasham el Grab dam and three Fokker acroplanes were obtained on a three year credit from the suppliers

During 1960-69 the Sudan government obtained short term loans from the IMF and some Dutch commercial banks. The Dutch commercial banks provided §509 million to finance about 90 per cent of the cost to the Sudan government of importing telecommunication equipment from Holland

There is no information about foreign loans to the private sector, but the two textile mills in the country were financed by foreign loans from the USA and Japan

At the end of 1969 the uet foreign debt outstanding in respect of government loans amounted to £5103 a million. This figure includes £518 million representing obligations to the IMF, but it excludes the amount's received under the different American aid programme⁸, before such aid was stopped in 1967 The balances still available for utilization in the future amount 40 £532 8 million.

Repayment of Icans in 1969 amounted to fSio 9 million, of which fSe's million was for principal and fSig million was interest. In 1968 and 1969, the Sidan Government secured sizable short term and medium term loans which bad the effect of increasing the debt servicing burden immediately. The ratio of debt servicing burden immediately. The ratio of debt servicing to export proceeds rose from 69 per cent in 1967 to 12 5 per cent in 1969. It seems advisable for Sudan to be more cautious about foreign borrowing because it will soon reach the limit of its credit worthness.

Looking to the future, now that a socialist government, which hast closs relations with other socialist countries is in power, and a five-year plan (1970-73) has just been prepared with the help of Soviet experts, it seems that socialist countries will be the main financiers of future economic development in Sudar According to the new five-year plan foreign loans will contribute \$595 million out of the \$5200 million capital investment by the public sector.

PUBLIC FINANCE

The Sudan government, like governments in many other underdeveloped countries, depends beavily on indirect taxes as a major source of revenue. In the fiscal year 1969-70 indirect taxes contributed 44 per cent of the central government's revenue, while in 1968-69 they yielded about 50 per cent In these two years the relative share of indurect taxes declined because of increased import restrictions, and also because of the increased revenue from direct taxes and proceeds from government agricultural enterprises, particularly in 1969-70 The main source of revenue from indirect taxation is import duties Because of balance of payments deficits in recent years the government has been trying to restrict imports of consumer goods particularly luxuries, and those which bear the highest rates. Excise duties are growing in importance because of the growth of industries producing import substitutes. Thus, the share of excise duties in revenue from indirect transition, 5 per cent in 1964-65 rose to 18 per cent in 1966-67 This change is also reducing the rate of increase of revenue from indirect taxation Excise duties are of lower rates than import duties on the same goods and they are more difficult to collect

The revenue from export taxes declined from §5.8 million in 1965-97 to [5.5] million in 1965-90. The majority of export taxes, which were an important feature of the tax system of Sudan were cancelled, together with royalties in November 1968, with the exception of those on gum and cotton in an attempt to encourage exports. This action has not proved effective and the revenue of the government from export taxes has been greatly reduced. The taxes were reintroduced in November 1969 but at lower rates.

The revenue from direct taxes was about 13 per cent of the total revenue of the central government in 1969-70, having been 2 7 per cent in 1963-64 The present direct taxes of Sudan (1969-yo) are income taxes, an emergency tax and a stamp duty The monetary earnings fringe benefits and interest a business profits tax, and a tax on income from rent (as laid down by the Income Tax Act, 1967) The top rate is 50 per cent, when total income reaches (S25 000 Dividends are not normally taxable in the Sudan, since companies pay a business profits tax, shareholders do not pay an income tax on their dividends Nevertheless a holding company which recerves dividends from its subsidiaries pays a business tax on aggregate profits after getting a tax credit for the tax paid by the subsidiary. An emergency tax was introduced in August 1969 to absorb part of the wage and salary increases given to employees in the public sector in 1968 by the previous government. The yield of the emergency tax is estimated to be £57 million in 1969-70 Stamp duty is considered as a direct tax in Sudan and its revenue is less than fS2 million

In addition to the revenue from taxation, fees, charges and profits from agricultural enterprises, the central government may borrow internally to meet current expenditure. Under the Bauk of Sudan Act 1959, amended in 1962, the government, its boards

and agencies, are permitted to borrow from the Central Bank up to 15 per cent of the ordinary revenue of the government, defined to include the central government, provincial and local government bodies, government boards, government banks and enterprises owned by the government or in which the government participates. For the fiscal year 1967-68 the maximum limit of such borrowing was fixed at S21.4 million, while the total advances from the Central Bank at the end of June 1968 amounted to £21.2 million. The revenue for the fiscal year 1968–69 for all the units in the public sector was estimated at £S171,878,116, and the maximum limit of borrowing by the government from the Central Bank was fixed at £S24.5 million, while the actual borrowing of the government during that fiscal year was £S24.3 million.

Furthermore, according to the Treasury Bill Act, 1966, the government may borrow by means of treasury bills, provided that the value of such bills outstanding at any time shall not exceed £55 million. The bulk of treasury bills have already been bought by the commercial banks. At the close of 1968 the value of commercial banks' holdings of treasury bills amounted to £54.85 million, and £5150,000 was held by other financial institutions in the private sector.

Since the mid-1960s the Sudan government has been finding it more and more difficult to make all its local cash payments, whether wages and salaries or payment to contractors, in time. This seems to be the result of two main factors: underestimation of expenditure and ineffective financial control of government accounts. This problem of the illiquidity of the public sector has forced the government to seek various ways to increase revenue and reduce expenditure, but it has not yet been solved.

The expenditure of the central government has been rising very fast since independence in 1956. In 1949 the total current expenditure of the central government was £S10 million; by 1969-70 it was £S142 million, an increase of more than fourteen times in a period of twenty years. Besides the rise in prices and the normal expansion in government services, increased expenditure on education, national defence and the rise in wages and salaries of the employees of the public sector have accentuated the rate of increase of the total current expenditure in recent years. The expenditure of the Ministry of Defence increased from £S14.1 million in 1965-66 to £S30 million in 1969-70, while the expenditure of the Ministry of Education increased from £S_{5.8} million in 1965-66 to £S9.8 million in 1969-70. This increase is a direct result of the continued crisis in the Middle East and a strong popular demand for more education. In 1968 the government raised the wages and salaries of its employees by 5-15 per cent and thus wages and salaries amounted to 41 per cent of the expenditure of the Central Government for 1968-69.

LABOUR AND WAGES

The number of persons five years of age and over reported in the 1955-56 census, as mainly engaged in economic activity, was 3,800,000 out of a population

of 10.2 million. In addition, it is estimated, on the basis of detailed tabulations of the census returns, that 1,116,000 persons, whose main activity was not economic, took part in subsidiary economic activity. So the total number engaged to any degree in economic activity is approximately 4,916,000 or 48 per cent of the population. Sudan's labour force is overwhelmingly male. Men make up 56 per cent of the total economically active population, women 24.7 per cent, boys 14.4 per cent and girls 4.9 per cent.

Of all the males and females in the labour force 86.7 per cent are primary producers, 3.3 per cent secondary producers and 10 per cent tertiary producers. All these percentages of sex and industrial distribution of the Sudan's labour force have not, it is thought, changed very much since 1955-56.

Beyond 1956 it is difficult to get any reasonably accurate data in order to assess the labour situation in Sudan. However, the number of wage-earners at present is estimated to be about one million—excluding agricultural workers. About half a million workers are engaged in the public sector and about the same number are employed by the private sector.

Until about 1965 one of the country's major problems was considered to be the shortage of skilled workers. There was heavy dependence on expatriates of Greek and Armenian descent, who filled a high proportion of skilled jobs and managerial and executive posts.

However, by 1965 the major development projects were finished. The most important factories in both private and public sectors, as well as Khashm el Girba and Roseires dams, were finished by that year. In the early 1960s institutes of technical education and training centres were established and by 1965 their graduates could meet the demand for skilled labour. The Khartoum Senior Trade School was opened in 1960 to teach electronics, commerce, electrical installation, machine shop, automobile and diesel mechanics, carpentry, cabinet making, brickwork and draughtsmanship. The Khartoum Technical Institute (Polytechnic) was opened in 1950, but the total enrolment was only 25 in 1950-51. At that time it taught only civil engineering. By 1960 the enrolment had risen to 569 and the institute syllabus included courses in civil engineering, mechanical and electrical engineering, surveying, secretarial work and commerce. An up-grading centre was established in Khartoum in 1960 by the Labour Department to improve the skills of workers already employed in both public and private sectors, and an apprenticeship centre was also established in Khartoum by the government, with German aid, in 1962. Another apprenticeship centre was established in Kosti in 1967.

In fact, after 1965, unemployment began to appear among skilled workers in the towns, and some economists and businessmen began to believe that the shortage of skilled workers was no longer a serious problem to the industrialization of Sudan. Sudan has already started to export skilled workers, clerical staff and teachers to the Arab countries.

The only available figures on unemployment come from the registrations at employment exchanges in major towns In 1967-68 31,919 were registered as unemployed However, it is obvious that this figure does not represent total open unemployment in Sudan Not all the workers register themselves when they are unemployed, particularly unskilled workers On the other hand, some workers may register more than once, while, when other workers find a job, neither they nor their employers report to the employment exchanges Therefore, the present figures of unemployment in Sudan should be viewed with great caution

There is no legal minimum wage in Sudan. However, in the public sector the minimum monthly wage paid for permanent employment is £Sr3 s, while it is about £Sc in the private sector. The daily minimum wage ranges between 25 and 50 pustres depending on the region and the season. During the cotton-picking season in the Gearra the daily minimum wage may use as high as 50 pastres per day. Wages and salaries are higher in the public sector than in the private sector, with the exception of modern and large firms in the private sector who only employ a very small percentage of the labour force engaged in the modern sector.

Although wages in the public sector are higher than wages in the private sector, they have declined in real terms over the last twenty years or so. At best, money wages increased by 40 per cent between 1931 and 1968 A wage increase was given in 1965 and 1968, but the cost of luring increased by at least 70 per cent between 1951 and 1968, and therefore real wages declined by about 30 per cent in that period. Most wages in the private sector have lagged behind wages in the public sector.

POWER AND TRANSPORT

The installed generating capacity of the Sadan in 1970 s 96 658 kW thermal and 29 220 kW hydro The total power generated in 1969 was 310 051,000 kWh The number of consumers is 65 259 residential and commercial, 558 agricultural and 844 industrial All the main towns of Sadan are supplied with electricity and some of the small towns which he near to the transmission lines, such as Kamlin, also enpoy this

facility Seventeen towns in Sudan are provided with electricity

The volume of electricity used by industry is 118,200,000 EVM, while the volume of electricity used by agriculture for pumps is 26,200,000 kWh The electricity consumption of industry does not include that of ginning factories, the large oil mills and Guneid and Khashm el Girba sugar factories All these generate their own electricity from by-products The grain silos at Gedaref and Port Sudau have their own generating sets

Sudan depends manily on railways for transport Steamers and motor transport play only a secondary role. All weather roads are very limited. The total length of sphalt main roads in Sudan is 208 miles, of which Khartoum Province has 178 miles. The length of cleared tracks covered with gravel is 3 210 miles. So the length of just cleared tracks is 7,810 miles and these make up the main network of roads in Sudan However, they are usually impassable immediately after the rains.

The rail transport facilities are still far from adequate In 1060-70 the railway network was 4.756 km In 1970 the average density of railways for the whole country is only 1 9 km per 1,000 sq km The river fleet comprises 386 low-speed old steamers of various types River transport is mainly used between Kosti and Jiha (1,435 km) and between Dongola and Kareima (187 km) However, river transport between Wadi Halfa and Shellal, which lies partly on Lake Nasser, is under development at present As far as sea transport is concerned, the government company, the Sudan Shipping Line, owns four dry cargo ships of 5 000 tons each At present, only 5 per cent of exports and imports are carried by domestic vessels Two additional dry cargo ships of 20 000 tons each, which are being built in Yugoslavia, will be delivered in 1971-72

The government-owned Sudan Airways, formed in 1947, operates internal and international services It connects Khartoum with twenty important Sudaness towns as well as with Rurope, the Middle East and Africa In 1968-69 it carried 122,574 passengers and 18 million tonkin

THE CONSTITUTION

In December 1955 a Transitional Constitution was adopted, under which the highest authority was vested in a Supreme Commission of five members, who were responsible for appointing the Prime Minister and his Cabinet from amongst the members of Parliament.

This Transitional Constitution was suspended following the military coup d'état of 1958, but the provisional

Government which took office after the overthrow of the military regime in October 1964, announced its intention of governing under the terms of the 1955 Constitution.

The Constituent Assembly, whose term had been extended in 1968, was abolished by the new regime in May 1969.

THE GOVERNMENT

NATIONAL REVOLUTIONARY COUNCIL

President: Maj.-Gen. JAAFAR AL NEMERY.

COUNCIL OF MINISTERS

(August 1971)

Prime Minister and Minister of Planning: Maj.-Gen. JAAFAR AL NEMERY.

CONSTITUENT ASSEMBLY

The Assembly was dissolved in May 1969

POLITICAL PARTIES

All political organizations were banned by the new government in June 1969.

Azania Liberation Front: Kampala, Uganda; Anyanya, the Front's military arm, provide the only rebel resistance in the southern Sudan since the Nile Provisional Government was dissolved in July 1970.

JUDICIAL SYSTEM

The administration of justice is the function of the Judiciary, as a separate and independent department of state. The general administrative supervision and control of the Judiciary is vested in the Chief Justice.

Civil Justice: is administered by the Courts constituted nnder the Civil Justice Ordinance, namely the High Court of Justice—consisting of the Court of Appeal and Judges of the High Court, sitting as Courts of original jurisdiction—and Provincial Courts—consisting of the Courts of Province and District Judges.

Criminal Justice: is administered by the Courts constituted under the Code of Criminal Procedure, namely Major Courts, Minor Courts and Magistrates' Courts. Serious crimes are tried by Major Courts which are composed of a President and two members and have power to pass the death sentence. Major Courts are as a rule presided over by a Judge of the High Court appointed to a Provincial Circuit, or a Province Judge. There is a right of appeal to the Chief Justice against any decision or order of a Major Court and all findings and sentences of a Major Court are subject to confirmation by him.

Lesser crimes are tried by Minor Courts consisting of three Magistrates and presided over by a Second Class Magistrate and by Magistrates' Courts consisting of a single Magistrate, or a bench of lay Magistrates.

Local Courts: try a substantial portion of the Criminal and Civil cases in the Sudan and work in parallel to some extent with the State Courts.

Chief Justice: UTHMAN As SAYID.

MUHAMMADAN LAW COURTS

Justice in personal matters for the Muslim population is administered by the Muhammadan Law Courts, which form the Sharia Division of the Judiciary. These Courts consist of the Court of Appeal, High Courts and Qadis' Courts, and President of the Sharia Division is the Grand Qadi. The religious Law of Islam is administered by these Courts in matters of inheritance, marriage, divorce, family relationships and charitable trusts.

Grand Qadi: Sheikh YAHYA ABDEL GASIM.

RELIGION

The majority of Sudanese are vigorous followers of Islam-it will be remembered that the Mahds of 1896 was s religious feader-but some communities in the south remain untouched by Islam and practise animism or fer tility worship The cultural contrast between the Muham madan north and centre and the non Muslim south with differences in race language religion and outlook gives rise to one principal political problem of the Sudan According to a 1955 survey the religious adherence of the population was as follows

| 6 474 453 |
|-----------|
| 2 428 703 |
| 162 745 |
| 94 981 |
| 12 525 |
| 380 |
| |

The population has since grown by some 50 per cent so these figures should probably be increased proportionately

MUSLIM COMMUNITY

(Mainly divided lato the following sects.) Oadria Heads of Important local sub-sections include

Sheikh Anwed et Gaalt Sheikh Innahim EL KABASHI YOUSIF EL SHEIER ONER EL OPEID KHALIFA BARAKAT EL SHEIKH Sheikh HAMAD EL NIL ABO EL BAGI Sheikh Ano EL BAGI EL MCKASHFI

INSURANCE COMPANIES

There are over forty foreign insurance companies operating in the Sudan.

TRADE AND INDUSTRY

Sudan Gezira Board: H.Q. Barakat; Sales Office, P.O.B. 884, Khartoum; Chair. and Man. Dir. Dr.-Kamal Agabawi; Deputy Gen. Man. Mahmoud Mohd. Ali; Financial Controller Abdalla Mam; Agricultural Man. Sayd. Abdalla Hashim; Sales Man. Sayd. Beshir Medani; Sec. El Tayib Ghalib.

The Sudan Gezira Board is responsible for Sudan's main cotton producing area. Starting in 1911 as a company enterprise, it was nationalized in 1950 and has since then been run by a Board of Directors, consisting of 8 to 11

members. In 1969 the Revolutionary Government formed a temporary Board of Directors consisting of six officials and a tenant farmers' representative pending an extensive reorganization of the Board.

The Gezira Scheme represents a partnership between the Government, the tenants and the Board. The Government, which provides the land and is responsible for irrigation, receives 36 per cent of the net proceeds; the tenants (who numbered over 86,000 in 1970 and who do the actual cultivation) receive 50 per cent. The Board receives 10 per

cent and the balance is shared between the Local Government Councils in the Scheme area and the Social Development Fund set up to provide social services for the inhabitants.

The total possible cultivable area of the Genra Scheme is over 5 milion acres and the total area under systematic imgation is now almost 2 milion acres in addition to cotton groundants, sorghum, wheat and millet are grown for the benefit of tenant farmers.

Publications Annual Report, Annual Statement of Accounts, El Gesira News Paper (weekly), Weekly Bulletin.

TRANSPORT AND TOURISM

TRANSPORT

RAILWAYS

Sudan Railways: Atbara; Gen. Man. ISMAIL HUSSEIN.

The total length of railway in operation is about 4,756 route-kilometres. The main line runs from Wadi Halfa, on the Egyptian border to El Obeid, via Khartoum. Lines from Atbara and Sennar connect with Port Sudan on the coast. Since independence two new lines have been built, one from Sennar to Roseires on the Blue Nile (225 km.), opened in 1954 and one from Aradeiba to Nyala, in the south-western province of Darfur (689 km.), opened in 1959. A railway branching from this line, at Babanousa, to Wau in Bahr el Ghazal province (445 km.), has now been completed.

The construction of the Egyptian High Dam has flooded the Wadi Halfa. The U.A.R. proposes to operate river services in the Wadi Halfa/Aswan reach by deep-draught vessels suitable to sail in the big lake so created.

ROADS

Ministry of Public Works: P.O. Box 300, Khartoum; Director of Works Ibrahim Mohd Ibrahim.

Roads in the Northern Sudan, other than town roads, are only cleared tracks and often impassable immediately after rain. Motor traffic on roads in the Upper Nile Province is limited to the drier months of January-May. There are several good gravelled roads in the Equatoria and Bahr-el-Ghazal Provinces which are passable all the year round, but in these districts some of the minor roads become impassable after rain.

The through route from Juba to Khartoum is open from mid-November to mid-April.

Over 30,000 miles of tracks are classed as "motorable", but only 208 miles are asphalt.

INLAND WATERWAYS

Ministry of Communications: Khartoum.

The total length of navigable waterways served by passenger and freight services is 4,068 km. From the Egyptian border to Wadi Halfa and Khartoum navigation is limited by cataracts to s ort stretches but the White Nile

from Khartoum to Juba is navigable at almost all seasons. The Blue Nile is not navigable.

The Sudan Railways operate 3,700 km. of steamer services on the navigable reaches of the Nile, touching Juba, Gambeila, Wau, Shellal (in Egyptian territory), and Dongola. These services connect with the Egyptian main railway services and the Nile river services of Kenya and Uganda.

SHIPPING

Sudan Railways: Atbara; responsible for operating Port Sudan.

Port Sudan, on the Red Sea, 490 miles from Khartoum, is the only scaport. There are eleven fully equipped berths, with a total length of 5,718 feet, and two secondary berths, There are also two berths with a total length of 1,200 feet.

River Navigation Corporation: Khartoum; f. 1970; jointly owned by the U.A.R. and Sudan governments; operates services between Aswan and Wadi Halfa.

Sudan Shipping Line: P.O.B. 426, Port Sudan; f. 1960; four vessels operating between the Red Sea, North Europe and the United Kingdom; Gen. Man. Yousif Bakheit Arabi.

CIVIL AVIATION

Sudan Airways: Gamaa Ave., P.O.B. 253, Khartoum; f. 1947; this airline is owned by the Sudan Government; regular services throughout the Sudan and external services to Aden, Chad, Ethiopia, U.A.R., Greece, Italy, Lebanon, Libya, Saudi Arabia, and the U.K.; Charter and Survey based at Khartoum; feet of 2 Comet 4C, 4 Fokker Friendship F-27A, 1 DC-3, and 3 Twin Otters; Gen. Man. M. E. ABDEL DAYEM.

The Sudan is also served by the following foreign airlines: Aeroflot, Alitalia, Balkan, B.O.A.C., Ethiopian AirLines, Interflug, Lufthansa, M.E.A., Saudi Arabian Airlines, Swissair and U.A.A.

TOURISM

Tourist and Hotels Department: Ministry of Communications and Tourism, P.O.B. 2424, Khartoum; f. 1959; Gen. Man. Ahmed Abu Bakr.

EDUCATION

Responsibility for education throughout the country is vested in a Minister of Education. His main offices are in Khartoum, from which education in the northero provinces is administered For administrative purposes, the Sudan is divided into nine provinces and each province has an education office with an inspectorate to look after the conduct of elementary and intermediate education Recause of their remoteness, the three southern provinces, Upper Nile. Bahr el Gharal and Equatoria have an Assistant Under-Secretary for Education with an office based in Juba Measures are now being taken to intergrate the southern Sudan system with that of the northero provinces. hy Arabicization and by unification of the syllabuses Arabic is now taught in all elementary, intermediate and secondary schools and the next step is to use Arabic as the medium of instruction Arabic is already being used in the majority of village schools. Northern syllabuses are being introduced wherever Arabic is used. A certain number of institutions are maintained by other ministries such as Health and Agriculture

Primary Education. Primary education is provided by Junior Elementary. Elementary and Intermediate schools In the northern province the Junior Elementary schools privade a 3-4 year contra (7-10 or 11 years) which follows the same corriculum as in the 4-year Elementary school convex, the difference burning in the standard of qualification of the teachers. In the southern provinces the Village Schools provide a a-year course (7-9 years), and the village Schools provide a a-year course (7-9 years), as we mashle to continue their studies beyond the elementary size may receive some educational guidance from boy' clabs (organized by primary school teachers in co-operation with local government bodies) or from therature issued for the purpose by the Publications Burean Admission to the Intermediate and Technical Intermediate schools is by competitive examination, and the schools give a 4-year The teaching of Arabice is an Important tiern at all read of education and is the principal language of instruction except in a very few schools.

A decision to abolish the Village School system has been promilgated as from the academic year 1967-1968, full Primary schools are to be established instead

A omber of noo Government schools, some of which are aided by Government grants, provide a valuable applement to Government grants provide a valuable supplement to Government grants and intermediate schools They include the Sudanese National schools, United Arab Republic schools, Christian Musician schools and others.

The number of junior elementary schools is decreasing thanks to the present educational policy to disperse with such type of school eventually. The number of elementary schools is steadyl increasing and the rate of expansion is expected to increase as more teachers become available in expected to increase as more teachers become available in the second service of the schools are the schools as the schools are been raised to the status of complete elementary schools (a-year course)

Girls' education is also beginning to make headway as parential opposition decreases. The system of education tas now been brought under the Provincial Education offices and the training of teachers and syllabuses are to be smifed with those of the boys. Previously girls started school at a later age than the boys and the supervision of the syllabuses was left to a special adviser. Seendary Education. Secondary education is provided by intermediate (lower secondary) and secondary schools Intermediate schools give a four year course (11-15 years) leading to the secondary schools by competitive examination. The term of secondary ducation lasts four years and brings the student to School Certificate standard Secondary courses are also provided by schools offering commercial subjects In 1956-65 there were 71-607 pupils in government secondary schools and 63,800 pupils in non-government secondary schools and 63,800 pupils in non-government secondary establishments

Religious Education, Religious Education comes under the Department of Religious Affairs which runs a number of schools designed to teach the Islamic culture. There are 54 government subsidy, and six secondary exhibits Government subsidy, and six secondary exhibits the Leading on to a further four-year secondary course. The Omdorman Religious School became an Islamie University in 1965.

Technical Education. In view of the Sudan's expanding indicativy and economic development, the Government realizes the vital need for skilled technical workers Great stress la ladio of the importance of manotaining the standards of technical concation and the students sit for internationally recognized examinations. There is at present a marked tendency towards the reform of technical education at all levels and a decision to dispesse with internacious deviations of the control of

Higher Education. University status was conferred on the University of earlier of the American in 1905. The University is not under the direct control of the Alumeter of Education, but it has it to was governing body consisting of ay members. However, it depends to a great extent on the Government However, it depends to a great extent on the Government of financial assistance and receives a rubatantial annual subaidy to supplement its own revenue from its special endowment fund. The Government also awards grants to many students who wish to pursue advanced courses in universities abroad English is the language of instruction except in the departments of Arabic and Shara Law In 1959-65 there were 3,242 students at the University.

In October 1955 the Khartoum hranch of the University of Cairu was set up, with three faculties of Arts, Law and Commerce The staff are all of U A R. nationality.

Teacher training is undertaken by the Institute of Education, which comprises two colleges at Bakh et Ruda for Intermediate and elementary teachers, the latter bas five branch colleges Bakh et Roda was founded in 1934, and it was given the responsibility of reforming beyretementary and intermediate education. The college has undertaken a great deal of work in the experimental preparation of syllabuses and of text-books, mainly Arabic, for use in schools. It also supervises the inspection of elementary and intermediate schools. The importance of this work has been enhanced by the decision to introduce northern syllabuses into the southern provinces Bakh et Rida is now also responsible for training and syllabus planning for guit education, except Home Economics.

Training for elementary teachers is given in three girls' teacher training colleges. Refresher courses are organized for established teachers, and from time to time special courses are held for headmasters and education officers.

Teacher Training Colleges are also being expanded. There are two Intermediate Training Colleges, one for men and the other for women, and nine colleges, six for men (elementary standard) and three for women. The first women teachers training college was opened by the government in 1921. The Elementary Training College has a two-year course after the intermediate, and intermediate colleges have two-year courses after the secondary.

The Islamic University of Omdurman has become a feature of higher education in the country since 1965. The incorporation of the old Islamic College of Omdurman into a University has now been confirmed by the promulgation of the Islamic University of Omdurman Act, 1968. In 1967 there were 429 students at the Islamic University.

Other Higher Institutes include the Higher Technical Institute at Khartoum, the High Trade School, the Higher Nursing College and School of Hygiene, run by the Ministry of Health, and the Shambat Agricultural Institute. A Higher Teachers' Training Institute was established in 1961 with UNESCO assistance. It provides a 4-year course for teachers.

Adult Education and Literacy Campaigns. The Institutes of Education carried out the first experiments in adult education in order to reduce mass illiteracy and to instruct mothers in the fundamental principles of child welfare. The initial attempts were so successful that an Adult Education Section was established in the Ministry of Education to deal specifically with the problem. This section is responsible for organising campaigns against illiteracy, creating boys' clubs and libraries, and providing better cultural opportunities for the people. In 1966-67 there were officers organizing 1,681 literacy classes. There were 32 boys' clubs in 1967-68. The officers also meet the people in order to discuss village projects such as the building of a school or establishing a co-operative society, providing facilities for sport and cultural activities and giving lessons on subjects including elementary civics and public health. Under the same scheme, women welfare workers visit homes and give instruction in child care and household management. This scheme has been so successful that a Centre for training village teachers as Community Development Workers, was set up in July 1960 at Shendi.

Scholarships. Realizing the importance of multi-lateral international co-operation, the Ministry of Education set up a Cultural Relations Section to supervise and organize all educational activities connected with other countries. The work of this office has greatly expanded since the Sudan receives many scholarships as well as offering them to newly-independent countries.

LEARNED SOCIETIES AND RESEARCH INSTITUTES

Agricultural Research Corporation, Ministry of Agriculture: P.O.B. 126, Wad Medani; f. 1919; 116 specialists; includes the following sections: Agronomy and Plant Physiology; Botany and Plant Pathology; Entomology (pest control, etc.); Cotton Breeding: Cereal Breeding; Soil Science; Horticultural Research; also directs four Regional Research Stations at Wad Medani (Gezira), Ed Damer (Hudeiba), Abu Naama (Kenana), and Yambio (Equatoria); and six sub-stations.

Syria

PHYSICAL AND SOCIAL GEOGRAPHY

Before 1918 the term Syria. Was rather loosely applied to the whole of the territory now forming the modern States of Syria the Lebanon, Israel, and Jordan To the Ottomans as to the Romans Syria stretched from the Emphrates to the Mediterranean and from the Smain to the hills of southern Turkey, with Palestine as a smaller province of this wider unit Though the present Syrian Arab Republic has a much more limited extension an eabo of the past remains to colour the political thinking of a few presentiday Syrians and from time to time there are references to a Greater Syria" as a desurable but possibly remote assuration

The frontiers of the present-day State are largely arthical, and refetce to a considerable extent the interests and prestage of outside Fowera—Britain, France, and the United States—as these exited in 1918–20. The northern frontier with Turkey is defined by a sincle-track railway her running along the southern edge of the foolthile-probably the only case of its kind in the world, whater constructions are supported by the configuration of the configuration of the foolthile-probably the only case of its kind in the world, whater construction of the configuration of the fooler of the configuration of the configuration of the configuration of the configuration of the configuration of the fooler of the fooler of the configuration of the co

PHYSICAL FEATURES

Geographically, Syria consists of two main sones as fairly autrow western part, made up of a complex of mon hair ranges and intervening valleys and a much larger eastern some that is essentially a broad and open platform dropping gently towards the east and crossed diagonally by the wide Eurbitates Valley.

The western zone, which contains over So per cent of the population of Syria, can be further subdivided as follows in the extreme west, fronting the Mediterranean Sea there hes an imposing ridge rising to 5 000 feet, and known as the Jebel Ansariyeb. Its western flank drops fairly gradually to the sea, giving a narrow coastal plain, but on the east it falls very sharply, almost as a wall to a flat bottomed valley occupied by the Orontes river, which meanders slaggishly over the flat floor, often flooding in winter, and leaving a malarial marsh in summer Farther east lie more bill ranges opening out like a fan from the south west, where the Anti Lebanon range with Mount Hermon (9 000 ft) is the highest in Syria Along the eastern flanks of the various ridges lie a number of shallow basias occu pied by small streams that eventually dry up or form closed salt lakes In one basin lies the city of Aleppo, once the second town of the Ottoman Empire, and still close to being the largest city of Syria In another is situated Damascus urigated from five streams, and famous for its clear fountains and gardens-now the capital of the country One remaining sub-region of western Syria is the Jebel Druse, which hes in the extreme south west, and consists of a vast out pouring of lava, in the form of sheets and cones Towards the west this region is fertile and produces good cereal crops, but eastwards the soil cover disappears leaving a barren countryside of twisted lava and caverns, for long the refuge of outlaws, bandits and minority groups Because of its difficulty and isolation the Jebel Druse has tended socially and politically to go its own way, remaining aloof from the rest of the country

The entire eastern some is mainly steppe or open desert, except close to the banks of the rivers Euphrates, Tigris, and their larger tributaries, where local irrigation projects have allowed a little cultivation. The triangularly shaped region between the Euphrates and Tigris rivers is spoken of as the Jeinreh (Arabie Jainta—saland), but it is in on way different from the remaining parts of the east

The presence of ranks of relatively high hills aligned parallel to the coast has important chimatic effects Tempering and humid effects from the Mediterranean are restricted to a narrow western belt and central and eastern Syria show marked continental tendencies that is, a very hot summer with temperatures often exceeding 100" or even 110° F., and a moderately cold winter, with frost on many mights. Very close to the Mediterranean, frost is unknown at any season, but on the bulls altitude greatly reduces the average temperature, so that snow may lie on the heights from late December to April, or even May Rainfall is fairly abundant on the west, where the height of the land tends to determine the amount received, but east of the Anti Lebanon mountains the amount decreases considerably, producing a steppe region that quickly passes into true desert. On the extreme east, as the Zagros ranges of Persia are approached, there is once again a slight in-crease, but most of Syria has an annual rainfall of under ten inches

ECONOMIC LIFE

There is a close relationship between climate and sconomigactivities In the West where up to 30 or even 40 inches of rainfall occur, settled farming is possible, and the main limitation is difficult terrain, but from the Orontes Valley eastwards natural rainfall is increasingly inadequate and irrigation becomes necessary. The narrow hand of territory where annual rainfall lies between 8 and 15 inches is some times spoken of as the 'Pertile Crescent', since it runs in an arc along the inner side of the hills from Jordan through western and northern Syria as far east as Iraq In its normal state a steppeland covered with seasonal grass, the Fertile Crescent can often be converted by irrigation and efficient organisation suto a rich and productive territory. Such at was in the golden days of the Arab Caliphate, now, after centuries of decline it is once again reviving Even within ten years a marked change can be observed and thanks to small-scale arrigation schemes and the installation of motor pumps to raise water from underground artesian sources large areas of the former steppe are produeing crops of cotton, cereals and fruit Syria has now a surplus of agricultural production, especially cereals, and this allows her to export to Jordan and the Lebanon, neither of which are self sufficient in foodstuffs Production will increase further if a scheme for a barrage on the muddle Emphrates east of Aleppo eventually comes to fruition This has been discussed for several years.

Because of its relative openness and accessibility and its geographical situation as a "wast" between the Mediterranean and the Persan Gulf, Syria has been a land of passage and for centures its role was that of an intermediary, both commercial and cultural between the Mediterranean world and the Far East From early times until the end of

the Middle Ages there was a flow of traffic east and west that raised a number of Syrian cities and ports to the rank of international markets. Within the last twenty or so years, following a long period of decline and eclipse resulting from the diversion of this trade to the sea, one can again note a revival due to the new elements of air transport and the construction of oil pipelines from Iraq.

RACE AND LANGUAGE

Racially, we can distinguish many elements in the Syrian people. The nomads of the interior deserts are unusually pure specimens of the Mediterranean type, iso-

lation having preserved them from intermixture. To the west and north there is a widely varying mosaic of other groups: Armenoids, such as the Kurds and Turkish-speaking communities of the north, and the Armenians themselves, who form communities in the cities; groups such as the Druses, who show some affinity to the tribes of the Persian Zagros, and many others.

As a result, there is a surprising variety of language and religion. Arabic is spoken over most of the country, but Kurdish is widely used along the northern frontier and Armenian in the cities. Aramaic, the language of Christ, survives in three villages.

HISTORY

ANCIENT HISTORY

From the earliest times, Syria has experienced successive waves of Semitic immigration—the Canaanites and Phoenicians in the third millennium B.C., the Hebrews and Aramaeans in the second, and, unceasingly, the nomad tribes infiltrating from the Arabian peninsula. This process has enabled Syria to assimilate or reject, without losing its essentially Semitic character, the alien invaders who, time and again, in the course of a long history, have established their domination over the land. Before Rome assumed control of Syria in the first century B.C., the Egyptians, the Assyrians and the Hittites, and, later, the Persians and the Macedonian Greeks had all left their mark in greater or lesser degree. Damascus is claimed to be the oldest capital city in the world, having been continuously inhabited since about 2000 B.C., and Aleppo may be even older. Under Roman rule the infiltration and settlement of nomad elements continued, almost unnoticed by historians, save when along the desert trade routes a Semitic vassal state attained a brief importance as, for example, the kingdom of Palmyra in the Syrian desert, which the Emperor Aurelian destroyed in A.D. 272 or, later still, when the Byzantines ruled in Syria, the Arab State of Ghassan, prominent throughout the sixth century A.D. as a bulwark of the Byzantine Empire against the desert tribes in the service of Sasanid Persia.

ARAB AND TURKISH RULE

When, after the death of the Prophet Muhammad in A.D. 632, the newly-created power of Islam began a career of conquest, the populations of Syria, Semitic in their language and culture and, as adherents of the Monophysite faith, ill-disposed towards the Greek-speaking Orthodox Byzantines, did little to oppose the Muslims, from whom they hoped to obtain a greater measure of freedom. The Muslims defeated the Byzantine forces at Ajnadain in July 634, seized Damascus in September 635, and, by their decisive victory on the River Yarmuk (August 636), virtually secured possession of all Syria. From 661-750 the Umayyad dynasty ruled in Syria, which, after the conquest, had been divided into four military districts or junds (Damascus, Homs, Urdun, i.e. Jordan, and Palestine). To these the Caliph Yazid I (680-83) added a fifth, Kinnasrin, for the defence of northern Syria, where in the late seventh century, the Mardaites, Christians from the Taurus, were making serious inroads under Byzantine leadership. Under Abd al-Malik (685-705) Arabic became the official language of the State, in whose administration, hitherto largely carried out by the old Byzantine bureaucracy, Syrians, Muslim as well as Christian, now had an increasing share. For Syria was now the heart of a great Empire, and the Arab Army of Syria, well trained in the

ceaseless frontier warfare with Byzantium, bore the main burden of imperial rule, taking a major part in the two great Arab assaults on Byzantium in 674-8 and in 717-18.

The new regime in Syria was pre-eminently military and fiscal in character, representing the domination of a military caste of Muslim Arab warriors, who governed on the basic assumption that a large subject population, non-Muslim and non-Arab in character, would continue indefinitely to pay tribute. But this assumption was falsified by the gradual spread of Islam, a process which meant the progressive diminution of the amount of tribute paid to the State, and the consequent undermining of the fiscal system as a whole In theory, conversion meant for the non-Arab convert (Mawla; in the plural, Mawali) full social and economic equality with the ruling caste, but in practice it was not enough to be a Muslim, one had to be an Arab as well. The discontent of the Mawali with their enforced inferiority expressed itself in an appeal to the universal character of Islam, an appeal which often took the form of religious heresies, and which, as it became more widespread, undermined the strength of the Arab régime.

To the ever present fiscal problems of the Arab State and the growing discontent of the *Mawali* was added a third and fatal weakness: the hostility between those Arab tribes which had arrived in Syria with or since the conquest, and those which had infiltrated there at an earlier date. The Umayyad house strove to maintain a neutral position over and above the tribal feuds; but from the moment when under the pressure of events, the Umayyads were compelled to side with one faction to oppose the other (battle of Marj Rahit 684), their position was irretrievably compromised.

When in A.D. 750 with the accession of the Abbasid dynasty the centre of the Empire was transferred to Iraq, Syria, jealously watched because of its association with the former ruling house, became a mere province, where in the course of the next hundred years, several abortive revolts, inspired in part by the traditional loyalty to the Umayyads, failed to shake off Abbasid control. During the ninth century Syria was the object of dispute between Egypt and Baghdad. In 878 Ahmad ibn Tulun, Governor of Egypt, occupied it and, subsequently, every independent ruler of Egypt sought to maintain a hold, partial or complete, over Syria. Local dynasties, however, achieved from time to time a transitory importance, as did the Hamdanids (a Bedouin family from Northern Iraq) who, under Saif ad-Daula, ruler of Aleppo from 946-967, attained a brief ascendancy, marked internally by financial and administrative ineptitude, and externally by military campaigns against the Byzantines which did much to provoke the great Byzantine reconquest of the late tenth century. By the treaty of 997, northern Syria became Byzantine, while

the rest of the country remained in the hands of the Fatimid dynasty which ruled in Expyt from 569. Fatimid conmid dynasty which ruled in Expyt from 569. Fatimid conmid from about 100 at 200.

But and a Aleppo—the Murdasids, who were soon to
disappear before the formidable power of the Selping Turks
The Selping, having conquered Fersas, rapidly neuran
Syria (Bamascus fell to them in 1073) but failed to estabbist there a mined State As a result of dynastic quarries,
the Selping domination disintegrated into a number of
smarter Selping princes ruled at Aleppo and Damascus, a
local dynasty held Tripoli and, in the south, Lgypt conrolled most of the hittoral

This political fragmentation greatly favoured the success of the First Crusade which, taking Antioch in 1093 and cess of the fust curvature which the care is a considered to be a considered to the the essential weakness of the crusading States began to appear Byzantium the Christian State of Lesser Armenia. and the Latin principalities in Syria never united in a successful resistance to the Muslim counter offensive which, instasted by the energetic Turkish general Zangs Atabeg of Mosul, developed rapidly in the third and fourth decades of the century Zangi, who seized Aleppo in 1128, and the Latin State of Edessa in 1144, was succeeded in 1146 by his able son Nur ad Din who hy his capture of Damascus in 1154 recreated in Syria a united Muslim Power On Nur ad Din a death in 1174 the Kurd Saladin, aiready master of Egypt, assumed control at Damascus and, in 1183 seized Aleppo His victory over the Crusaders at Hittin (July 1187) destroyed the kingdom of Jerusalem Only the partial success of the Third Crusade (1:89-92) and, sfter his death in 1193, the disintegration of Saladin's Empire into n number of separate principalities made it possible for the Crusaders to maintain an ever more pre-carious hold in the coastal areas of Syria. The emergence in Egypt of the powerful Mamink Sultanate (1250) meant that the end was near A series of military campaigns, led by the Sultan Baibars (1260-77) and his immediate anc-cessors brought about the fall of Antioch (1268) and Impoli (1289), and, with the fall of Acre in 1291, the disappearance of the crusading States in Syria

Before the last crusting States had been reduced, the Mandisk had to encounter a determined assault by the Morgols in the course of which Aleppo and Hama were sacked and Damascus besieged until in 1760 the Mongol army of imassion was crushed at the battle of Am Jalut, near Nazareth The Mongol II hans of Peris made further efforts to conquer Syrax in the late thirteenth century, negotating for this purpose with the Papary, the remaining crusture States and Lesser America in 1720 the week the Checked a Mongol sarmy at Homs but in 1720 when the Checked and Mongol sarmy at Homs but in 1720 when the Checked and Mongol sor my are northern Syria and to take Damascus in 1500 Only in 1501, at the battle of Mary as-Suffar, south in Damascus was this last Mongol offensive finally receiled

The period of Mamila rule in Syras, which endared until 1517, was on the whole one if alow decline Warfare, periodical famine, and not least, the plague (there were four great outbreaks in the fourteenth century, and in the six-cut century fourteen more recorded attacks of some rest of the six of

The ill-defined protectorate which the Mamiuks asserted over Clicia and considerable areas of southern Anatolia occasioned in the late fifteenth century, a growing tension with the power of the Ottoman Turks which broke out into

inconclusive warfare in the years 1485-91 When to this tension was added the possibility of an alliance between the Mamiuks and the rising power of the Satavids in Persia, the Ottuman Sultan Selim I (1512-20) was compelled to seek a decisive solution to the problem. In August 1516 the battle of Mary Dabik, north of Aleppo, gave Syria to thn Ottumans, who proceeded to ensure their continued hold on the land by conquering Egypt (1517) Turkish rule, during the next three centuries, although unjustly accused of complete responsibility for a decay and stagnation which appear to have been well advanced before 1317, brought only a temporary improvement in the unhappy condition of Syria, now divided into the three provinces of Damascus, Tripoli, and Aleppo In parts of Syria the Turkish pashas in reality administered directly only the important towns and their smmediate neighbourhood elsewhere, the older efements-Bedouin emirs Turcoman chiefs etc-were left to act much as they pleased provided the due tribute was paid The pashas normally bought their appointment to high office and sought in their brief tenure of power to recover the money and bribes they had expended in securtog it. knowing that they might, at any moment, be replaced by someone whn could pay more for the post Damascus alone had 133 pashas in 180 years. As the control of the Sultan at Constantinople became weaker, the pashas nbtained greater freedom of action, until Ahmed Jazzar, Pasha of Acre, virtually roled Syria as an independent prince (1785-1804)

The nuncteenth century saw important changes The Ottoman Sultan Mahmmd II (368-36) had promised Syria to the Pasha of Egypt, Sluhammdd All, in return for Pasha of Egypt, Sluhammdd All, in return for the Pasha of Egypt and the Pasha of Egypt and the Pasha of Egypt and the Pasha of Egypt and the Pasha of Egypt and Pasha of Egypt and Pasha of Egypt and Pasha of Egypt and Pasha of Egypt and Pasha of Egypt and Pasha of Egypt and Pasha of Egypt and

Western influence, working through trade through the protection of religious minorities, and through the cultural and educational efforts of missions and achools, had received encouragement from Ibrahim Pasha The French Jesuits returning to Syria in 1831, opened schools, and in 1875 founded their University at Beirut The American Presbyterian Mission (established at Beirut in 1820) introduced a printing press in 1834 and in 1866 founded the Syrian I'rotestant College, later renamed the American University of Beirut Syria also received some benefit from the reform movement within the Ottoman Empire, which, begun by Mahmud II, and continued under his successors. took the form of a determined attempt to modernise the structure of the Empire The semi fodependent pashas of old disappeared, the administration being now entrusted to salaried officials of the central government some effort was made to create schools and colleges on Western lines, and much was done to deprive the landowning classer of their feudal privileges although their social and economic predominance was left unchallenged As a result of these improvements there was, in the late nuncteenth century, a revival of Arabic literature which did much to prepare the way for the growth of Arab nationalism in the twentleth century.

MODERN HISTORY

By 1914 Arab nationalist sentiment had made some headway among the educated and professional classes, and especially among army officers. Nationalist societies like Al-Fatat soon made contact with Arab nationalists outside Syria—with the army officers of Iraq, with influential Syrian colonies in Egypt and America, and with the Sharif Husein of Mecca. The Husein-McMahon Correspondence (July 1915-January 1916) encouraged the Arab nationalists to hope that the end of the Great War would mean the creation of a greater Arab kingdom. This expectation was disappointed, for as a result of the Sykes-Picot Agreement, negotiated in secret between England, France, and Russia in 1916, Syria was to become a French sphere of influence. At the end of the war, and in accordance with this agreement, a provisional French administration was established in the coastal districts of Syria, while in the interior an Arab government came into being under Amir Faisal, son of the Sharif Husein of Mecca. In March 1920 the Syrian nationalists proclaimed an independent kingdom of Greater Syria (including the Lebanon and Palestine); but in April of the same year the San Remo Conference gave France a mandate for the whole of Syria, and in July, French troops occupied Damascus.

By 1925 the French, aware that the majority of the Muslim population resented their rule, and that only amongst the Christian Maronites of the Lebanon could they hope to find support, had carried into effect a policy based upon the religious divisions so strong in Syria. The area under mandate had been divided into four distinct units; a much enlarged Lebanon (including Beirut and Tripoli), a Syrian Republic, and the two districts of Latakia and Jebel Druse. Despite the fact that the French rule gave Syria a degree of law and order which might render possible the transition from a medieval to a more modern form of society, nationalist sentiment opposed the mandate on principle, and deplored the failure to introduce full representative institutions and the tendency to encourage separatism amongst the religious minorities. This discontent, especially strong in the Syrian Republic, became open revolt in 1925-26, during the course of which the French twice bombarded Damascus (October 1925 and May 1926).

The next ten years were marked by a hesitant and often interrupted progress towards self-government in Syria, and by French efforts to conclude a Franco-Syrian treaty. In April 1928 elections were held for a Constituent Assembly, and in August a draft Constitution was completed; but the French High Commissioner refused to accept certain articles, especially Article 2, which, declaring the Syrian territories detached from the old Ottoman Empire to be an indivisible unity, constituted a denial of the separate existence of the Jebel Druse, Latakia, and the Lebanese Republic. After repeated attempts to reach a compromise, the High Commissioner dissolved the Assembly in May 1930 and, on his own authority, issued a new Constitution for the State of Syria, much the same as that formerly proposed by the Assembly, but with those modifications which were considered indispensable to the maintenance of French control. After new elections (January 1932) negotiations were begun for a Franco-Syrian treaty, to be modelled on that concluded between England and Iraq in 1930, but no compromise could be found between the French demands and those of the nationalists who, although in a minority, wielded a dominant influence in the Chamber and whose aim was to limit both in time and in place the French military occupation, and to include in Syria the separate areas of Jebel Druse and Latakia. In 1934 the High Commissioner suspended the Chamber indefinitely. Disorders occurred early in 1936 which induced the French to send a Syrian delegation to Paris, where the new Popular Front Government showed

itself more sympathetic towards Syrian aspirations than former French governments had been. In September 1936 a Franco-Syrian treaty was signed which recognised the principle of Syrian independence and stipulated that, after ratification, there should be a period of three years during which the apparatus of a fully independent State should be created. The districts of Jebel Druse and Latakia would be annexed to Syria, but would retain special administrations. Other subsidiary agreements reserved to France important military and economic rights in Syria. It seemed that Syria might now enter a period of rapid political development; but the unrest caused by the situation in Palestine, the crisis with Turkey, and the failure of France to ratify the 1936 treaty were responsible, within two years, for the breakdown of these hopes.

In 1921 Turkey had consented to the inclusion of the Sanjak of Alexandretta in the French mandated territories, on condition that it should be governed under a special regime. The Turks, alarmed by the treaty of 1936, which envisaged the emergence of a unitary Syrian State including, to all appearance, Alexandretta, now pressed for a separate agreement concerning the status of the Sanjak. After long discussion the League of Nations decided in 1937 that the Sanjak should be fully autonomous, save for its foreign and financial policies which were to be under the control of the Syrian Government. A treaty between France and Turkey guaranteed the integrity of the Sanjak. and also the Turco-Syrian frontier. Throughout 1937 there were conflicts between Turks and Arabs in the Sanjak, and in Syria a widespread and growing resentment, for it was clear that sooner or later Turkey would ask for the cession of Alexandretta. The problem came to be regarded in Syria as a test of Franco-Syrian co-operation, and when in June 1939, under the pressure of international tension, Alexandretta was finally ceded to Turkey the cession assumed in the eyes of Syrian nationalists the character of a betrayal by France. Meanwhile, in France itself, opposition to the treaty of 1936 had grown steadily; and in December 1938 the French Government, anxious not to weaken its military position in the Near East, declared that no ratification of the treaty was to be expected.

Unrest in Syria led to open riots in 1941, as a result of which the Vichy High Commissioner, General Dentz, promised the restoration of partial self-government; while in June of the same year, when in order to combat Axis intrigues the Allies invaded Syria, General Catroux, on behalf of the Free French Government, promised independence for Syria and the end of mandatory rule. Syrian independence was formally recognized in September 1941, but the reality of power was still withheld, with the effect that nationalist agitation, inflamed by French reluctance to restore constitutional rule, and by economic difficulties due to the war, became even more pronounced. When at last elections were held once more, a nationalist government was formed, with Shukri Kuwatly as President of the Syrian Republic (August 1943).

Gradually all important powers and public services were transferred from French to Syrian hands; but conflict again developed over the Troupes Spéciales, the local Syrian and Lebanese levies which had existed throughout the mandatory period as an integral part of the French military forces in the Levant, and which, transferred to the Syrian and Lebanese Governments. would enable them to form their own armies. Other points of dispute were the so-called "Common Interests" (i.e. departments dealing with matters of concern to both Syria and the Lebanon), and the control of internal security, hitherto in French hands. Strongly supported by the newly-created Arab League, Syria refused the French demand for a Franco-Syrian Treaty as the condition for the final transfer of these administrative and military services which had always been

the main instruments of French policy. In May 1935 disturbances broke out which ended only with British armed intervention and the evacuation of French troops and administrative personnel. The Troupes Spletalers were now handed over to the Syran Government, and with the departure of British forces in April 1946 the full independ ence of Syran was at last achieved.

UNSTABLE INDEPENDENCE

Since the attainment of independence Syria has passed through a long period of instability. She was involved in a complicated economic and financial dispute with the Lebanon (1948-50) and also in various schemes for union with Iraq—schemes which teoded to divide political opinion inside Syria itself and, in addition, to disrupt the unity of the Arab League Syria, in fact, found herself aligned at this time with Egypt and Saudi Arabia against the ambitions of the Hashemite rulers of Iraq and Jordan These rivalries together with the profound disappointment felt at Damascus over the Arab failures in the war of 1948-49 against Israel, were the prelude to a series of courts d ciat in Syria in March 1949, under Colonel Hisni Zaim, in August of the same year under Colonel Sami Hinnawi, and in December 1949 under Lieut-Colonel Shishakli Dishke of continued financial dependence on France, aspirations towards a greater Syria, the resentments arising out of the unsuccessful war against the Israelis-all help to explain the unrest inside Syria,

The intervention of the army in politics was itself a case of further tension. Opposition to the dominance of the army grew in the Syrian Chamber of Deputies to such an extent that yet another coup d'état was carried out in December 1951. Syria now came noder the cootrol of a military antocracy with Colonel Shishakli as head of the state The Chamber of Deputies was dissolved in December 1951, a decree of April 1952 abolished all political parties in Syria. After the approval of a new constitution in July 1953 General Shishakii became President of Syria in Angust of that year. The formation of political parties was now allowed once more Elembers of the parties dissolved under the decree of April 1952 proceeded, however, to beyout the elections held in October 1933, at which Prendent Shahakhi & Movement of Arab Liberation obtained a large majority in the Chamber of Deputies Politicians hostile to the regime of President Shishakli established in November 1953 a Front of National Opposition, refusing to accept as legal the results of the October elections and declaring as their avowed aim the end of military autocracy and the restoration of democratic rule Demonstratuous at Damascus and Aleppo in December 1953 led soon to the flight of Shishakii to France The collapse of his regime early in 1954 meant for Syria a return to the Constitution of 1950 New elections held in September 1954 brought into being a Chamber of Deputies notable for the large number of its members (81 out of 142) who might be regarded as independents grouped around leading political figures

INFLUENCE FROM ABROAD

There was still however, much friction in Syria between those who favoured union or at least close cooperation with Iraq and those inclined towards an effective entering with Egypt. In August 1955, Subrir al Kuwati became with Egypt in August 1955, Subrir al Kuwati became preted as of the Republic His appointment was interpreted as a distribution of the Company of the August 1957, Syria made with Egypt an agreement for the creation of a joint multary command with the Bengharters at Damascus

The USSR., meanwhile, in answer to the developments in the Middle East associated with the Baghdad Pact, had begun an intensive diplomatic, propaganda and economic

campaign of penetration into the Arab lands. In the years 1954—50 Syn the only Arab state where the Communst Party was legal, made a number of barter agreements with the Soviet Umon and its associates in eastern Europe A report from Cario mitmated, in February 1936, that Syria had joined Egypt in accepting arms from U S S R

At the end of October 1956 there occurred the Israela campaign in the Sinai peninsula, an event followed, in the first days of November, by the armed intervention of Great Britain and France in the Suez Canal region On October 30th the President of the Syrian Republic left Damascus on a visit to the Soviet Union A state of emergency was declared in Syria Reports from Beirut revealed on November 3rd that Syrian forces had put out of action the pipelines which carried Iraqi oil to the Mediterranean. The damage that Syrian elements had done to the pipelines earned the sharp disapproval of such Arab states as Iraq and Sandi Arabia, both of whom were now faced with a severe loss of on revenues The Syrian Government declared that it would not allow the repair of the pipelines until Israel had withdrawn her troops from Gaza and the Galf of Aqaba, Not until March 1957 was it possible to restore the pipelines, Israel having in the meantime agreed to evacuate her forces from the areas in dispute

In April 1957 a crisis took place in Jordan where the Palestinian elements in political circles with some support from the army, sought to draw Jordan into alignment with Egypt and Syria. At the time of the Sinai Suez crisis in November 1956 contingents of Syrian troops had been stationed in Jordan These troops were still on Jordanian soil There were also reports that reinforcements might be sent to the Syrian forces in Jordan It seemed that a major intervention in the affairs of Jordan was imminent On April 24th the USA, announced that it regarded the undependence and integrity of Jordan as a matter of vital concern The United States Sixth Fleet was now ordered to the eastern Mediterranean with instruction to assist Jordan, if aid were requested At the same time the US Government deplored the flow of Soviet arms and equipment to Egypt and Syria. In May 1957 Syria stated that in compliance with a request from Amman, she would withdraw her forces from Jordan

UNION WITH EGYPT

The Syrian National Assembly, in November 1957, passed e resolution in favour of union with Egypt. Earlier in the year there had been discussions concerning proposals for a customs union between the two countries and for the co-ordination of their currencies and of their economic policies. The formal union of Egypt and Syria to constitute one state under the title of the United Arab Republic received the final approval of the Syrian National Assembly on February 5th, 1958 President Nasser of Egypt, on February 21st, became the first head of the combined state A tentral cabinet for the UAR was established in October 1958, also two regional executive couocils, one for Syria and one for Egypt. A further move towards integration came in March 1960, when President Nasser announced the formation of a single National Assembly for the whole of the UAR The Assembly, consisting of 400 deputies from Egypt and 200 from Syria, held Its first meeting at Cauro on July 21st, 1960

The more extreme elements of the right and of the lefteg the conservative class of Indoovener and also the Communit following in Syria—had viewed with distrust the union of Syria and Egypt Amongs the Baath Seculists who had played an important role in bringing as a result of the small progress in 1956, dissistantion gree so a a result of the small progress of the state of the socialisation of the Syrian economy. There was disillusionment, too, in the Syrian armed forces over the more and more frequent transfer of Syrian officers to Egypt and of Egyptian officers to Syria. Administrators and officials of Egyptian origin had come, moreover, to hold a large number of the most influential positions in the Syrian Region of the U.A.R. Syria still retained, however, at the end of 1960 and in the first months of 1961, a considerable measure of autonomy in most economic matters.

August 1961 saw the abolition of the regional executive councils for Syria and Egypt created in 1958. This attempt to hasten the integration of the two countries was the prelude to a new crisis at Damascus. On September 28th, 1961, there occurred in Syria a military coup d'état which aimed—successfully—at the separation of Syria from Egypt and at the dissolution of the United Arab Republic. Political figures representing most of the parties which existed in Syria before the establishment of the U.A.R. in 1958 met at Damascus and Aleppo on October 3rd, 1961, issuing a declaration of support for the new regime and calling for free elections to a new legislature. Syrian members of the National Assembly of the U.A.R. gathered at Damascus on October 4th to denounce the arbitrary and dictorial character of the control previously exercised from Cairo over Syrian affairs. President Nasser now, on October 5th, recognized the fait accompli. Most foreign states made haste to grant formal recognition to the government at Damascus. On October 13th, 1961, Syria became once more a member of the United Nations. A provisional constitution was promulgated in November and elections for a Constituent Assembly took place on December 1st, 1961.

The regime thus established in Syria rested on no sure foundation. At the end of March 1962 the Syrian Army intervened once more, bringing about the resignation of Dr. Nazim Kudsi, the President of the Republic, and also of the ministers who had taken office in December 1961. After demonstrations at Aleppo, Homs and Hama in April 1962, Dr. Kudsi was reinstated as President, but further ministerial resignations in May of that year pointed to the existence of continuing tensions within the government.

THE REVOLUTION OF 1963

A military junta, styled the National Council of the Revolutionary Command, seized control in Damascus on March 8th, 1963. During March and April 1963 tension was visible between those elements which advocated a close association with Egypt and those Baathist circles which tended to oppose such a programme. In May 1963 the Baathist took measures to purge the armed forces and the administration of personnel known to favour a close alignment with Egypt. A new government, formed on May 13th and strongly Baathist in character, carried out a further purge in June and at the same time created a National Guard recruited from members of the Baath movement. These measures led the pro-Egyptian elements to attempt a coup d'état at Damascus on July 18th, 1963. The attempt failed, however, with a considerable loss of life.

There were, in the second half of 1963, a number of moves designed to bring about some form of union between Syria and Iraq. In August it was announced that the two countries would establish committees empowered to promote effective co-operation in matters of defence; in September proposals for a federation of Syria and Iraq came under discussion; in October a Supreme Defence Council was established under General Ammash, the Defence Minister of Iraq; and, also in October, at an international conference of al-Baath held in Damascus, a resolution was adopted calling for the union of Syria and Iraq. The aspirations embodied in this resolution were

doomed, however, to disappointment; a coup d'état at Baghdad in November 1963 swept aside the Baath regime in Iraq.

BAATH SOCIALISM

The Syrian Government, in May 1963, had nationalized all Arab-owned banks in Syria and in August of that year proceeded to order their reduction into fewer but larger units with new boards set in charge of them. Government decrees issued in April 1964 nationalized a number of textile factories at Aleppo. The factories would henceforward be under the control of elected representatives of the employees, together with representatives of the Government, of al-Baath and of the trade unions. The principle of "self-management" in industrial concerns, and also in agriculture, had received approval at the international Baath conference of October 1963.

The nationalization of the banks and of various industrial enterprises, also the transfer of land to the peasants-all had contributed to bring about much dissatisfaction in the business world and amongst the influential landed elements. The Baath regime depended for its main support on the armed forces (purged of the personnel opposed to the policies of the government). These forces, however, had been recruited in no small degree from the religious minorities in Syria, including adherents of the Shi'i (Alawi) faith—most Syrians being, in fact, of Sunni or orthodox Muslim allegiance. In general, conservative Muslims tended to oppose the Baath government under guidance of the 'ulama and of the Muslim Brotherhood. The mass of the peasant population was thought to have some pro-Nasser sympathies; the working class (small in number) was divided between pro-Nasser and Baathist adherents; the middle and upper classes opposed the domination of al-Baath.

The unease arising out of these frictions and antipathies took the form of disturbances at Banias and Homs (February 1964), at Aleppo (March 1964) and finally of open revolt—soon suppressed—at Hama (April 1964). After the Hama rising came a wave of anti-government demonstrations and a strike of shopkeepers in all the main towns—e.g. Damascus, Hama, Homs, Aleppo—of central and northern Syria, except Latakia (an Alawi centre). The government now used pressure to bring about a resumption of normal business activities—pressure which threatened confiscation and trial for sabotage as the penalties for resistance.

Meanwhile, on April 25th, 1964, a provisional constitution had been promulgated, describing Syria as a democratic socialist republic forming an integral part of the Arab nation. A Presidential Council was established on May 14th, 1964, with General Hafiz as head of the state.

A government decree of December 23rd, 1964, nationalized the as yet undeveloped petroleum and other mineral resources of Syria. Early in January 1965 the Syrian Government placed under national control, wholly or in part, industrial concerns connected with cement, dyes, textiles, sugar, canning, food production, chemicals and soap. On January 7th, 1965, a special military court was created with sweeping powers to deal with all offences, of word or deed, against the nationalization decrees and the socialist revolution. These new measures evoked once more a series of demonstrations and a strike of shopkeepers in Damascus (January 24th, 1965). Further government decrees now confiscated the goods and properties of merchants held to be responsible for the disorders. General Hafiz denounced the 'ulama and the Muslim Brotherhood as being involved in the demonstrations. On February 19th, 1965, further decrees nationalized about forty pharmaceutical importing establishments at Damascus and Alsppo together with a number of other trading companen. The official importing and Exporting Organization was now alone able to import basic commodities such as tea timed meals fish rubber iron tumber textules tractors, cars drugs fertilizers sait tobacco and paper. Reports current and the ordered the nationalization of more oil companies estimated to control between them some two-throat of the total fuel consumption in Syria

The aniumn of 1965 saw a number of important changes unde Syna. A National Council almost one hundred strong was established in Angast with the task of preparing a new constitution which would be submitted to a pubble referendum Meeting for the first time on September ist 1965 it created a Preadency Council of five members which was to exercise the powers of a head of state

RADICAL REACTION

The tensors hutherto visible in al Baath were however still active. Two groups stood ranged one against the other—on the one hand the older more experienced politicians in al Baath fess inclined than in former years to must on the amentanced pursons of the main Baathest hand the extreme felt wing elements doctrinates on there string the proper representation of the string of the string of the proper string of the string of the string string and the string of the string the string of the string of the string of the string the string of the string of the string of the string of the string of the string of the string of the string of the string of the string string of the string of

The tensions thus engendered found expression in a new sept d that on February 231 1966 A multary justa representing the extreme radical elements in all Buath setted power in Diamascus and placed noder arrest a number of personalities long identified with all Buath said bolonging to the international lieadership controlling the organization throughout the Arah world—amongst them the charman of the recently established Freedeney Council and Mr. Salah all Din Buar the Prime Munister of the displaced administration

The new Prime Minister of Syria Dr. Zeayen visited the Soriet Union in April 1966. Rissias then granted Syria a loan of about £50 million for the construction of a great dam about a fine long on the River Emphrates at the state of the stat

Reports current in July 1966 indicated that the govern ment at Damascus had arrested a number of poblicians amongst them personalities associated with the former National and Peoples Parties On September 6th the Syrian Government amonaced that it had discovered and the second of the second of the personalities charged with involvement in the coup of data of February 1966 Of the personalities charged with involvement in the conspuracy the most prominent were Mr Michel Aflag the founder of all Bands Mr Salah all Discover of the personalities charged with involvement in the conspuracy the most prominent were Mr Michel Aflag the founder of all Bands Mr Salah all Discover in the conspuracy that the conspuracy were minister and Dr Minni all Barzas and the Conspuracy were ministry elements supporting General Hafe the head of the preceding regime

A delegation led by Dr Ynsul Zeayen the Prime Minister of Syria visited Cauro on November 1st 1966 On November 4th the United Arah Republic and Syria entered into a defence agreement for military co-ordination between the two countries. The agreement stypilated that aggression against either state would be considered as an assault on the other to be repelled by the armed forces of the U A R, and of Syria acting together. A defence council and a joint military command were to be established under the terms of the agreement

ARAB-ISRAELI WAR

The Inction ever present along the frontier between Syria and Israel had faired out from time to time during recent years into violent conflict—eg in March 1962 (Lake Therasi) August 1963 (Haleh) November 1964 (Dani) Angust 1963 (Khirbet north of Lake Tiberias) and July 1966 (again in the region of Lake Tiberias) and July 1966 (again in the region of Lake Tiberia) and July 1966 (again in the region of Lake Tiberia) and July 1966 (again in the region of Lake Tiberia) and Law 1964 (Lake Tiberia) and Law 1964 (Lake Tiberia) and Law 1964 (Lake Tiberia) and a sasume more serious proportions. Israel in October 1966 complained to the Sennity Council of the United Nations about guerilla activities from Syria across the frontier into Israel, territory There was renewed violence near Lake Tiberias in January 1967 U Thain in this same month urged Syria and Israel to act with restraint and auggested that a special meeting be arranged of the Syrian Israel in used armittice commission—which had not been conversed unce 1959—began in new discussions on January 25th 1969 Wild institution made no significant progress and came to an end on February 17th 1965 There was a more senous outbrak of violence during April 1967 tanks mortars cannon and art force annis from Syria and Larael being involved in fighting south-east of Lake Tiberias

Dump the period following the war. Syma opposed all attempts to reach a compromise solution and in effect beyouted the Arab animate conference held at Khartoum in August 1967. In September the Bansh party of Syma rejected all idea of a compromise with Israel expressed its full support for the Yemen Republic and for the Arab nationalists in South Arabia and celled on the Arab nationalists in general to maintain a diplomatic economic and cultivaril beyout of the United States the United Kingdom and the German Federal Republic.

In the same month israels elements began to settle in some of the lands taken from the Arab states in the course of the war particularly in Banasa on the Syrnan plateau At the same time a number of amall incidents occurred along the frontier between Israel and the adjacent Arab states apparently the work of abotinge organizations trained and supported by Syria On 4th November there was a between Israel in force and Syrian troops who considered the Course of th

June 1967)
A British resolution urging the withdrawal of the Israel a from the lands occupied by them during the June war and the ending of the beligherency which the Arab governments had up till them maintained against Israel was adopted by the UN Security Council in November 1967 However

the resolution was immediately rejected by Syria, which alone maintained its commitment to a re-unified Palestine.

STRUGGLE FOR POWER 1968-71

The ruling Baath Party has for some years been divided into two main factions. Until October 1968 the dominant faction had been the "progressive" group led by Dr. Atassi and Dr. Makhous, the Premier and Foreign Minister respectively. This group was distinguished by its doctrinaire and Marxist-orientated public pronouncements (not always put into effect despite its control of the government) and by the strong support it received from the U.S.S.R. It held that the ereation of a strong one-party state and economy along neo-Marxist lines was of paramount importance, overriding even the need for a militant stand towards Israel and for Arab unity.

By October 1968 the government felt particularly insecure, partly owing to a feud with the new Baath regime in Iraq, and at the end of the month a new eabinet was formed including several members of the opposing "nationalist" faction. This group took less interest in dieological questions and favoured a pragmatic attitude to the economy, improved relations with Syria's Arab neighbours and full participation in the campaign against Israel, including support for the fedayeen movement. Its leader was General Hafez Assad, who assumed the allimportant Ministry of Defence. His critical attitude to the powerful Soviet influence on the government, seen by some 'nationalists" as tantamount to colonialism in restricting Syria's freedom of action, led to a prolonged struggle with the "progressive" leadership. Cabinet reshuffles took place in March and again in May, but both Dr. Atassi and General Assad retained their positions. During the spring of 1969 a number of Communists were arrested or sent into exile, and the leader of the Syrian Communist Party (still technically an illegal organization) flew to Moscow.

General Assad attempted to take over the government in February 1969 but was forestalled by Soviet threats that if he did so all military supplies (including spares), economic and technical aid, and trade agreements would end. This would have brought about a major disruption in the national economy and the armed forces, and the "nationalists" were obliged to yield. In May General Mustafa Tlas, the Army Chief of Staff and General Assad's right-hand man, led a military delegation to Peking to buy arms. Some Chinese weapons were reported to be delivered in July. The incident indicated a new independence of Moscow. Some observers also saw this independence in the creation of a joint military command with Iraq (with whom relations improved during the spring) and Jordan. Relations with the Lebanon worsened, owing to Syria's support of the Lebanese fedayeen movement, which has many Syrian members. In the 1968-70 period this appeared to direct much of its activity towards bringing down the precarious Lebanese Government, presumably in the hope that a more militantly anti-Israel ministry would take power. Syria did, however, grant diplomatic recognition to the German Democratic Republic (East Germany) in June, and refused to resume diplomatic relations with Britain and the U.S.A. In May it was announced that a general election would be held in September, the first for seven years, but in August the elections were postponed indefinitely.

During the year 1969-70 there was some revival of activity on the front with Israel. Several air battles took place, and there was an extensive surface conflict involving tanks in June 1970; as usual, both sides elaimed sweeping victories. Syria consistently supported the guerrilla forces in their struggle with the Jordan government, although guerrillas on Syrian territory seem to be allowed little freedom to manoeuvre.

In the spring of 1970 the Syrian section of the Tapline pipeline was put out of action, apparently by an accident Syria refused to allow repairs, claiming that these operations would be dangerous as the section affected lies near Israeli-occupied territory. Since the pipeline and the crude oil it transports are American owned, the refusal was eommonly seen as an attempt to put pressure on the United States and its Middle East policy. There was no official American reaction, but Saudi Arabia, as the oil producer affected and in any ease at the opposite extreme to Syria in ideology, responded by threatening to abandon the use of Tapline altogether. This would have lost Syria (and the Lebanon and Jordan) considerable sums in transit dues. King Faisal also threatened to cease paying subventions to Egypt and Jordan, in the hope that these countries would then put pressure on Damascus to allow repairs. In January Syria allowed repairs to the pipeline to be started, after increased transit fees had apparently been conceded by Tapline.

In November 1970, following a reported coup attempt backed by Iraq in August, the struggle between the two factions of the Baath Party eame to a head when General Assad seized power. Dr. Atassi, who was in hospital at the time, was placed under guard and retired General Salah Jadid, Assistant Secretary-General of the Baath Party and leader of the civilian faction, was arrested. Other members of the civilian wing were arrested or fled to the Lebanon, The coup was precipitated by attempts of Jadid and his supporters (culminating at the emergency session of the Tenth National Pan-Arab Congress of the Party) to oust Assad and Tlas from their posts. This power struggle had become acute as a result of differences over support for the Palestine guerrillas during the fighting with the Jordanian army in September. Jadid and Yousef Zayyen, a former Prime Minister, controlled the Syrian guerrilla organization, Saiqa, and supported the movement of tanks from Syria into Jordan to support the Palestinian guerrillas' efforts against the Jordanian army. This Assad and the military faction opposed. Their approach to the Palestinian problem was more akin to Nasser's and they wanted to avoid giving any provocation to Israel, because they considered the Syrian armed forces to be unready to offer adequate resistance.

There was no obvious opposition to the army takeover. Ahmed Khatib became acting President and General Assad Prime Minister and Party Secretary-General. A new Regional Command of the Baath Party was formed. The old leaders were removed from their posts in a purge which stretched into the new year. Saiqa was brought under army control. The Nasserite leanings of the new régime in foreign policy soon became apparent (and presumably helped Assad establish some kind of modus vivendi with the U.S.S.R.). Although Syria continued to reject the November 1967 UN Security Council resolution, relations with the U.A.R. and Jordan improved, and Syria's isolation in the Arab world was soon reduced. Syria's willingness to join a union with the U.A.R., Sudan and Libya almost immediately became apparent and agreement on federation with Libya and the U.A.R. was reached in April 1971. In the same month the Syrian Government advised the Palestinian guerrillas not to initiate any more operations from the Syrian front.

Following amendments to the 1969 provisional constitution in February 1971, General Assad was elected President for a seven-year term in March. In the following month General Abdel Rahman Khlefawi became Premier and Mahmoud Ayoubi was appointed Vice-President. In February, the first legislative body in Syria since 1966, the People's Council, was formed. Of its 173 members, 87 represent the Baath Party.

ECONOMIC SURVEY

In many ways Syma is a land of great economic promise and her economy is basically stronger in several respects than that of her neighbour the Lebanon It might therefore have been supposed that when the economic divorce between the two countries took place in 1950 Syria would do better than the Lebanon Such expectations would not have been realized Political instability interrupted by military dictatorship and accompanied always by the strident claims of extreme nationalism did not advance the country's economic development in the years that followed the separation of the two countries. The development of the country's economy therefore has been determined to a greater degree perhaps than anywhere else in the Middle East by the vaganes of her political history. Thus Syna a decision in 1938 to join Egypt in the United Arab Republic was followed by a period of increasingly severe tlatisms on the Egyptian pattern of that time. The secession of Syria from the U.A.R. in September 1961 was similarly followed by the removal of many of the controls imposed during the preceding three years. The revolution of March 1963 and the worsening of the country's balance of payments in that year caused many of the controls to be brought back though some of them were relaxed in the spring of 1964 However in 1965 over 100 privately owned firms in Syria were nationalized including practically all the more important manufacturing concerns which were not already in public ownership Since the Arab-Israeli war of 1967 the economic penetration of Syra by the communist countries has greatly increased. Something like a third of Syria's visible trade both export and import was with these countries by 1969 the new petroleum industry seems to be mainly managed by Russian technicians and the country's plans for economic development appear to depend very largely on Russian finance

AREA AND POPULATION

The area of Syria is about 72 000 square miles rather less than three-quanters the size of England Wales and Scotland and slightly larger than the state of Misseur; Just over a third of the country's area consists of desert and for some state of the st

AGRICULTURE

There is a narrow strip of land along the coast from the Lebanese frontier to the Hatzy godd to the Turks in 1930 which enjoys a Mediterranean climate and is exceedingly fettile producing olives all kinds of hard and soft fruit cotton and tobacco. East of this strip lies the northward countries and tobacco. East of this strip lies the northward signal that the strip of the strip

ideal stration of Aleppo separated as that city is by no more than 90 miles from Antoch on the Orontes which flows into the Med terminan and by the same distance from the upper Emphrates Aleppo is still a place of importance but since the building of the Suez Canal and the development of air transport the importance of Syna as a link between the East and West has greatly diminished

The grain trop of Syra is of some importance for in somal years there is generally an exportable surplus for the Lebauou and Jordan But the harvest instruction depends on the rainfall which is uncertain and in several years during the last two decades there have been dessitions droughts when there is not only no surplus for export but grain has actually to be imported botably between 1938 and 1960 and during the years 1966 to 1956. The principal crop is wheat to which some 350 on acres are generally sown the volume of the crop average, about 1 oco noo tons in a normal year such as 1969 but in 1970 it fell to about 600 oco tons. Similarly about 1 oco noo tons of the 1960 but in 1970 production, was 200 oco tons so that finctuations can be substantial Other supportant cereal crops are sorghum lentils vetch maize and noe.

Cotton has now come to assume even greater import ance to Syria's economy than the cereal crop Medium staple cotton has been grown in Syria for many years but the high price of cotton after the Second World War and Particularly the dissatisfaction of western spinners with the unpredictable fluctuations in the price of Egyptian cotton during the early fiftee gave a great stimulus to cotton production in Syria In 1950 the area planted to cotton was only about 195 ooo acres and production 35 obo tons By 1955 the area plented was about 625 ooo acres and production 8, ooo tons Since then the yield has greatly improved for though the acreage planted has remained roughly the same the production is generally well over 300 000 tons reaching 382 000 tons in the 1969 70 cotton season ending on August 31st For the following season production was established in October 1970 at about 440 one tons Thus in two decades there has been a note worthy increase in the size of the crop and simultaneously raw cotton has become far and away the country's most important article of export. This progress is partly due to the encouragement given to cotton growers by the govern ment which strictly controls the planting and harvesting of the crop and the quality of the seed used and which has had some success in dealing with the diseases to which cotton is subject.

Fortunately there seems at present little danger that Syria might become like Egypt a one crop economy for apart from cereals and cotton the country produces abundant quantities of fruit and vegetables including grapes figs olives apples pears potatoes onlons and sugar beet of which production was 114 000 tons in 1959. The famous tobacco of Latakia is not a heavy crop and the total yield does not often exceed about 7 000 tons Stock raising also makes an important contribution to the Synan economy and there are large flocks grazed by Bedown in the steppe country west of the Syrian desert in 1967 there were in the country some 5 600 000 sheep 800 000 goats and 300 000 cattle Live sheep and goats are usually exported in large quantities and so is their wool and hair Except in the vicinity of Latakia and in the Jebel Druse in the south of the country the charcoal burner and the goat have deprived the country of extensive forests and the government is much concerned to preserve what remains

AGRARIAN REFORM

In 1958 it was decided to carry out in Syria a land reform similar to that which had been provided for in Egypt under the legislation of 1952. In September 1958 a law was passed fixing the maximum limit of ownership in Syria at 80 hectares of irrigated and 300 hectares of non-irrigated land per person, though certain additional amounts were permitted to be held by the owner for his wife and his children if the additional amount did not exceed in all 40 hectares of irrigated and 160 hectares of non-irrigated land. The land expropriated was estimated at 2.75 million hectares. It was estimated also that about 750,000 persons, or 150,000 families, would benefit by re-distribution. There is good reason to think that discontent arising out of these measures was one of the factors contributing to Syria's secession from the United Arab Republic in September 1961. In May 1962 legislation was passed which, while not repealing the original law of 1958, increased the maximum holding both of irrigated and of non-irrigated land, and permitted the owner to select the land he wished to obtain free of any holders who had settled there under the law of 1958. In 1963 the law was again changed, and the maximum holding of irrigated land was reduced to between 15 and 50 hectares per person, according to the fertility of the land, the maximum holding of non-irrigated land falling to between 80 and 200 hectares per person. By the end of 1969, 1.5 million hectares had been expropriated. Some 380,000 hectares had been redistributed to about 32,000 families and a further 200,000 hectares were not considered by the government as suitable for redistribution.

OIL

During the fifties, oil was discovered in commercial quantities in the north-east of the country. In 1956 a find was made at Karachuk by an American, J. W. Menhall, who later took the Atlantic Refining Co. into partnership, and in 1959 another find was made at Suwadiyah by Concordia, a subsidiary company of Deutsche Erdől A.G. Later a third field was discovered at Rumaila. After several years of discussion about who was to exploit these fields, the government decided in 1964 that concessions should be granted only to the government-owned agency, the General Petroleum Authority. In the autumn of 1967, the government granted a contract to a Soviet firm for the development, on behalf of the General Petroleum Agency, of the Suwadiyah and Rumaila fields.

In the meantime, the government decided to arrange for the construction of a pipeline from these fields to the refinery at Homs (see below) and to the coast at Tartus. The contract was awarded to a British consortium in 1965, but was cancelled in July 1966 because of a dispute with the government and awarded to an Italian firm instead. The pipeline, which has a capacity of about 5 million tons per annum and runs for some 400 miles, was opened in May 1968, but at this point only one of the fields, that at Suwadiyah, was in production. Shortly after, the Karachuk and Rumaila field came into production. The port of Taitus is capable of taking 80,000-ton tankers, but is being expanded to take vessels of 120,000 tons. In 1969 the total oil production of the country was about 3 million tons, increasing to about 5 million tons in 1970, when it earned the equivalent of £820-825 million from export. Two other fields have been discovered at Jubaisah and Malikiyyah, plans are being made with Soviet assistance to expand the capacity of the pipelinc, and in 1969 the Minister of Oil said he hoped that in four or five years' time production would be 15 million tons a year.

Apart from this, there are two systems of international pipelines which run across Syrian territory, and are of

great importance to the national economy. Of these, one follows the line of the original pipe of 1934 (though newer and larger pipes have since been laid by the side of the first pipeline) from the Iraq Petroleum Company's installations at Kirkuk to a point west of Homs. There it forks, one branch running south-west to Tripoli in the Lebanon, and the other, which was completed in 1952, not leaving Syrian territory, but turning north-west to reach the coast at Banias. The other system is Tapline, the pipline which runs from Aramco's installations in Saudi Arabia to Sidon in Lebanon and in doing so crosses about 100 miles of Syrian territory, though some of this is now Israel-occupied. From the transit payments made to the government large sums in foreign exchange enter the country.

The transit dues payable to Syria by the Iraq Petroleum Co. are much larger than those payable by Tapline because the length of the latter, which is inside Syrian territory, is much smaller. Ducs payable by the Iraq Petroleum Co. were increased as the result of an agreement concluded in July 1971 for about £22 million to £34 million a year, the company undertaking, however, to increase throughput by the end of 1972 to the point where the dues would amount to more than £36 million a year. The dues payable by Tapline also were increased in January 1971 from about \$4.5 million a year to about \$8.5 million a year. Both lines have been subject to interruption by sabotage or military action. For example, in March 1969 Tapline was blown up by Arab guerrillas where it passes across the Golan Heights, since 1964 in the occupation of the Israelis, and it could not be repaired and reopened until the following September. It was out of action again for two short periods before the end of 1969 because of sabotage in Lebanese territory; and because of an accident to it in Syria in March 1970 it was once more out of action until the end of January 1971. These interruptions have caused a serious loss of foreign exchange to the government.

INDUSTRY.

Shortages of consumer goods during and immediately after the Second World War had induced the government to encourage the expansion of local industries by increasing duties on imported consumer goods, exempting new concerns from taxation and making credit available. The result was a remarkable expansion, and the production of electric power increased between 1960 and 1969 from an average of 30.7 to 85.2 kWh. per month. In July 1961, when Syria was part of the United Arab Republic, most industries were nationalized but after the break with Egypt in September 1961 many of them were denationalized in the spring of 1962, except for a large textile concern and certain flour mills. However, the provision of the legislation of July 1961, whereby companies were required to distribute 25 per cent of their profits to the workers, was retained, and as mentioned above there was a further wave of nationalization in 1965.

The principal industrial centres are around Damascus, Aleppo, Homs and Latakia. Exactly how many people are now occupied in industry is not certain, but in 1953 the Benthall Mission, which visited Syria on behalf of the British Board of Trade, stated that the textile industry alone employed some 60,000 persons. This is certainly the biggest single industry, and in recent years many modern spinning and weaving mills have been installed to spin or weave local cotton and imported yarn. The country's production of cotton yarn increased between 1950 and 1967 from 4,700 to over 17,000 tons. There has also been an important development of the cement industry, the production of coment having increased from 3,200 tons a month in 1951 to 77,800 tons a month in 1969. A sugar refincry has been installed at Homs to process local sugarbeet. There is an important vegetable-oil-refining industry, and a number of large tanneries, in addition to the usual industries for processing of foodstuffs, such as miling, canning and brewing In 1959 a petroleum refinery at Homs was completed by a Czechoslovak group at a cost of \$554 million In 1966 it produced about one million tons of products In 1966 work started on the building of a nitrogenous fertilizer plant also at Homs Recently the glass industry the secret of which according to Pliny, was discovered in Syria, has been revived and a factory is now in operation outside Damascus All in all, Syria's mannfacturing industries, though relatively new, have become an important element in the country's economy, and it has even been said that the contribution industry is making to the national income is nearly half that made b agriculture So far as is known, Syria possesses few minerals of commercial value apart from oil Chromium has, however, been mined near Latakia in recent times, and asphalt in the Jebel Ansariyeh There is also asphalt in the region of Derrez Zor

EXTERNAL TRADE

There has been a noteworthy expansion in the country's foreign trade since the separation between Syria and the Lebanon in 1950, though Syria's exports, being mainly agricultural, finctuate severely with chmatic conditions. Thus the value of exports increased from £5.271 million in 1951 to £972 million in 1954, falling because of bad cereal parvests to £593 million in 1969 and recovering to £973 million in 1964 and recovering to £973 million in 1964 at a several concept and the several concept that the several concept was £973 million in 1967 and the several concept was £973 million that followed reaching £51 cop million in 1967, and in 1970 it is estimated to have been about £81 374 million. There has consequently been a proportionately heavy increase in the adverse balance of visuals trade during this past decade or so

As already indicated, the principal export is raw cotton, which is 1969 accounted for 4,1 per cent of the total value of exports. The value of raw wool exports generally amounts to about 5, per cent of the total. As already methoded large quantities of cereals are exported when secontied for no more than about 5, per cent. Law animals, mainly sheep and goats amounted to about 13 per cent of the total value of exports in 1969 but by 1969 the value of petroleum exports already accounted for 10 per cent of the total value of exports in 1969 but by 1969 the value of petroleum exports already accounted for 10 per cent of the total value of 10 per cent of the total value of 10 per cent of the total value of 10 per cent of the total value of unports consist and extiles for another 11 per cent, in spite of the light tariff imposed to protect the local industry Petroleum toko

another 10 per cent Lebanon France and Italy were formerly the largest bnyers of Syria's exports Syrian grain and cotton in normal years being exported in considerable quantities to these countries In 1935 for example, the Lebanon took 23 per cent of Syria's exports, France 12 per cent and Italy 11 per cent But the economic penetration of Syria by the USSR, the Eastern European countries and China has resulted in important changes. By 1969 no less than 38 per cent of her exports went to these countries of which just under half went to the Soviet Union though about 31 per cent still went to the other Arah countries, the share of Italy and France in 1969 being 12 and 3 per cent respectively Nor has the West been able to maintain its share of Syria's import trade. In 1965, 12 per cent of the value of her imports was supplied by Western Ger many 11 per cent by the United Kingdom 9 per cent by the United States and 8 per cent by France, the proportion then being bought from the Soviet Union and the other

communst countries standing at 11 per cent. By 1969, their share had mcreased to 31 per cent of the total value of imports but the percentage supplied by Western Germany, the United States and France had fallen to 7, 5 3 and 7 per cent respectively The other principal suppliers in 1969 were the other Arab countries with 14 per cent and Italy with 9 per cent

In 1952 Syria and Iraq entered into negotiation designed to eliminate commercial barriers between them Each agreed to issue import beeness for goods mannfactured in the other state, to foster joint industrial cooperate benefits of the property of the pro

FINANCE

According to the latest figures available published by the International Monetary Pund Syrar's balance of international payments showed a deficit of US \$92 million on current account in 1965. There was a visible trade deficit of US \$163 million siter adjustment by the IMF, and this was partly offset thy current invisible items, mainly private donations consisting of remittances by Syran emigrants to America and West Africa, of recepts from oil companies and other services amounting in all to US \$77 million net. The blancae was made good by US \$77 million net The blancae was made good by US \$78 million, and at the end of Sptember 1970 stock at US \$90 million, and at the end of Sptember 1970 stock at US \$50 million, excluding Special Drawing Rights of US \$50 million, excluding Special Drawing Rights of

The international price of the Syrian pound remained remarkably stable after devaluation in 1949, until the promise of the introduction of a new currency as part of the economic reform entailed by the establishment of the United Arab Republic led to a flight of Syrian capital into foreign holdings and caused a sharp depreciation in the value of the Syrian pound. Shortly before the secession of Syra from the United Arab Republic, severe exchange restrictions had to be introduced, most of which were removed in the following summer only to be imposed again in May 1963 The restrictions failed to stop the drain on the country's exchange reserves, and negotiations eventually took place with the International Monetary Fund as the result of which the Fund agreed to a new stand by arrangement in 1964 Syria's quota in the Fund had been increased shortly before to \$38 million, an increase of \$18 million, which was fully drawn by the end of 1964 Syria for her part undertook to introduce a limited free exchange market, to restrict imports and to refate the growth of money supply to the increase of economic activity In the autumn of 1967 the fund permitted Syria to make a special drawing of \$10 million. and the net amount owing to the fund in April 1971 also was \$19 million. The free rate of exchange was kept stable at about £84 20 to the US dollar and £810 1 to the £ sterling for 1968 and 1969, since which it has depreciated standing at the end of 1970 at £S4 32 to the US dollar, or £SII 3 to the £ sterling

Until 1955, the currency was managed by the Banque de Syre et du Liban, a commercial bank formerly associated with the Ottoman Bank but in that year these functions were taken over by a new state-owned Central

Bank of Syria. Apart from the Banque de Syrie et du Liban, several other foreign banks operated in Syria, including the British Bank of the Middle East, but neither Damascus nor Aleppo acquired the importance of Beirut in the world of international finance. In 1959 a new industrial bank was established with 55 per cent of the shares held by the government. While Syria was a part of the United Arab Republic, all foreign banks were nationalized, the British and French banks having been under sequestration since 1956. After Syria broke with Egypt most of the Arab-owned banks were denationalized, but in May 1963 all the banks still in private hands were nationalized once more. At the beginning of 1967, the nationalized banks were merged into one institution named the Commercial Bank of Syria; the Industrial Bank and the Agricultural Bank which existed already were given the role of financing industry and agriculture respectively. Two new banks were formed, a Real Estate Bank to handle construction and a Popular Credit Bank to provide credit for personal needs.

There has been a constant and steady increase in the expenditure of the state during the past few years, and between 1953 and 1961-62 expenditure rose from £S 205 to 552 million, largely owing to the increased cost of defence. For the calendar year 1971, estimated ordinary budget expenditure was estimated at £S1,443 million compared with £S1,391 million in 1970. Getting on for half of the ordinary expenditure is spent on defence, excluding the cost of the internal security forces, and rather less than 20 per cent on education. In addition, there is an extraordinary budget covering expenditure on public utilities and on development. For 1971 the extraordinary budget estimated expenditure at £S1,426 million compared with \pounds S1,396 million in 1970, so that in 1971 total expenditure was estimated to be £S2,869 million compared with £S2,737 in 1970. There has been a steady increase in the debt of the government to the Central Bank. At the end of 1960 it amounted to £S451 million. By September 1970 it amounted to £S2,358 million. As the result of the conference of Arab states held in August 1967 after the Arab-Israeli war of that summer, Kuwait, Libya and Saudi Arabia agreed to grant financial assistance to the states which had suffered heavy losses. Syria's share was U.S. \$40 million per annum.

ECONOMIC DEVELOPMENT

It has always been recognized that Syria is no less dependent on foreign capital and foreign techniques for her economic development than any other country in the Middle East. Since World War II, a series of attempts have been made to work out a comprehensive plan for the economic development of the country on the basis that a substantial part of the cost would have to be borne by foreign capital. In 1946, for instance, the British firm of engineering consultants, Sir Alexander Gibb and Partners, made a survey of the country, as the result of which several important projects were put in hand. In 1954, the government asked the International Bank for Reconstruction and Development to examine the problem of the country's economic development afresh, and the bank recommended that the government should adopt a six-year plan. In 1957 the government agreed to accept a loan from the U.S.S.R. for specific schemes of economic development amounting to £50 million sterling bearing interest at 2½ per cent per annum. The kaleidoscopic changes in the country's relations with Egypt introduced a further element of instability into Syria's economic life, and this created obstacles to steady economic development. Since 1967, Syria appears to have relied more and more upon the Russians for their development plans, as regards both

technical assistance and finance, and it is not easy to follow exactly what has been happening.

Nevertheless, a good deal of progress was made on several of the more important schemes included in the earlier plans. The construction of a new port at Tartus, recommended by the Gibb report, and made more than ever necessary by the economic divorce of Syria from the Lebanon and the free port of Beirut in 1950, carried out by Yugoslav contractors. The drainage of the Ghab marshes created by the flooding of the River Orontes between Latakia and Alcppo, which would irrigate an additional 100,000 acres, was put in hand as the result of the Gibb report and that of the World Bank. Similarly the construction of the oil refinery mentioned above, which was included in the six-year plan produced by the World Bank, was realized in 1959, as stated above.

Moreover, finance was found abroad for several other schemes of some importance. Among these were a longterm loan of about \$15 million from the United States Government for the construction of grain silos, a credit of \$15 million from Poland for the purchase of agricultural machinery, and a similar credit of up to \$50 million from France, all in 1962; in 1963, the International Development Association made \$8.5 million available for the foreign exchange cost of surveying the road system and strengthening the Department of Highways and Bridges. In 1967 a French firm arranged to provide credit to the government totalling about \$40 million, to finance work on the road from Damascus to Alcppo and the construction of grain silos; in 1969 loans of \$50 million were obtained from Eastern Germany for the construction of steel projects, and of KD3 million from Kuwait for silos.

In 1966 details were published of a five year plan for economic development for the period 1966-70. It was then estimated that the total expenditure would be £S4,955 million or about \$1,300 million, and that it would, when realized, increase the net national product by rather more than 7 per cent per year. In 1968 this was exceeded, the growth rate in that year having been just over 8 per cent according to the government, though no figure for the G.N.P. has been given by the IMF monthly bulletin for any year since 1965. The main projects covered by the plan were the realization of the first phase of the Euphrates Dam project, the development of the oilfields in the northeast and the construction of the pipeline to the Mediterranean, irrigation and agriculture, the establishment of the nitrogenous fertilizer plant at Homs, and important schemes for the electrification of the country and the improvement of communications. Some details were given in April 1971 of the five-year plan covering the years 1971 to 1975. The total expenditure over the period was to be £S8,000 million, or about U.S. \$1,900 million. Of this £S1,593 million were to be spent on the Euphrates Dam project, described below. A further £S1,489 million were to be allocated to public utilities and £S1,323 to industry. Electric power and petroleum were to receive £S1,014 million, of which just under three-quarters was to be spent on petroleum largely on exploration and development. The plan included also allocations of £S883 million for transport and communication, £S576 million for agriculture, and £S352 for irrigation and land reclamation. Little was said as to how the plan was to be financed, but as will be seen above, £S1,426 million was to be provided in 1971 out of the extraordinary budget for economic development.

The most ambitious of the projects contained in these five-year plans is the Euphrates Dam project. This is a scheme for constructing a huge dam on the Euphrates connected with a power station having an initial capacity of 200,000 kWh., and the digging of certain canals which would lead to the irrigation of about 1,640,000 acres of

SYRIA-(ECONOMIC SURVEY)

land. The difficulties which this plan faces are not only feanmable by political for it would of course be accessing cancel but political for it would of course be accessing and Iraq on how the waters of the Emphates would be shared before the project could be finally realized. Not withstanding these problems in 565; the West German authorities agreed to provide credits of up to DM 350 million towards meeting the foreign exchange costs Perhaps because of the worsening of relations between Germany and the Arab world arising out of the problem of Israel the German offer of finance was dropped in 1965. In April 1966 however an agreement was reached with

the U S 5 R. which consented to give the Syrains technical and financial assistance on the first phase of the scheme It was estimated that this phase would cost some £St oo million or about \$750 million to which the U S R. would lend the Syrains £S600 million to \$157 million to cover the foreign exchange costs. The whole scheme and its associated hydro electrical project was estimated at the time to cost about £Ss and million or about £652 million. Work began on the dam in the spring of 1968 with the assistance of large numbers of Sowiet experts by 1960 considerable progress was reported and in that year some 2x per cent of the development budget was appropriated

THE CONSTITUTION

The constitutional position remained confused after the dissolution of the union with Egypt in 1961 antil the promulgation of a new provisional constitution in May 1969 This declared that 'the Syrian Arab region will constitute a democratic popular and socialist republic' in which the Baath will be the sole political party A People a Assembly will be the supreme power in the state, and it will choose the President of the Republic and ratify laws The republic will have a planned socialist economy but private property rights will be respected In practice much power has in the hands of the Baath Party, especially its spricen member leadership committee and its minemember Political Bureau

Raligious Courts for Non-Muslim Communities

OTHER COURTS

Courts for Minora: their constitution officers sessions jurisdiction and competence are determined by a special

Military Court: Damascus

RELIGION

In religion the majority of Syrians follow a form of Sunni orthodoxy that is somewhat suspect to stricter Muslims by reason of the elaboration of ritual, and tolerance of art and ornament. There are also a considerable number of religious minorities: Muslim Shi'ites; the Ismaili of the Salamiya district, whose spiritual head is the Aga Khan; a large number of Druses, whose religion is secret, and is concerned with the transmigration of souls; the Nusairis or Alawites of the Jebel Ansariyeh, who combine features of Christianity and Islam with pre-Christian fertility rites; and the Yezidis of the Jebel Sinjar, who propitiate the power of evil.

Muslims

Grand Mufti: Ahmad Kuftaro.

Most Syrians are Muslims. Nearly all are Sunnites with a small number of Ismailis and Shi'ites.

CHRISTIANS

Greek Orthodox Patriarch: GHOFRAIL FADDOUL.

Greek Catholic Patriarch: H.E. MAXIMOS V. HAKIM; Bab-Sharki, Damascus; P.O.B. 7181, Beirut, Lebanon. Syrian Orthodox Patriarch: His Holiness Ignatius Yacob

THE PRESS

Since the coming to power of the Baath Arab Socialist Party the structure of the press has been modified according to an extreme socialist pattern. Most publications are published by organizations such as political, religious, or professional associations, trade unions, etc. and several are published by government ministries. Anyone wishing to establish a new paper or periodical must apply for a licence.

The major dailies are al-Baath (the organ of the party) and al-Thawrah in Damascus, al-Jamahir al-Arabia in Aleppo, and al-Fida and al-Ouruba in Hama and in Homs respectively.

PRINCIPAL DAILIES

- Aravelk: Aleppo; Armenian; morning; Editor Dr. A. Angykian; circ. 3,500.

EDUCATION

Compulsory schooling lasts six years up to the age of 14, and text books are issued free in the primary sector. Both primary and secondary education are expanding rapidly.

In 1967-68 782 new classrooms were erected, partly government financed. The private sector still accounts for approximately 18 per cent of primary schoolchildren, but the numbers in public education increased by 5.4 per cent in 1967-68; the comparable figures for secondary education are 40 per cent and 18.9 per cent. Technical schools prepare students mainly for work in agriculture and are open to the sons of peasants. Higher education is provided by the Universities of Damascus and Aleppo.

The main language of instruction in schools is Arabic,

but English and French are widely taught and are used for instruction in the University of Aleppo.

There is still a great shortage of teachers in all types of school. It is hoped that an increase in training facilities and the number of scholarships available for study at home and abroad, combined with the introduction of a special class of pupil-teachers who are paid during training will help to remedy the shortage.

Outside the schools system a functional literacy programme has been implemented in the industrial and agricultural sectors with a resulting 20 per cent increase in literacy in 1968 as compared with the previous year.

Tunisia

PHYSICAL AND SOCIAL GEOGRAPHY

Tunisia is the smallest of the four countries that comprise the "Maghreh" of north Africa but it is more cosmopolitan than either Algeria or Morocco It forms a wedge of territory, some 48,200 square miles in extent, between Algeria and Libya It includes the easternmost ridges of the Atlas Mountains but most of it is low lying and bordered by a long and sinnous Mediterranean coastline that faces both north and east. Ease of access hy sea and hy land from the east has favoured the penetration of foreign influences and Tunisia owes its distinct national identity and its varied cultural traditions to a succession of invading peoples' Phoenicians Romans, Arabs, Turks and French It was more completely Arabized than either Algeria or Morocco and remnants of the original Berber-speaking population of the Maghreh are confined, in Tunisia, to a few isolated localities in the south

In 1966 the population was 4 437,862 and the overall density was 9 a per square mile Most of the people live in the more humid, northern part of the country and nearly one sixth of the total are concentrated in the sprawing city of Turus (population 764 pool) Strated strategically where the Sicilian Channel links the western with the central Mediterranean and close to the sixt of ancient Carthage, Turus combines the functions of capital and chief port No other town approaches Turus in importance but on the east coast both Sousse (population 76,000) and Slax (population to 600) provide modern port facilities, as does Busetta (population 76,000) on the north coast while some distance inland the old Arata capital and holy city of Kaironan (population 40,000) serves as a regional centre

The principal contrasts in the physical geography of Tunisia are between a humid and relatively mountainous northern region a serm and central region of low plateaux and plains and a dry Saharan region in the south The northern region is dominated by the easternmost folds of the Atlas mountain system which form two separate chains, the Northern and High Tell, separated by the valley of the River Medjerda the only perennially flowing river in the country The Northern Tell, which is a continuation of the Algerian Tell Atlas, consists mainly of sandstone and extends along the north coast at heights of between 1,000 and 2 000 feet South of the Medjerda valley the much broader Tell Atlas, which is a continuation of the Saharan Atlas of Algeria, is made up of a succession of rugged sandstone and himestone ridges Near the Algerian frontier they reach a maximum height of 5 065 feet in Diebel Chambi, the highest point in Tunisia but the folds die away eastward towards the Cape Bon pennsula which extends north east to within 90 miles of Sicily.

South of the High Tell or Dorsale ("backbone") central Timusa consists of an extensive platform along gently towards the east east Its western half, known as the High Steppe, is made up of alluvial beans numed by low, barren mountains but eastward the mountains give way first to the Low Steppe, which is a monotonous gravel everted plateau and ultimately to the flat coastal plain of the Sahel Occasional watercourses cross the Steppes hat they only flow after heavy rain and usnally fan out and evaporate in salt flats, or sobkhas, before reaching the sea

The central Steppes give way southward to a broad depression occupied by two great seasonal salt false or shorts. Tho largest of these, the Short Djend, hes at 32 feet below sea level and is normally covered by a salt crust. It extends from close to the Mediterranean coast near Gabba almost to the Algerian frontier and is adjoined on the north-west by the Short el Rharsa which he sat 65 feet below sea level. South of the obotts Tunisia extends for over 200 miles into the Sahara Rocky, flat topped mountains, the Monts des Ksour, separate a flat plain known as the Djeffara which borders the coast south of Gabbs, from a sandy low-land which is partly covered by the dunes of the Great Eastern Ere.

The climate of northern Tunisia is "Mediterranean" in type with hot, dry summers followed by warm, wet winters Average rainfall reaches 60 inches in the Kronmirie Mountains, which is the wettest area in north Africa, but over most of the northern region it varies from 16 to 40 inches. The wetter and least accessible mountains are covered with forests in which cork oak and evergreen oak predominate, but elsewhere lower rainfall and overgrazing combine to replace forest with meagre scrub growth, South of the High Tell rainfall is reduced to between 16 and 8 inches annually, which is insufficient for the regular cultivation of cereal crops without irrigation, and there is no continuous cover of vegetation. Large areas of the Steppes support only clumps of wary esparto grass, which is collected and exported for paper manufacture Southern Tunisia experiences full desert conditions Rainfall is reduced to below 8 inches annually and occurs only at rare intervals Extremes of temperature and wind are characteristic and vegetation is completely absent over extensive tracts. The country supports only a sparse nomadic population except where supplies of underground water make cultivation possible, as in the famous date-producing oasis of Tozeur on the northern edge of the Shott Djend

DRH

HISTORY

Although the creation of the present-day independent Republic of Tunisia has been a phenomenon of the post-war period, the history of this small but important part of North Africa has displayed a certain continuity since the earliest times. From the early days of Phoenician settlement in the course of the ninth century B.C., the region has alternated between being itself a focus of political control (the Carthaginian Empire, or the period of medieval Islam, for example) reaching out to colonize or dominate the adjacent shores of the Mediterranean; and being the object of imperial aggrandizement (Rome, the Ottoman Empire, France) on the part of the dominant Mediterranean power of the time. On top of this pattern must be superimposed the conquest of North Africa by the Arabs in the course of the seventh century A.D., which has determined the basic characteristics of Tunisia ever since.

The history of Tunisia may be said to begin with the establishment there of colonies of Phoenician settlers, and the rise of the Carthaginian Empire. Emerging, in the course of the sixth century B.C., from the mists of its legendary foundation by the semimythical Queen Dido, by c. 550 B.C. Carthage had reached a position of commercial and naval supremacy in the Mediterranean, controlling part of Sieily, and with trading colonies established as far as what is now southern Portugal. The empire reached its height in the course of the fourth century, but shortly afterwards became involved with the rising power of the Roman Republic in a bitter struggle for the hegemony of the Mediterranean. The Punic Wars (264-241; 218-201; 149-146), of which the second is memorable for Hannibal's invasion of Italy, ended in the utter destruction of Carthage as a political entity, and the incorporation of its domains within the growing empire of Rome.

After one and a half centuries of abandonment, the ancient site of Carthage was rebuilt by Augustus at the dawn of the Christian era: intensive eolonization from this time onward brought to what had become the Province of Africa a new prosperity, and the blessings of Roman civilization. During the first two centuries A.D. Carthage was generally accounted the second city of the Empire after Rome, but with the decline of the Empire in the west in the course of the fourth century, the great days of Roman Carthage were over. In A.D. 439 the city was lost to the Vandals, a nomadic people of Germanic origin, and became the capital of their ephemeral state, to be recovered for the Byzantine Empire in 533-34.

For the next two hundred and fifty years the history of Tunisia cannot be separated from the larger account of North Africa. Although Byzantine rule was better established in Tunisia than in the rest of the area, it was by no means secure. The tendency of the local governors to free themselves of the control of Constantinople was echoed by religious dissensions

among the native population, who, largely Berber in origin, adopted various Christian heresics as tokens of their opposition to Imperial rule.

It was from another quarter, however, that the final challenge to Byzantine rule was to come The foundation in Arabia of the power of Islam, and its rapid expansion after the death of the Prophet (632), led quickly to the Arab conquest of Egypt and Syria, and to the shattering of the precarious unity of the Byzantine Empire. The first Arab raids into North Africa soon followed (647). After a confused period. in which the Arabs, the Berbers, and the forces of Byzantium all contested for the control of North Africa, Arab control over the area was finally established (698) with the conquest of Carthage, and the foundation of the town of Tunis. Islam now spread rapidly amongst the Berbers, but did not prevent them from making further attempts to regain their independence, merely providing them with new and more convenient pretexts for revolt in the shape of new Islamic religious heresies. The greater part of the eighth century is taken up with Berber-supported Kharijite risings, manifestations of extreme left-wing Islam against the central government, and with constant revolts among the occupying Arab forces. In the last years of the Ummayad dynasty (overthrown 748-50) Tunisia escaped completely from Imperial control: the new dynasty of the Abbasids, ruling from Iraq, made strong efforts to recapture the province. Kayrawan, founded in 670 as the centre of Arab rule in the Maghreb, was retaken, but lost in 767, when a period of complete anarchy ensued. After a period of rule by petty chieftains. Tunisia was restored to Abbasid control in the year 800, in the person of Ibrahim ibn Aghlab. As a reward for his services, and as a means of maintaining the form if not the actuality of imperial control over the area, the caliph Harun al-Rashid thereupon appointed him as tributary ruler of al-Ifrikiya-corresponding more or less to the Roman Province of Africa, and to the present-day state of Tunisia.

The period of Aghlabid rule is one of great importance for the history of Tunisia. For the major part of the ninth century the country enjoyed a relatively stable and prosperous existence, while the importance of the dynasty was early recognized by the arrival of an embassy from the Emperor Charlemagne. Some years later, returning in a different way the interest of Europe, Aghlabid forces began the conquest of Sicily (827-39). The middle of the ninth century was the zenith of Aghlabid rule, and was signalized by the emir Ahmed with the construction of great mosques in the major cities, and the building of an elaborate system of dams and reservoirs to supply the capital of Kayrawan. From 874 the power of the Aghlabid state began to decline; despite the virtual completion of the conquest of Sicily (878) the dynasty was finally overthrown in the course of a religious revolution from the

west Between 905 and 909 Tunisia was brought under the control of the Fatimids, adherents and fanatical propagators of the heretical dectrines of Shrism Established in their new capital of Mahdiya, on the Tunisian coast, the Fatimids pursued a vigorous policy of expansion and conquest Expeditions were sent against Egypt, and Sicily was once more ruled from North Africa while by 933 Fatimid rule was estab-lished throughout the Maghreb A serious threat to the regime posed in 943-47 by the terrible Berber revolt led by 'the man with the donkey", was overcome, and for the next twenty five years Tunisia enjoyed a certain degree of prosperity Fatimid power meanwhile was expanding in the east In 969-70 the dynasty gamed control of Egypt and Syria three years later the caliph al Muizz abandoned Mahdiya for his new capital of Cairo and handed over the government of Tunisia to the Zirids a family of Berber princes who had long supported the Fatimid regime Under Zirid rule Tunisia enjoyed great prosperity, in which the arts and sciences commerce and industry, all flourished, but this golden age was suddenly brought to an end in 1050 by the Zirids transferring their allegiance from Cairo to the orthodox caliph at Baghdad Faturud revenge was terrible In 1031 hundreds of thousands of Hilali Arab nomads were sent against Ifrikiya from Egypt Under the devastating impact of these marauding nomads the economy crumbled along with the political power of the Berbers and the country as a whole lapsed into political fragmentation Further troubles now came from another quarter In 1087 forces from the rising Italian city states of Pisa and Genoa took Mahdiya, allowing the Zirids who had beld out there against the Hilali invasion, to continue as its rulers. Early in the twelfth century the Zinds renewed their loyalty to Caro and attempted to restore the shattered fragments of their state but were interrupted by the Normans who, having previously conquered Sicily and Malta in 1148 drove the last Zirid from Mahdiya

Normanule in Tunisia was short lived. By 1160 they had been ejected from their last coastal stroughold, and for the next fifty years Tunisia formed part of the engine of the calphys of Marakesh (the Alumhads) With the thirteenth century the authority of Bagidad was briefly restored ever Tunisia. In 1207 the Abhasid calph al Nasir set up a strong provincial government under a member of the Berber family of the Hafsids, who having held the governorship of Tunis since Its were to continue as the main political force in the area until the Ottoman conquest late in the auteenth centure.

For the most of the thatteenth entury the Hafsads unled over North Africa from Typol to central Algena, and maintained close diplomater and contained relations with the trading ports and cry takes of the northern shores of the Mediterranean European minerst in Tunnas had never disappeared since the temporary Norman conquest of the twelfth century with the weakening of Hafsid rule in face of tribul and Arab unrest Jerha came once more into Christian bancks (1245–1337) In the reign of Abril 1370–341 the fortunes of the dynasty once more improved, and further Christian attempts to sense

coastal places were repelled His son held off repeated Scatian and Catalan attempts to capture Jerba, and in 1428 went on the offensive, becoming involved in operations against Malta The last Hafsad ruler of note was Abu Ann Uthman (1435-88) Shortly after his death the Hafsad Empire began to disathegrate, and at the same time Timisa became involved in the wider struggle between the resurgent forces of the newly united Spanish menarchy and the Ottoman Empire for control of the Mediterranean, the outcome of which conflict was to determine the future of Tunisa for the next four centuries, and to mark its emergence as a definite political entity

OTTOMAN RULE

With the completion of the reconguista in 1492 by the incorporation of the Muslim kingdom of Granada, Spain turned her attentions to the conquest of Mushim North Africa The first place in the crumbling Hafsid territories to fall under ber control was Bougie, in 1510 and then Tripoli, in the same year Ten years later the strategic place of Jerba also fell But these events bad already produced a reaction In 1516 Algiers had come into the possession of the Turkish corsair Arus His brother, Khayr ed-Din Barbarossa, who had succeeded him in 1518, had in 1533 been summoned to Istanbul to act as high admiral of the Ottoman fleet In this new capacity be drove the compliant Emir al Hasan from Tunis (1534), and placed the town under Ottoman control In the following year a great Spanish naval expedition retook the town, and al Hasan returned as the Emperor's vassal, handing over la Goleta to Spain as the price of his restoration Further coastal strongholds subse quently passed into Spanish bands while in 1542 al-Hassan was deposed by his son Ahmed, who, with the not disinterested help of the Turkish corsair chiefs, made a final attempt to reunite Timisia against Spain After a long drawn-out struggle Ahmed fell at the siege of Malta, 1565, which together with the Spanish naval victory of Lepanto six years later, marks the climax and virtual end of their struggle with the Ottomans for control of the sea. As far as Tunisia was concerned, the sole beneficiaries of the struggle were the Ottomans Already well established at Algiers, in 1569 the Pasha of Algiers, Uluj Ali, placed a garrison in Tunis, only to be driven out briefly (1572) in the aftermath of the Spanish victory at Lepanto The unfortunate Haisid was restored for the last time as nominal ruler but in 1574 an Ottoman expedition put an end to Spanish power in Tunis, and to the Hafsid dynasty itself

Direct Ottoman rule in Algiers lasted only seventeen years. The provincial administration set up in 1374 took its orders at first from Algiers, and later from the Porte istell, but a multary revolt in 1591 reduced the power of the Pasha, the actual representative of the sultan, to a crypher, and the affairs of the state were taken over by one of the forty days or high officers of the Ottoman army of occupation. By c 1600 a situation had ansen analogous to that in Algiers the dwarn, or governing council commit to share a pre-eminent place with the taila or guild of the corsair chiefs. By 1606 the day fauto independence of Tunusa had been

recognized by the dispatch of a French embassy, under orders to negotiate commercial privileges with Tunis without reference to the Porte. Nevertheless, for the next two and a half centuries and more, Tunisia was regarded as part of the Ottoman Empire, a convenient fiction both flattering to the government at Istanbul, and useful to the deys in safeguarding their rule and bolstering their reputation with outside powers.

In the first half of the seventeenth century the situation of Tunis was fairly flourishing. Trade and commerce, especially with Marseilles and Livorno, prospered, while commercial relations were entered into with states as far distant as England and the Netherlands. From c. 1650 the power of the deys declined, and authority in the state gradually passed to the beys, originally subordinate in rank. Hammuda, bey from 1659 to 1663, became master of the entire country, and assured the maintenance of power in his family—the Muradids—until 1702. This was a period of decline, with tribal unrest away from Tunis, and incursions from the direction of Algiers. With the accession of Huseyn Ali Turki in 1705 a new line of beys brought some semblance of order to the country. The remainder of the eighteenth century passed fairly uneventfully for Tunisia, with a certain amount of quiet prosperity, despite the uncertainty of relations with Algeria, and the growing naval power of Europe in the Mediterranean.

With the aftermath of the Napoleonic Wars came the first real impact of Europe on Tunisia. The European powers, in congress at Vienna and Aachen (1815-17) forced upon the bey Mahmud (1814-24) the suppression of the corsairs and their piratical activities, which had provided a considerable part of the revenues of the state. The French occupied Algiers in 1830, and subsequently reduced the whole of Algeria to colonial status. The next fifty years witnessed desperate but unavailing efforts by Tunisia to avoid the same fate. Increasingly the influence of France and Britain, and later Italy, came to be manifest through the activities of their consuls. The bey Ahmed (1837-55) attempted to reform the army on western lines, and to liberalize the institutions of society: his efforts merely increased the financial dependence of Tunisia on France. Under Muhammad (1855-59) a proclamation of reform and equality based on the Ottoman Hatti-Sherif of 1839 was promulgated under European pressure: his successor Muhammad al-Sadik (1859-82) promulgated a Constitution (suspended 1864) which attempted to separate executive from legislative power, to codify the laws, and to guarantee the independence of the judiciary.

Nevertheless, Tunisia's position deteriorated. Increased taxes, imposed from the mid-fifties, provoked tribal rebellion, and the growing dependence on foreign loans led to foreign intervention. Annual debt charges eventually exceeded revenue and in 1869 the bey was obliged to accept international financial control by France, Britain and Italy. By 1881 the imminence of financial collapse decided France to intervene, especially as at the Congress of Berlin three years earlier Britain, confronted by French hostility to the

Cyprus Convention between Britain and Turkey, had indicated that it would not contest French influence in Tunisia, which Germany actually encouraged. French forces invaded Tunisia in April 1881, the immediate occasion being incidents on the frontier with Algeria. They encountered no serious resistance and the bey was forced to accept the terms of the Treaty of Kassar Said (also known as the Treaty of Bardo) under which he remained the nominal ruler of his country while French officials took over the direction of military, financial and foreign affairs.

FRENCH PROTECTORATE

The French presence once established, French control was soon extended. In 1883 Ali IV, the successor to Muhammad al-Sadik, was forced to sign the Treaty of Mersa, which formally established a French protectorate over Tunisia and brought the actual government of the country under French control. Although the office of bey was preserved, the real power passed to the French Resident-General. The international control commission was abolished in 1884, the currency was reformed on French lines in 1891, and the extra-territorial privileges of other Europeans were abrogated. Encouraged by largescale grants of land, there was a considerable influx of settlers from France, and also from Italy, especially after 1900. Besides being confronted with the task of sustaining the economy by something better than the proceeds of piracy, which they tackled by investment in the development of the country's resources, the French were faced with rivalry from Italy, whose ambitions in North Africa were not extinguished until the collapse of the Fascist regime in the Second World War, and with the rise of Tunisian nationalism.

Tunisian cultural and political life absorbed many French ideas but was also influenced by movements in other parts of the Islamic world. An attempt to emulate the Young Turk reformers in the Ottoman Empire was seen in the Young Tunisian movement (1908) which called for the restoration of the authority of the bey together with reforms on democratic lines. The achievement of independence in eastern Arab countries after the Second World War, and the example of the nationalist movement in Egypt, inspired Tunisians with a greater national consciousness and in 1920 the Destour (Constitution) movement was formed under the leadership of Shaikh al-Tha'libi, one of the founders of the pre-war Young Tunisians.

The Destour called for a self-governing constitutional regime with a legislative assembly. French attempts to conciliate opinion by administrative reforms, beginning in 1920 with economic councils on which Tunisians were represented, did not satisfy the more radical elements, however, and in the face of further nationalist activity repressive measures were resorted to. Shaikh al-Tha'hibi was exiled in 1923 and in 1925 the Destour movement was broken up. It revived in the years after the Depression but soon split, the old Destour leaders being accused of collaboration with France by younger members eager for political action on a broad front. In 1934, led by Habib Bourguiba, a Tunisian lawyer, these created

the Néo Destour (New Constitution) Farty. The new party imployed methods of widespread political agitation as a sesuit of which Bourguila was excited With the every of the Popular Front in France in direct methods to the political political and the every of the Popular Front in France in direct methods much bad been expected in the way of reforms The Néo-Destour was built up into a powerful againstion in the intense extending into all parts of the country, and its strength was proved in a success ful general strike in 1938. Widespread clashes with the politic followed, martial law was proclaimed, some soo nationalists were arrested and both the Destour and Neo-Destour parties were dissolved.

When the Second World War broke out in the following year Tunisian opinion rallied in Javour of France and when Italy entered the war some 23 000 thians in Tunisa were interned. With the fall of France Tunisa came under Vichy rule and Bizerta, Tunis and other ports were used by Germany and Italy to supply their armies in Libya The country became a theatre of war until the defeat of the Asis forces by the Allies in 1943 brought about the eventual at Monsil, was accused of collaboration with the Asis powers and deposed, he was replaced by his cousin, Minhammad al Amin, who reigned until Tunisis became a republic in 1957.

GROWING AUTONOMY

The virtual restoration of peace-time conditions in 1944 brought a relaxation of political restrictions and the years immediately following saw renewed agitation for political changes French action to repress this obliged Habib Bourguiba to remove himself to Caro in 1945 hut his chief lieutenant, Salah ben Youssef, was able to remain in Tunisia. The French authorities turned their attention to political reforms and by Beylscal decrees in 1945 the Council of Ministers and the Grand Council (an elected body with equal French and Tunisian representation) were reorganized, the authority of the latter being extended These moves did not satisfy the nationalists, however, who in August 1946 at a national congress unequivocally demanded complete independence Later in the year a ministry was formed under Muhammad Kaak which included an increased number of Tunisians (moderate leaders heing appointed, the Destour and Néo-Destour having refused to participate), the French retained overriding control

Bourguba returned to Tunnsia in 1949 In April 1959 Not-Descrip proposals were put forward for the bransfer of sovereignty and executive control to Tunnsun hands, under a responsible government with a Frinze Minister appointed by the bey and an elected National Assembly which would draw up a democratic constitution Local French interests would be protected by representation on municipal connects and Tunnau now the Proposals were me with a reasonable response in France and a new Tunnsun government was formed in August 1950, composed of an equal sumber of Tunnsun and French muniters, with

Muhammad Chemik as Chef Minister and Salah ben Youssef Minister of Justice The object of the new government was stated to he the restoration of Tunisans sovereignty in stages in co operation with France Despite strong opposition to these developments from the European settlers (some no per cent of the population), who opposed all concessions to nationalist demands, further reforms were effected in September 1950 and February 1951, when French advisers to the Tunisans ministers were removed and the Resident General's control over the Council of Ministers was diminished.

Peaceful progress towards autonomy came to a balt, however, with growing settler opposition, procrastination on the part of the French government and consequent alienation of the nationalists Franco Tunisian negotiations in 1951 came to nothing and Tunisian resembinent crupted in strikes and demonstrations early in 1952. In February 1952 Bourguids and other Néo-Destour leaders were arrested on the order of a new Readent General, de Hautecloche, and a wave of violence spread throughout the country, culminathing in the arrest and removal from office of the Chief Minister and the imposition of French military control

A new government was formed under Salaheddune Baccouche, a French inspired scheme of reforms designed to lead to eventual internal autonomy was announced in April, and a temporary essing of tension followed, although the now proscribed Néo Destour took their case to Cairo and the UN General Assembly Against a background of increasing terrorism countered by French repressive action, and in face of opposition from both the Néo Destour and the settlers hithe in the way of reform could be achieved The bey at first refused to sign French reform decrees and when he yielded in December 1952 under the threat of deposition the proposals were promptly repudiated by the Néo-Destour

Terrorist activities continued and a secret settler counter-terrorist organization the "Red Hand", came into prominence The situation, which approached civil war in 1953, with bands of fellagha active in the western highlands and around Bizerta, and terrorism and counter terrorism in the towns, did not improve until July 1954 when the newly-formed Mendes France government in France offered internal autonomy for Tunisia with responsibility only for defence and foreign affairs being retained by France The French proposals were accepted and in August a new Tunisian government headed by Tahar ben Ammar. which contained moderate nationalists but also three Néo-Destour members, was formed Negotiations with the French government began at Carthage in September 1954 and although they had reached deadlock when the Mendes-France government fell in February 1955 they were resumed in March and a final agreement was signed in Paris on June 2nd

The agreement gave internal autonomy to Tunisia while at the same time protecting French interests and preserving the class links with France France retuined responsibility for foreign affairs defence (in clinding the control of frontiers) and internal security

Although it was supported by a majority of the Néo-Destour, the extremist wing, headed by the exiled Salah ben Youssef, and the old Destour and Communist elements, opposed it, as also did the settlers' organizations. An all-Tunisian cabinet was formed in September 1955 by Tahar ben Ammar, with Néo-Destour members holding six of the twelve posts.

Habib Bourguiba had returned from three years' exile in June 1955, to be followed by Salah ben Youssef in September. In October, however, ben Youssef was expelled from the party for opposition to the recent agreement and for "splitting activities". A Néo-Destour party congress at Sfax in November 1955 confirmed the expulsion and re-elected Bourguiba as party president. The congress accepted the agreement but at the same time reaffirmed that it would be satisfied only with independence and demanded the election of a constituent assembly. Clashes between "Bourguibist" and "Youssefist" factions followed and in December a conspiracy to set up a terrorist organization to prevent the implementation of the agreement was discovered. Salah ben Youssef fled to Tripoli in January 1956 and many suspected "Youssefists" were placed in detention. At the same time fellagha activity revived, rebel bands becoming active in the remoter parts of the country and acts of terrorism being committed against both Frenchmen and members of the Néo-Destour.

INDEPENDENCE

Against the background of these events a Tunisian delegation led by Bourguiba began independence negotiations with the French Government in Paris on February 27th, 1956. In a protocol signed on March 20th France formally recognized the independence of Tunisia and its right to exercise responsibility over foreign affairs, security and defence, and to set up a national army. A transitional period was envisaged during which French forces would gradually be withdrawn from Tunisia, including Bizerta.

Elections for a Constituent Assembly, immediately held on March 25th, resulted in all 98 seats being won by candidates of the National Front, all of whom acknowledged allegiance to the Néo-Destour. The elections were boycotted by the "Youssefist" opposition. The ministry of Tahar ben Ammar resigned and Habib Bourguiba became Prime Minister on April 11th, leading a government in which 16 of the 17 ministers belonged to the Néo-Destour.

In the early years of independence Tunisia's relations with France were bedevilled by the question of the evacuation of French forces. A Tunisian demand for their withdrawal was rejected in July 1956 by a French government preoccupied with a deteriorating situation in Algeria. Bourguiba visited Paris in September in an attempt to promote a mediated settlement in Algeria based on French recognition of Algeria's right to independence but hopes of progress in this direction were shattered by the French kidnapping in October of five leading Algerian nationalists on their way from Morocco to Algeria. Tunisia immediately severed diplomatic relations with France, anti-French riots broke out and there were clashes

between French troops and Tunisian demonstrators resulting in deaths on both sides.

Moves were made early in 1957 to strengthen Tunisia's relations with her neighbours. In January a treaty of good-neighbourliness was signed with Libya and proclaimed to be a step towards establishing a "Greater Arab Maghreb", and in March, at the end of a visit by Bourguiba, a twenty-year treaty of friendship was concluded with Morocco.

The bey, Muhammed al-Amin, had for long been the object of criticism from Tunisian nationalist leaders who saw him as having been unwilling to participate actively in the struggle for independence and apt to rely on French support. After independence his remaining powers were whittled away and on July 25th, 1957, the Constituent Assembly decided to abolish the monarchy, proclaim Tunisia a republic and invest Bourguiba with the powers of Head of State.

RELATIONS WITH FRANCE

Although diplomatic relations with France had been resumed in January 1957, differences between the two governments in connection with the Algerian revolt soon worsened. In May France suspended economic aid; Tunisia retaliated by abrogating the customs union with France and concluding trade agreements with Yugoslavia and Switzerland. In the same month French troops in Tunisia attempted to drive back into Algeria several thousand Algerian refugees who had crossed the border. Clashes between French forces and Tunisian national guards followed and Bourguiba called for negotiations for the withdrawal of all French troops to Bizerta. The French government's proposal to withdraw 10,000 out of the 25,000 French troops in Tunisia was cautiously welcomed, but at the same time the French claimed, and in September began to exercise, the right to pursue Algerian rebel bands across the Tunisian frontier. Bourguiba, now President, declared a state of emergency along the border with Algeria on September 9th and relations with France once more neared breaking point.

A further difference arose over the question of arms supplies. A French refusal in May 1957 to supply military equipment to Tunisia led President Bourguiba to look elsewhere. French attempts to prevent Tunisia from obtaining arms from any country other than France proved unsuccessful and in November the United States and Britain announced, to French protests, that they would proceed with deliveries.

During October and November 1957 discussions between President Bourguiba, the King of Morocco and Algerian rebel leaders resulted in an offer by Tunisia and Morocco of their good offices in an attempt to achieve a settlement which would combine sovereignty for Algeria with the safeguarding of French interests. This was accepted by the rebel leaders but rejected by the French government.

The most serious Franco-Tunisian incident of the Algerian war occurred in February 1958 when French aircraft from Algeria attacked the Tunisian border village of Sakhiet Sidi Youssef, the scene of several clashes the previous month, killing 79 people, injuring

130 and destroying many buildings The Tunisan government's reaction was to break off diplomatic government's reaction was to break off diplomatic relations with France, to forbid all French troop movements in Tunisa, to demand the immediate to take the matter before the UN Security Council French troops were blockaded in their barracks and the extra territorial status of Bizerta, from which French warships were banned, was abolished In addition some soo French civilians were expelled from the frontier area and five of the seven French consultats closed.

Britsh and United States mediation was accepted and on April 15th twas agreed that all French troops would be evacuated in accordance with a jointly-agreed timetable and Trunsian sovereignty over Bierta recognized, at the same time the French consulates would be reopened and the cases of the replied French civilians examined. When further clashes between Turnsian and French forces occurring the whole country was proclaimed and Trunsia again took the matter to the Security Council and also requested further arms supplies from the United States and Bhaian.

A new phase in France-Tunisian relations began with the accession to power of General de Gaulle in June 1918 An agreement was concluded on June 17th under which French troops stationed outside Bizerfa were to he withdrawn during the next four months, whis negotiations for a provisional agreement on Bizerfa were to follow Restrictions on French troops were removed and diplomatic relations resumed By October the only French troops remaining in Tunisia were in Bizerfa.

Further elumnation of French interests had meanwhile commenced. In June the French-owned transport services and in August the electricity services of Tuns were nationalized. On November 29th President Burguida amounced proposals for purchasing by 1960 all agricultural land in Tunisia owned by French citizens, for distribution to landless Tunisians.

POLITICAL CONSOLIDATION

With the improvement of relations with France the Tunisian government felt free to consolidate its internal position, by reforming the party structure of the Néo-Destour and by taking court proceedings against members of the former regime and "Youssefist 'opponents Prince Chadly, the eldest son of the ex bey, and the former Prime Ministers, Tahar ben Ammar and Salaheddine Baccouche, were among those tried in the latter part of 1958 on charges which included the misuse of public funds and collaboration with the French authorities, sentences imposed ranged from heavy fines to imprisonment and loss of civic rights Salah ben Youssef (in absentia) and 54 of his supporters were charged with plotting the death of President Bourguiba, smuggling arms from Libya, and aiming to overthrow the government, ben Youssel and several others were sentenced to death and most of the remainder received long prison sentences

This trial reflected a widening breach between Tunisia and the United Arab Republic, from where bin Yousself had been conducting his activities. In October 1058 Tunisia had joined the Arab League, only to withdraw from a meeting of its Council ten days later after accusing the UAR of attempts at domination Diplomatic relations with the UAR were severed the same month on the grounds of Egyptian complicity in the "Yousselfst" attempt to assassinate Fresident Bourguba, and on the eve of ben Yousself's trial the President announced the capture of Egyptian officers who had secretly entered Tunisia to assist subversive elements to overthrow his government.

A further step in the establishment of a presidential system of government was taken with the promingation on june 1st, 1936, of a new constitution for Tunisia, which provided for the election of the President for five years and permitted his re-election for three consecutive terms. The President was empowered to lay down the general policy of the static choose the neithers of the governmental coll symmetric contraction of the provident was empowered to lay down the general policy of the static choose the neithers of the governmental coll symmetric contraction of the symmetric constitution also provided for the election of a National Assembly for hey evers and required the approval of the Assembly for the declaration of war, the conclusion of peace and the ratification of treaties In elections which followed on November 8th President Bourguba was unopposed and all go seats in the Assembly were to the Net Destour, their only opponents being the Communities.

THE BIZERTA CRISIS

Duning 1959 and 1960 Tunisan relations with France gradually improved A trade and tanff agreement was signed on September 3th, 1959, and further agreements on technical co-operation and the transfer of French state property in Tunisa to the Tunisan government were concluded. In October 1959 President Bourguiba announced his support for President do Gaulle's offer of self-determination for Algeria, and Tunisa was subsequently able to act as intermediary between France and the Algerian rebels in moves towards a negotiated settlement A meeting in Paris in February 1951 between Presidents Bourguiba and de Gaulle, at the latter's invitation, was regarded as a significant step forward in relations between the two countries

At the same time the Tunisan claim for the handing-back of the Buzerta base was maintained and the issue came to a head on July 5th, 1961, when President Bourguba made a formal demand for its return and repeated the claim, first put forward in 1959 to Saharia territory in Algeria adjacent to the south-western part of Tunisa. Demonstrations then took place against the continued French occupation of Bizerta and on July 17th President Bourguba referred in the National Assembly to plans to "express our will to restore the Tunisian soil in both north and south".

Fighting between Tunisian and French troops began around the Bizerta base and in the disputed area of the Sahara on July 19th, 1961, diplomatic relations were again severed, and Tunisia called for a meeting of the UN Security Council. The fighting ended on July 22nd with the French in firm control of the base and town of Bizerta, over 800 Tunisians having been killed. In the south a Tunisian attempt to seize the fort of Garat el-Hamel also failed. A subsequent visit to Bizerta by the UN Secretary-General, Mr. Hammarskjöld, in an attempt to promote a settlement, was unsuccessful. A French statement on July 28th said that France wished to continue to use the base whilst a state of international tension persisted but was prepared to negotiate with Tunisia about its use during this period.

The immediate results of the Bizerta crisis were a rapprochement between Tunisia and other Arab states, a cooling of relations with the West and an improvement of relations with the Communist bloc. Diplomatic links were re-established with the U.A.R., a move facilitated by the unexplained murder of Salah ben Youssef in Frankfurt in August. The Tunisian Foreign Minister visited the U.S.S.R., Poland and Czechoslovakia and a technical assistance agreement with the U.S.S.R. was signed. Following censure of France in the UN General Assembly in August, talks on the interim use of the base were commenced and on Scptember 29th the French agreed to evacuate the town of Bizerta and retire to positions held before July 19th.

The final settlement of the Bizcrta dispute occupied the remainder of 1961 and much of 1962, talks being held in both Rome and Paris. The Algerian cease-fire in March 1962 had an immediately beneficial effect on Franco-Tunisian relations and the French base installations at Menzel Bourguiba, near Bizerta, were handed over to Tunisia on June 30th. In March 1963 agreement was reached on the transfer of some 370,000 acres of French-owned agricultural land to the Tunisian government. Other agreements, on trade and finance, were designed to reduce Tunisia's balance of payments deficit with France.

Although Algerian independence had been warmly welcomed by Tunisia the extremist doctrines of the new state conflicted with Tunisian moderation and relations quickly deteriorated. In January 1963 the Tunisian ambassador was recalled from Algiers on the grounds of alleged Algerian complicity in an unsuccessful attempt the previous month on the life of President Bourguiba in which "Youssefists" in Algeria, as well as supporters of the old Destour and army elements, were implicated. Moroccan mediation led to a conference of the Maghreb states in Rabat in February 1963 at which the Tunisians demanded the cessation of "Youssefist" activities in Algeria, and after further negotiations a frontier agreement between Tunisia and Algeria was signed in July. Algerian, and also Egyptian, leaders attended celcbrations in December of the final French evacuation of Bizerta which had taken place two months earlier.

EXPROPRIATION

Despite agreement with France in February 1964 on the provision of loans and credits, it was claimed that the March 1963 agreement on the transfer of French-owned land had placed too great a strain on Tunisian financial resources and had also resulted in over-exploitation of the land held by settlers, who had been given up to five years before relinquishing it. On May 11th the Tunisian National Assembly enacted legislation authorizing the expropriation of all foreignowned lands; this affected the proprietors of some 750,000 acres. The French immediately suspended, then cancelled, all financial aid.

This nationalization of foreign-owned land was also seen as a step towards the development of socialism in the agrarian sector of the economy. The Néo-Destour's commitment to "Tunisian socialism" was emphasized in the change of the party's name to the Partie Socialiste Destourien (PSD) at the time of the presidential and general elections in November 1964, in which President Bourguiba was again elected unopposed and the PSD, the only party to present candidates, filled all 90 seats in the National Assembly. Subsequent cabinet changes included the appointment of the President's son, Habib Bourguiba, Jr., as Foreign Minister.

From 1964 onwards internal political conditions became more settled and the attention of the government was turned to the tasks of economic development. The hold of the PSD on the country was strengthened and President Bourguiba's dominating position was unchallenged. In 1966 the setting-up was announced of a Council of the Republic, consisting of members of the government and of the political bureau of the PSD, to ensure continuing stability, one of its functions being to nominate an interim President in the event of the President's death.

FOREIGN POLICIES

Externally, Tunisia's relations with the world beyond the Arab states and Africa since 1964 have tended to be influenced by the need for foreign aid, most of which has been received from Western countries (particularly from the United States but also from Federal Germany) where the moderation of Tunisian policies has inspired confidence. Towards the Communist world Tunisian gestures have been cautious. Some economic assistance has been obtained from the Soviet Union without Tunisia having shifted her non-aligned stance, and although a visit by Chou En-lai in January 1964 was followed by the establishment of diplomatic relations between Tunisia and the Chinese People's Republic, President Bourguiba nevertheless publicly criticized Chinese policies, including the encouragement of revolution in Africa. On African issues Tunisia has taken a moderate line and inside the Organization of African Unity has exercised a responsible influence. In 1965, in the course of a tour of French-speaking African states, President Bourguiba suggested the formation of a francophone African "Commonwealth"; the idea had a mixed reception, however, and interest soon waned.

Relations with the rest of the Arab world have been President Bourguiba's main foreign preoccupation and here his initiatives have resulted in bitter controversy. In April 1965 he openly criticized Arab League policy on Palestine and advocated a more

flexible approach with direct negotiations with Israel on the UN partition plan of 1948 This provoked severe attacks from the U.A R and other Arab states (excepting Morocco, Libya and Saudi Arabia), and after violent demonstrations in Cairo and Tunis both countries withdrew their ambassadors Tuoisia's refusal at the end of April to follow the example of other Arab League states in breaking off relations with Federal Germany, which had exchanged ambassadors with Israel, increased the rift A conference of Arab heads of state at Casablanca in May at which Tunisia was not represented, categorically rejected President Bourguiba's proposal that Israel should be asked to cede territory to the Palestine refugees in return for recognition by the Arab states, and reaffirmed their determination to bring about the complete overthrow of Israel In an open letter to those ettending, President Bourguiba accused President Nasser of attempting to use the Arab League as an instrument of U.A.R. national policy and of interfering in the affairs of every Arab state Tunisia was not prepared to take part in the debates of the Arab League in the hight of this situation. In October 1966, after accusations by President Bourguiba that the UAR was waging a campaign of insults against Tunisia, the severance of diplomatic relations with the U.A.R was announced In January 1967 Tunisia joined Saudi Arabia in protesting to the UN Secretary General at the use of poison gas by Egyptian aircraft in a bombing attack in the Yemen, where the UAR was virtually in control of the republican regime in the civil war with the royalists, Tunisian recognition of the republican regime was revoked the following month

RECENT DEVELOPMENTS

The six-day war between Israel and the Arab states in June 1967 brought immediate reconciliation in the Arab world despite long standing differences Tunisian troops were dispatched to the front but the Israeli success was so swift and the cease-fire came so soon that they were recalled before they had reached the scene of the fighting Diplomatic relations between Tunisia and the UAR were resumed and Tunisia was represented at the Arab summit meeting in Khartoum in September, which agreed not to recog nize nor to oegotiate with Israel Untrue allegations of United States and British intervention on the side of Israel, made by Egypt and Jordao at the time of the Arab-Israel hostilities resulted in serious rioting m Tunis where the British Embassy was sacked Strict measures were taken by the Tunisian authorities to deal with the moters and a student leader was subsequently sentenced to twenty years impresonment After further disorders in March 1968 when his appeal was heard, 134 students and lecturers were arrested They were tried in September on charges of plotting against the security of the state and attempting to overthrow the government Most of them were given prison sentences, but President Bourguiba later threw out hints of possible elemency

The reconciliation between Tunisia and other Arab countries was short lived. In May 1968, following an

attack on President Bourguiba by the Syrian Prime Minister, who charged him with baving betrayed the Arab struggle in Palestine the Syrian charge d affaires and his staff in Tunis were accused of inciting Tunisian citizens to undertake subversive activities and ordered to leave the country The Arab League, at a meeting in Cairo on 1st September refused to hear a statement from the Tuoisian delegate criticising the Arab attitude over Israel, and particularly that of the U.A R On 26th September the Tunisian Government annouoced its intention of boycotting future meetings of the League The statement reproached the UAR with having sought to dictate to the Arab states and with having followed policies which had led to successive defeats at the hands of the Israehs and excessive dependence on communist countries, Tunisia could not subscribe to the continuation of such policies which would lead only to greater dis asters, but nevertheless affirmed its support for the Palestinian guerrillas whom it would provide with material and moral aid The Tuoisian Government would continue to co-operate bilaterally with all Arab states desiring good relations, including Egypt,

Earlier, there had been an improvement in Tunisia's relations with Algeria and an agreement had been signed in April 1968 on the demarcation of their common frontier There was a subsequent deterioration however, following Algerian criticism of statements made by President Boorguiba during a visit to Canada and the United States in May (on the Arab/ Israel question and on the growth of Soviet naval forces in the Mediterrancan) and because the Tunisian Government granted asylum in June to the former Algerian Chief of Staff, Colonel Zhiri, who stood accused of leading an unsuccessful comp d'état against President Boumedienne in December 1967 (end who subsequently left for Europe) President Bonrguiba did not attend the annual meeting of the Organisation of African Unity which was held in Algers in September A visit to Tunis by the Algerian Foreign Minister in March 1969 however, which was followed by a visit to Algiers by Habib Bourguiba. Jnr , in April, brought about an improved climate for oegotiation on economic matters, especially those arising from the nationalization by each country of properties owned by nationals of the others and on the boundary question

THE FALL OF AHMED BEN SALAH

In September 1969 a cabinet reshufile was annouoced its principal feature was the demotion of
Ahmed Ben Salah, Manster of Finance and Planming
for almost ten years and as such the unchallenged
controller of the economy, still only 43 be had been
generally regarded as the most brilliant member of
the cabinet and a possible successor to the ageing
Presadent He remained Minister of Education until
November, but was then stripped of all office subsequently arrested, he was tried and found guilty on
a variety of charges in May 1970 and was finally
sentenced to ten years' hard labour

Ben Salah was the leading force behind the ruthless drive towards co-operative farming that has been the major feature of Tunisian life in recent years. The programme had aroused massive opposition throughout the areas affected; evidence at the trial also indicated that the existing farms had operated very inefficiently and lost large sums of money, which Ben Salah, as Minister of Finance, had reimbursed from the Treasury. No new co-operatives are being formed, and some land has been returned to the peasants. The unprecedented floods in the autumn of 1969 exacerbated the problems of Tunisia's rural economy.

President Bourguiba was re-elected without opposition in November 1969, but since then has spent much time in France, the U.S.A. and Switzerland receiving medical treatment. In his absence the main point of interest has been the struggle to succeed him. Until November 1970 Bahi Ladgham, the Prime Minister, seemed to be in the strongest position. He was chairman of the Supreme Follow-Up Committee, set up to supervise the implementation of the Cairo agreement between King Hussein and the Palestine liberation organizations. This committee had de-

veloped from the initiatives towards mediation started by President Bourguiba's suggestion in September 1970 for a conference of Arab heads of state to discuss the Jordanian situation. However, Ladgham's success on the committee and the wide publicity he received throughout the Arab world, on top of his running of Tunisia for six months in Bourguiba's absence, apparently lost him favour with the President, who appointed Hedi Nouira interim Prime Minister in October, while Ladgham was in Jordan, and official Premier in November.

Throughout 1970 and 1971 relations with the more radical Arab states and with radical powers outside the area improved. Normal relations were resumed with the U.A.R. and Syria, and Tunisia is to take up again membership of the Arab League. Relations with China, who closed her embassy in Tunis in 1967, are soon to be restored to normality, while North Viet-Nam has indicated a desire to open up diplomatic relations with the Tunisian Government.

K.G.M.

ECONOMIC SURVEY

Tunisia covers an area of 165,450 square kilometres. At the last census in 1966 the population was 4,457,862, and by mid-1969 it was estimated at 4,950,000. The Muslim population grows at a rate of some 2.1 per cent annually, while the rate for the total population is slightly less. Most of the towns, and also the greater part of the rural population are concentrated in the coastal areas. In the centre and the south, the land is infertile semi-desert, the population scattered, the standard of living very low, and the rate of growth of the population even higher than in the north.

The capital and main commercial centre is Tunis (population, including suburbs, about 790,000) which, together with the adjacent La Joulette is also the chief port. There are about 100,000 Europeans in Tunis, mainly French and Italians, although the number of Europeans in the country has decreased rapidly since independence. Other towns of importance are Sfax (66,000), Sousse (56,000), Bizerta (54,000) and Khairouan (40,000). Sfax is the chief town of southern Tunisia, the second port and the centre for the export of phosphates and olive oil. There is a special petroleum port at La Skhovia. Approximately 46 per cent of the active population are employed on the land and it has been estimated that this proportion will fall to 44.7 per cent by 1972, since farming is becoming increasingly mechanized and thus requires less labour while the industrial and service sectors, especially tourism, are developing rapidly. Services employed 12.9 per cent of the active population in 1968, the manufacturing industries 12 per cent and the petrol and extractive industries 16 7 per cent.

Tunisia is not lacking in natural resources; however, until very recently, they have been poorly exploited

and in any case, they are not sufficient or well-balanced. Development is only taking place slowly yet, the population is expanding fast. Agricultural production is the mainstay of the economy, though new avenues are now being explored. Agriculture, however, is subject to fluctuations, which have repercussions on standards of living and foreign trade. Although exports of minerals help to correct the imbalance of foreign trade, the equilibrium of the economy is precarious. The specialization of certain regions in a particular crop, necessary for both productivity and in the interests of adaptation to soil and climate, increases the imbalance even further. Three years of drought as well as very severe floods in September 1969, have caused grave economic damage. Not only were crops and livestock lost but communications were broken. Agriculture uses casual labour, leaving this body of unskilled labourers without employment for a large part of the year.

Mineral resources are large and there is plenty of room for development. Phosphates are the most important mineral, followed by iron ore. The 1969 floods cut the Gafsa-Sfax railway, making phosphate exports impossible for several months and also the iron mines at Djerissa inaccessible. Generally speaking, with the exception of the Djerissa iron mines where the high metal content of the ore and ease of working have favoured exploitation, mining concerns in the past have often been under-equipped and frequently only exploited intermittently. There are substantial undeveloped deposits of iron, lead and zinc. A major hope for the future is oil which was first found in commercial quantities in 1964. Production began in 1966. A natural gas field was discovered at Abder Rahmane in Cap Bon with reserves of 200 million cubic metres, which are sufficient to supply Tunis for 20 years.

Industrial production is responsible for only a small part of national income Industrial development in the past was probably partly bampered by Tunisia's close dependence on the French market Government policy on economic development was originally closely bound up with the idea of political independence Before 1956, Tunisia had a colonial economy-it was heavily dependent on the economy of France On independence, the aim became a balanced national economy and hence the periodic divergencies of policy with the French government in subsequent years The embodiment of the government's economic policies is to be found in the series of development plans (1962-64, 1965-68, and 1969-72) Encouragement is given to both public and private sectors though the private sector has to work within the framework of the plan The country still has a considerable trade deficit (48 million dinars in 1969) yet foreign grants and loans, mainly from the USA, the Federal Republic of Germany, Canada and international agencies have ensured that the total balance of payments is in surplus. The servicing of foreign loans in recent years has required about 25 per cent of the gross receipts from exports and services Though, autonomous development is the ultimate aim Tunisia at present welcomes foreign aid from any source Without it the successful implementation of the plan would be impossible

The Tunnian economy is at a decisive stage in its development Having suffered several set-backs over the last few years, not the least of which was the disasterous flooding in October 1959; there now seems to be a more determined effort to formulate an economic policy which will simulate growth and reduce the trade deficit. Although the economy is basically and dependent, there are signs that some streams is being directed towards new industries and the Arab world have given rise to guarded optimism. Specific measures have already been announced in an attempt to give some direction in the agrealitural sector which employs approximately three quarters of the labour force.

AGRICULTURE

About two thirds of the total area of Tunisia is suitable for farming For agricultural purposes the country is comprised of five different districts—the north with its mountains, having large fertile valleys, the north-east including the Cap Bon, where the soil is especially suitable for the cultivation of oranges, lemons and citrus fruit, the Sabel where the olives grow, the contre with its high tablelands and pastures, and the south with cases and gardens where dates are prolife. Harvests vary considerably in sure, depending prolife. Harvests vary considerably in sure, depending orgunity are so wheat barley mane, out and sorghum, fruit are wheat barley mane, out and conjum, fruit are wheat parleys mane, out and conjume fruit are solved to the confidence of

In good years there is a surplus of cereal for export but in recent years wheat and flour have been imported as a result of bad harvests. In 1968 agricultural output rose generally, in 1969, after a mixed season, the floods caused the sector severe set backs and years of work were undone However, in future years crops should show some improvement store the greater part of the land flooded usually suffers from drought

Under the plans from 1962 onwards agricultural produetion is estimated to rise by 5 5 per cent annually. thus raising the standard of living of the rural population, and under the current 1969-72 plan \$246 million of the proposed \$1,200 million total investment is allocated to agricultural projects. It is hoped that the country will become self-sufficient in foodstuffs and that the expansion in the agricultural sector of the economy will stimulate the development of other sectors, notably industry Considerablo progress has been made towards the diversification of crops, mechanization, more irrigation and an increase in the use of fertilizers The basis of the government's agrarian reform programme lies in the formation of 'agricultural units' These units, each consisting of 500 hectares, will be operated as co-operatives, in order to consolidate small peasant holdings to exploit land expropriated from French farmers or to be acquired eventually from the present owners of large or medium sized farms. A number of these units have already been set up It is usual for each unit of land to be divided up between various crops-hard wheat. soft wheat, olives and almonds as well as livestock and a fallow part Water and electricity are introduced and other communal facilities provided By 1968 1,100 co-operatives had been established, there has since been a pause for consolidation, as both "bottlenecks" and rural opposition were becoming widespread In 1969 it was revealed that the system of co-operatives was often mefficient and nusatisfactory and that they were heavily in deht. This discovery was the prime cause for the downfall and disgrace of Abmed Ben Salah, the Minister of Planning for nine years Subsequently, farmers were given the chance to out out of co-operatives Measures now being taken to improve the situation include increased aid to smaller farms, reduced prices for seeds and fertilizers and easier credit facilities from banks. Aid has also heen extended to the fishing industry Despite the immense problems in agriculture, production has on the whole. continued to rise

In March 1963, an agreement was signed between the French and Tunisian governments on French land expropriated by the Tunisian state. Under the agreement, Tunisia was to purchase 150,000 hectares of land m 1963 and 50 000 hectares in 1964 and the French government was to pay substantial compensation to the former owners Those settlers still in occupation of land were promised full ownership rights for five years. The security of these settlers came to a sudden end when in May 1964, the Tumsian parliament abruptly and unexpectedly passed a bill nationalizing all farm land owned by foreigners. This affected some 400,000 hectares, of which 270,000 hectares were French-owned about 45 000 Italian, and 15 000 Maltese Justified by the government on economic grounds, the general nationalization of foreign-owned land violated the 1963 agreement with France The Tunisians defended

themselves by pointing out that the French overrode agreements concerning the import of Tunisian vegetables and fruit. Compensation has since been paid or is being negotiated.

The following are Tunisia's main agricultural crops:

Wheat. Grown in a belt across the northern part of the country, wheat is the most important cereal crop. In 1963, wheat production reached a record 570,000 tons, but it dropped again by 1965 to 520,000 tons. Harvests in 1966 (459,000 tons) and 1967 (340,000 tons) were, however, poor owing to the drought, but there was an improvement in 1968 (385,000 tons) and 1969 (390,000 tons). In good years, wheat is exported but in bad years like these, imports of wheat become necessary. The government guarantees the price to the grower and, amongst other incentives, pays the transport costs of merchants. Wheat is now sold at world market prices, which are lower than the prices which used to be obtained in the French market.

Barley. The area under barley in 1961 was 428,000 hectares. Production fluctuates according to the rainfall, and in recent years has been only about half the record levels (around 200,000 tons) reached earlier. In 1967 production reached 90,000 tons and rose to 130,000 tons in 1968.

Grapes. Grapes are grown around Tunis and Bizerta. Wine production in the period 1962-65 was about 1,800,000 hectolitres, falling to 1.3 million hectolitres in 1966 and 950,000 hectolitres in 1969. Wine used to represent the second most important export but with the discovery of oil, has dropped to third place. Most of Tunisia's wine used to be sold to France at a price above the world price. Wine was not sold to France between September 1964 and 1965 but sales have since been resumed.

Olives. The size of olive harvests varies considerably, partly due to the two-year flowering cycle of the tree. However, in 1963 output was 89,000 tons and 95,000 tons in 1964, two good years. Subsequent harvests have never been as large. In 1968 the crop amounted to 55,000 tons and in 1969 to only 25,000 tons. Olive oil is an important export earner—in 1969 its export yielded 10 million dinars.

Citrus. Citrus fruit is grown on the north-eastern coast. In 1967 citrus production reached 100,000 tons, dropped to 66,000 tons in 1968, but recovered to 80,000 tons in 1969; a large part of the citrus crop is exported, mostly to France.

Dates. In 1966 and 1967 42,000 tons of dates were grown, but only 39,000 tons in 1968. Exports in 1968 were valued at 600,000 dinars.

Esparto Grass. Production in 1965 was 111,000 tons, of which roughly half was exported. This fell in 1966, and fell further in 1967, to only 66,000 tons, but rose again to 108,000 tons in 1968.

Other Crops. Experimental planting of cotton and sugar beet has been tried. Sugar beet is used by the new sugar refinery near Beja, which has a capacity of 1,850 tons per day. Other crops being tried include bananas, strawberries and pistachio nuts.

Livestock. Livestock in 1965 included 3,767,000 sheep, 592,000 cattle, 86,000 horses, 54,000 mules and 190,000 camels.

Fishing. Fishing employs 13,807 men and over 4,000 boats. The fishing industry is being expanded—the catch rose to 23,000 tons in 1962, nearly double the 1956 figure, but the subsequent rate of expansion has varied. The 1968 catch was 32,562 tons. In October 1962 territorial waters were extended from 3 to 6 miles and fishing limits to 12 miles off shore.

MINERALS

Tunisia has several rich mineral deposits and is one of the world's largest producers of phosphates. Although their quality is not as good as the Moroccan equivalent, phosphates are, nevertheless, one of the country's most important exports. Iron ore is mined in Tunisia; also lead, zinc, potash and salt. Oil was discovered close to the Algerian border in May 1964 and gas has also been found. Some 13,000 persons are employed in the mining industry. The current plan recognizes the present importance of the mining industry to the economy. It encourages the processing of minerals in Tunisia—at present exported in their raw state; this applies particularly to phosphates. The plan also proposes the exploitation of the iron ore deposits at Djebel Ank and further exploration for minerals. Production of phosphates and iron ore is expected to rise, while lead and zinc ores may fall. Considerable expansion in mining production has taken place since 1962, though in 1967 the index for mining production fell to 136 from 152 in 1968 (1963=100). The Office National des Mines is responsible for exploration for fresh mineral deposits, for the reactivation of deposits which have ceased production, for the carrying out of an elaborate modernization programme in mining methods and in the improvement of productivity. A further task is to promote exploration for oil.

Phosphates. Calcium phosphates are mined mainly from six large deposits in central Tunisia. Tunisia is the fourth largest producer in the world. Production rose above 3 million tons for the first time in 1965 and reached 3.2 million tons in 1966. Production fell to 2.8 million tons in 1967 due to world market conditions but rose to 3.7 million tons in 1968. The output of phosphates was badly affected in 1969 by the unprecedented floods, but recovered in 1970 to total 3 million tons. It is planned to raise output to 5 million tons by 1972. Exports in 1969 were valued at 17.38 million dinars and destined mainly to France, Italy, West Germany and India. It is used by the fertilizer industry to produce hyperphosphate, superphosphate and triple superphosphate. Phosphate mining is now concentrated in the hands of a single concern, the Sfax-Gafsa Co., which operates under the overall financial control of the government. The company has announced a wide range of plans of modernization of output and new refining projects, as well as changes in location of mining activities. New mechanical processes are to be introduced in order to speed up the growth of productivity. The Sfax Gafsa Co is in the process of opening two new mines one at M rata to replace the Moulares mine and one at Ste/Barba to succeed the Kalsa Jerda mine. The M rata mine is expected to allow easy working with an annual output of some r million tons—double that of the Moulares The Ste Barba scheme currently under study is expected to cost around r million disars in investment expenditure.

The long term plan now had down by the company includes development of a new depost at Schub also in Southern Tunisia Reserves there are now reported to be over 44 million tons Preliminary work on this new deposit began in December 1970 and capital investment of 14 million dinars is expected creating 1200 new 1905

Iron Ore Tunisa has numerous deposits of rich non phosphorous iron ore the two main deposits are at Djerissa and Douana Production rose from 918 ooc toos in 1965 to 1 000 coo toos in 1965 up 16 feb lack to 950 coo toos in 1965 bets 161 lack to 950 coo toos in 1965 bets 174 million dinars in 1969 mostly to markets in Italy the United King dom and Greece Other deposits may be exploited after the conclusion of studies currently being under

Lead Lead ore is extracted in the northern coastal legion Production figures show a steady decline from 36 000 fons in 1938 to 20 812 tons in 1954. In 1965 pro duction rose to 24,444 tons largely due to expanded production at Dipshi Hallouil Froduction was 28 000 tons in 1967 and 25 000 tons in 1968. In 1969 output rose by 58 per cent to total 38 140 tons. Exports of lead ore and products were valued at 472 000 dinars in 1066.

Zinc ore is mined in the north western corner of Tunisia Production has fluctuated over the past few years and is still at a very low level From 6 oo tons in 1938 production 1000 to over 100 to 1000
Salt Production by Cotusal (Cre Génerale des Salines de Tunisie) amounts to between 300 000 and 320 000 tons annually About go per cent is exported principally to Japan

Mercusy Production in 1961 was 1 0,88 kilograms A new depost was discovered in 1963 in the Djebel Arja region In 1965 production reached 6 000 kilograms of which 5 175 were exported By 1968 production had reached 11 000 kilograms

Petroleum Intensive exploration for petroleum has been carried out since the discovery of oil in neigh bouring Algeria. In May 1964 the subsidiary of the Italian State Hydrocarhons Agency (E.N. I) Jound oil at El Borma in the south near the Algerian border Recoverable reserves are estimated at between 53 and 45 million tons. The field went into production in mid 1966 production reached 630 000 tons in the first six months. In 1967 it rose to 2.2 million tons and to over 3 million tons in 1968 and 3.4 million tons in 1969 (including production from the Douleb field). The Tunissian government has taken a 50 per cent share

in the operating company now that oil has been found The crude oil is taken from El Borma via a newly constructed spur pipeline which links up with the existing pipeline from the oilfields at Zarzatine and Edyelch in Algeria to the terminal at La Skhura on the Gulf of Gabbs Thence the crude oil is exported or taken by tanker to the refinery at Bizerta (capacity one million tons per year). A second refinery is under study at Sfax though as yet local demand is only 700 000 tons animally

The Société de Recherches et à Exploitations des Petroles en Tunisse (SEREPT) in which French interests both public and private have a large share together with Aquitaine Tunisie (a wholly owned subsidiary of the French company SNPA) found a new oilfield at Douleh near Kasserine some 115 kilo metres from La Skhirra A new 6 inch pipeline has been built to the port of La Skhirra Production began in May 1968 and totalled 220 000 tons in that year A small field named Tamesmida on the Algerian border south west of Douleh was joined to the Douleb-la Skhirra pipeline in 1969 and will produce some 30 000 tons per year in order to supply a paper pulp plant at nearby Kasserine Some companies are showing a keen interest in exploration in Tunisia though recent discoveries have been only small Aquitaine with 4 000 square kilometres is the principal exploration permit holder and Sitep with 37 000 square kilometres the second The French company Cie Française des Petroles was awarded in 1958 n permit covering 15 000 square kilometres on and offshore in the Guli of Gahès SEREPT also operates a small gas field in the Cap Bon area which supplies Tunis Production at Cap Bon amounts to nearly 10 million online metres annually. The same company in conjunction with the Societé Nationale des Pétroles d Agustains found gas at Douleb south west of Tunis in 1966. A second gas field has been discovered at Bir Ah ben Khahfa near Sfax hy a group of U S companies The production rate from one well is estimated at 2 7 million cubic metres annually

Prospects for the oil industry appear good A strike has been made near the Alperman border at Shuwaish and production has started on a new field at Tom Sindla with an estimated output of 28 oos tons a year Although most oil is worked by joint Tunisan and French or Italian companies a number of other concerns have recently expressed interest in obtaining exploration permits both for on shore and off shore prospecting

INDUSTRY

Industry is still only on a small scale and consists of the processing of local raw materials minerals wood (two new factories in the Sousse region are under construction) and leather and foods—the last named being the most important. There are 20 major flour mills with a total miling capacity of 380 000 tons. Vegetable oil processing is also important and a camming industry is being developed—already over 20 camming factories process fish of all lands mostly

destined for export. At Beja is a sugar refinery capable of refining 1,850 tons per day, sufficient to cover the country's needs in the near future, though some sugar beet has to be imported. Other factories pasteurise milk and make butter, cheese and yoghourt. Other industries include, amongst other construction materials plants, two cement factories. Production in 1968 was 491,000 tons, which more than covered local requirements (200-300,000 tons per annum) thus permitting some exports. In addition, factories manufacture glass, metal furniture, batteries, paint and varnish, leather and shoes, clothing, various textiles, biscuits, chocolates, etc. There is also a motor vehicle assembly plant and three small metal foundries. The industrial sector, however, is expanding fast. In 1963 a 1 million ton oil refinery came on stream at Bizerta which covers all local needs in petroleum products except aviation spirit. Built at a cost of 100 million francs, it is owned by Société Tuniso-Italienne de Raffinage (STIR), a joint government/ENI (Italian state hydrocarbons agency) company. A cellulose factory and a paper paste plant at Kasserine entered into production in the same year; the plant will use locally grown esparto grass as raw material.

Industrial projects include a \$30 million nitrogenous fertilizer plant at Gabès, a new superphosphates plant at Sfax, a glassworks at Mégrine, a tractor and agricultural equipment assembly plant, an electrical equipment plant and a centre for manufacture of high-precision tools. A steel complex at Menzel-Bourguiba with an initial capacity of 120,000 tons of rod, bar wire and small sections began operations in 1965. It is supplied with iron ore from Tamera and Djerissa. Many of these projects came under the development plans (1962-72). New projects are being undertaken in the south, which has suffered from severe unemployment. A chemical complex is under construction near Gabès. Also under construction are a phosphoric acid plant (capacity 100,000 tons annually), a new thermal power plant, a rail link between Gafsa and new port facilities at Gabès to carry phosphates. A sulphuric acid plant, using local gypsum is planned.

Power. Production of electricity in 1968 was 546 million kWh., most of which was produced by thermal means; hydro-electric power is of lesser importance, having been first produced in 1956. Power production from this source varies considerably, depending on the availability of water. Altogether there are eighteen power stations.

Atomic Energy. Plans have been drawn up for building a nuclear reactor costing 15 million dinars at Gabès. It is expected to produce 20,000 cubic metres of desalinized water and 50 megawatts of electricity per day.

In 1971 the World Bank granted Tunisia a loan of 5.2 million dinars to lay a gas pipe from Al-Burmah to the proposed power station at Gabes. The Bank will grant 3.9 million dinars at an interest rate of 7 per cent while the Kuwaiti Fund for Arab Economic Development will provide the remainder.

FINANCE AND TRADE

Banking. The "Banque Centrale de Tunisie" is the sole bank of issue of the dinar; it performs all the normal central banking functions. Transfers of foreign exchange to all countries have been subject to control since 1959. Fourteen commercial banks operate in Tunisia and a number of financial institutions, some of which specialize in providing finance for investment purposes, the most notable being the Société Nationale d'Investissement. The dinar was devalued in September 1964 by 20 per cent from 0.42 dinars to the U.S. dollar to 0.52 dinars to the dollar. Devaluation was made necessary by the termination of French financial aid after the nationalization of French owned farms. Tunisia did not devalue with the Franc zone in August 1969.

Budget. The current budget usually shows a surplus which is devoted to capital expenditure. Direct taxation accounts for 20 per cent of total revenue and indirect taxes over 50 per cent. Other sources of government revenue are profits of state monopolies, which represent a substantial part of the total, and receipts from state property and forests. Under the 1969 budget expenditure is estimated at 204 million dinars, compared with 185 million dinars in 1968, an increase of 10 per cent. Of this total 70 per cent (140 million dinars) represents ordinary expenditure and the remainder is transferred to the investment budget. Oil is a growing source of government income; in 1966 it contributed 6.7 million dinars to government revenue and in 1969 it rose to 23 million dinars. In 1970 the ordinary budget was balanced at 147 million dinars.

Development. Development expenditure by the public sector for the first plan in 1962-64 was fixed at 140 million dinars, out of a total of 270 million. The 1966 capital budget amounted to 45 million dinars, largely financed by foreign aid but also from ordinary budget surplus (22 per cent) and deficit financing (11 per cent). Expenditure was concentrated on agriculture, infrastructure projects, education, industry and tourism. In the past, a major part of public development has been financed by foreign sources. France used to be the main contributor but her place had been taken by the U.S.A. during the period 1957 to 1963, when the French refused aid to Tunisia because it supported Algeria against the French. In 1964 France again withdrew her aid when the state took over all foreign-owned land. Aid is now being sought from other friendly-disposed countries to replace the French contribution. The United States is contributing \$180 million to Tunisian development. In 1964 alone loans were granted by the U.S.S.R. (\$27.5 million), Italy, Poland and Czechoslovakia (\$19.6 million each), the German Federal Republic (\$7.5 million), IBRD (\$5 million) and others, amounting to \$180 million. The French government is making a loan of £2.8 million and French banks credits of £4.1 million for the phosphoric acid plant. A further French loan is to be utilized for industrial expansion in the south. The World Bank and the Swedish government are loaning \$20 million for the expansion of water supplies in the south.

Development expenditure is made within the context of the 1962 72 development plans which envisage a 6 per cent annual rise in gross domestic product. It is hoped that income per head per year will rise to a minimum of 45 dinars. The general aims of the plans are to modernize the traditional sector to reduce chronic underemployment and to improve social services The first plan covered the years 1962-64 when the main emphasis was on the infrastructure and social services Following the creation of a sound basis for development attention was paid in the second plan (four years 1965-68) to immediately profitable under takings and to exports Industrialization and the modernization of agriculture were the principal features of the second stage. As development under the first stage proved to be too heavy a financial burden a less ambitious pace of development was envisaged for the years up to 1968 In these years investment was estimated to grow by 4 3 per cent per year compared with an II 7 per cent rate of annual growth between 1050 and 1064 It is hoped that exports will grow by 6 per cent annually and imports by only 3 7 per cent as a means to lessen the trade deficit which was one of the earlier problems Difficulties which still confront the planners are the rapid growth in the population and the need for \$100 million per year in foreign aid Bizerta will be the main industrial zone with its port oil refinery and steel complex at Menzel Bourguba and other lesser enterprises The government hopes to establish a new industrial complex in the south where underemployment is severe A new port a fertilizer plant and a power station are planned The Gabes port development is particularly significant. This will represent Tunisia s most important port complex and will in fact comprise three adjacent ports and an industrial estate. These three ports will be specially built to handle general merchandise petroleum and other minerals respectively. Completion is expected to take three years and its cost and that of several secondary projects will be covered by a (10 1 million development credit from Italy The location is ideal for the export of petroleum and phosphates from the southern region and of the agricultural produce of the central region The third four year plan (1969-72) aims at a 6 per cent annual growth rate compared with the 3 5-4 per cent rate achieved during the years 1962-68 Total investment is put at \$1 200 million of which \$246 million is destined for agricultural projects The overall emphasis is on reducing unemploy ment increasing productivity and improving the balance of payments

Foreign Trade Tuussias foreign trade normality shows a deficit of up to 50 million dinars Exports show a rise in most years but are still beavily de pendent on the success of the harvest and world market conditions for mineral exports Exports of crude oil which began in 1966 are now making a substantial contribution to export earnings Exports of St million dinars in 1969 compared with \$2 8 million dinars in 1969 while imports amounted to 1346 million dinars in 1969 compared with 24 million dinars in 1969 compared with 24 million dinars in 1969.

Olive oil used to be the principal export in the past but phosphates took the lead in 1965 and in turn were replaced by crude oil in 1969. Exports of crude oil amounted to 212 million dinars in 1969 while plos plate exports were valued at 17.4 million dinars. If oil oil exports reached a record value of 13.505 million dinars in 1965, but in 1969 only amounted to 10 million dinars. Wine was normally a big export earner in the past but in recent years has made an increasingly smaller contribution. Other exports unclude wheat citrus and other fruit though after a bad harvest such as in 1966 to wheat was exported. Order petroleum was exported for the first time in 1966 amounting to 418 million dinars. In 1967 petroleum exports rose to 10.5 million dinars thus becoming the second largest export.

Imports consist mainly of machinery metal goods and transport equipment. In years of bad harvests in Tunissa large quantities of foodstuffs have to be imported—in 1967 wheat alone amounted to over 12 million dinars. Textiles represented a sizeable import item in the past but have now declined with the increase in home production.

As in the case of Morocco and Algeria a large proportion of Tunisia s trade used to be with France In 1964 France supplied 44 per cent of Tunisia's imports and took 51 per cent of her exports. In earlier years the percentages were even higher and in 1959 France accounted for 66 per cent of total imports. However following the deterioration of relations with France after the nationalization of land owned by foreigners trade with France dropped-exports to France fell drastically from 357 million francs in 1963 to 171 million francs in 1965 (31 per cent of total exports) while imports from France only dropped from soc million francs in 1963 to 467 million francs in 1965 (39 per cent of total imports) The enormous drop in exports to France was caused partly by the closing of the French market to Tunisian wine France refused in 1964 to renew the 1959 trade convention by which France and Tunisia granted each other special privileges in prices and customs duties. Tunisian bard wheat wine citrus fruit and olive oil then bad to face competition on the French market with no advantage However in 1966 the French government announced that it would again grant duty free import quotas for shellfish citrus fruit other fruit and vegetables phosphates and olive oil Relations further improved when agreement was reached on tariff preferences in both countries and it was announced in July that the proceeds of the sale of a million hectolitres of Tunisian wine to France would be credited to a fund for the compensation of French farmers expropriated by the Tunisian government in 1964 France remains Tunisia s principal supplier followed by the USA Italy and West Germany France also continues as the biggest customer for Tunisian exports followed by West Germany and Italy In 1969 the EEC accounted for 55 per cent of Tunisian exports com pared with a corresponding 12 per cent by Eastern European countries and 11 per cent by EFTA

Tourism This has grown rapidly in Tunisia in recent years and became the nation's largest foreign currency earner in 1968. The 1966 figure of 218 000

tourists was only slightly exceeded in 1967 as the Palestine war tended to discourage European visitors to Arab countries; nevertheless the number of "tourist nights" rose by 25 per cent, lifting earnings from 13 million dinars to about 16 million in 1967. In 1968 the number of tourists rose to 330,284, and again in 1969 to 360,000 tourists, earning Tunisia 20 million dinars. The 1969 figure was achieved despite a minor typhoid outbreak and the serious floods at the end of the season. Foreign investment in the tourist industry is also growing steadily.

External Aid. The principal sources of economic aid obtained by Tunisia continued to be Western countries and international institutions, with over 50 per cent of all aid coming from the U.S.—total U.S. aid between 1957 and 1967 amounted to \$528 million. A loan of \$15 million from U.S. A.I.D. funds was agreed in April 1966 for purchases in the United States. In May the International Finance Corporation (IFC) approved a loan of \$5 million for the Tunisian Société Nationale d'Investissement for financing industrial development. Between 1962 and 1967 West German loans for agriculture, irrigation projects and port expansion amounted to over £20 million. In September the International Development Association (IDA) approved credit of \$13 million for educational development, and in December the International Monetary Fund (IMF) agreed to a Tunisian request for a further stand-by credit of \$9.6 million. It was announced in February 1967 that the World Bank and the IDA would jointly provide \$18 million to assist the financing of a co-operative farming project. The IBRD is lending \$10 million to the Société Nationale d'Investissement for new projects in the private sector. In November 1968 a further loan of \$8.5 million from the World Bank was announced for the modernization of Tunisia's ports. In 1967 the Kuwait Fund for Arab Economic Development extended a loan of 13 million dollars to Tunisia for the second stage of the La Goulette II power project. Soviet aid has been given on a limited scale. Following the improvement in relations with France, French aid was stepped up after 1967 and in particular loans of 93 million francs

were promised for the industrial complex at Gabès, while total French aid was nearer double this figure.

Possibly because Tunisia did not follow the Arab countries in breaking off diplomatic relations with West Germany in 1965, relations between the two countries have continued to improve since then. A number of loans have been received from West Germany, the most recent being one of DM 40 million granted in 1970.

After long negotiations, agreement was reached between the European Economic Community and Tunisia under which Tunisia was granted partial association. Full association, which would include aid provisions and the free movement of labour, was thus postponed. Under the partial association agreement, to run for 5 years, the EEC countries will remove all custom duties and quotas on virtually all industrial exports from Tunisia (at present some 55 per cent of Tunisian exports to the EEC). However, there remains a quote of 100,000 tons of petroleum products exported to the EEC without tariff. Custom duties on olive oil and fish are reduced and preference given to hard wheat and various processed agricultural products. Limited preference will be given to citrus fruit. In return Tunisia will give tariff reductions, equivalent to 70 per cent of the preference, previously given to French goods, on 40 per cent of its imports from the EEC. In 1967 Tunisia exported 52 per cent of its total exports to EEC countries, while 48 per cent of imports came from the EEC. In the meantime progress towards economic co-operation between the Maghreb countries is slow, though a permanent Maghreb Consultative Committee and an Industrial Studies Centre have been established. One of the aims is to co-ordinate the four countries' development plans. Co-operation with Libya in the petrochemical industry is expected, following a 1968 agreement under which Tunisia will concentrate on production of superphosphates and phosphoric acid while Libya will devote its efforts to the production of ammonia and its derivatives; joint production of sulphuric acid is envisaged.

BUDGET

Budget Estimates—1967: Balanced at 108 million dinars.

1968: Balanced at 124 million dinars.

1969: Balanced at 132 million dinars.

DEVELOPMENT PLANS 1962-72

Aim at a 6 per cent annual rise in productivity.

FIRST PLAN 1962-64

Proposed expenditure in the Public Sector, 140 million dinars, in the Private Sector: 130 million dinars.

SECOND PLAN 1965-68

Aims at 6.5 per cent annual rise in productivity. National savings will supply 280 million dinars of the planned investments. 150 million dinars will be invested in industrialisation.

THIRD PLAN 1969-72

Proposed investment: \$1,200 million, of which \$246 is allocated to agriculture.

The ratio of boys to girls is approx. 2:1 in primary schools, 3:1 in secondary schools and 4:1 at the University.

THE CONSTITUTION

Turvisia which had been a French Protectorate since 1881 was given full internal autonomy in September 1955 and finally recognized as a fully independent sovereign State by the Protocol of Paris of March 20th, 1956 by which France abrogated the former treaties and conventions

NATIONAL ASSEMBLY

The Constitution was proclaimed by the Constituent Assembly on June 1st 1959 Tunisia is a free independent and sovereign republic Legislative power is exercised by the National Assembly which is elected (at the same time as the President) every five years by direct universal suffrage Every citizen who has had Tunisian nationality for at least five years and who has attained twenty years of age has the vote The National Assembly shall hold two sessions every year each session lasting not more than three months. Additional meetings may be held at the demand of the President or of a majority of the deputies

HEAD OF STATE

The President of the Republic is both Head of State and Head of the Executive He must be not less than forty years of age and is not permitted to serve more than three terms consecutively The President of the Republic is also the Commander in Chief of the army and makes both civil and military appointments

COUNCIL OF STATE

Comprises two judicial bodies (1) an administrative body dealing with legal disputes between individuals and State or public bodies, (2) an audit office to verily the accounts of the State and submit reports

ECONOMIC AND SOCIAL COUNCIL

Deals with economic and social planning and studies projects submitted by the National Assembly Members are grouped in seven categories representing various sections of the community

Note A Republican Council, consisting of leading members of the Government and of the Destour Socialist Party, was established in March 1966 to advise the President and to designate an interim President in the event of a vacancy in the Presidency

EDUCATION

Tunisia is relatively well equipped from an educational point of view. Approximately 60 per cent of children of school age receive an education, and the proportion rises annually. In 1966-67 there were 770,049 children in primary grades, the great majority in state-run schools, private institutions accounting for only about 10,000 and French schools for another 9,000. At the intermediate level in the same year there were approximately 27,000 students in 66 colleges and professional schools. Of these, private establishments and French schools together accounted for 3,500 students. At the secondary level, a wide range of schools and lycées gave instruction to 71,000 pupils.

Arabic only is used in the first two years of primary school, but in the higher grades French becomes progressively more important and is used almost entirely in higher education. About 7,500 Tunisians receive some higher education in the country, and a further 2,000 go abroad for University courses. The University of Tunis was opened in 1961-62, and incorporates as its Faculty of Theology the ancient Es Zitouna University of Islamic studies. The University has five Faculties and a number of attached Institutes. A permanent cité universitaire is under construction on a site near the Belvedere Park in Tunis.

Under the Ministry of Education's Ten-Year Plan, 1959-68, it was intended that educational facilities shall be extended to all children by the completion of the Plan period. This required the provision of 930,000 primary places, 43,000 intermediate, 13,260 secondary and 5,030 higher places. In spite of an initial shortage of teachers and schools the Plan has apparently been very largely fulfilled.

Progress has also been made in other spheres of education: the number of students at the public health schools more than doubled between 1962 and 1965 and agricultural schools recorded over 4,000 pupils in 1965-66, twice as many as three years before. A very successful adult education campaign is also under way and in 1966-67 about 18,000 adults were attending literacy courses. In fact, almost one person in four in Tunisia is attending some sort of school.

Turkey

PHYSICAL AND SOCIAL GEOGRAPHY

Turkey is in a remarkable sense a passage land between Europe and San Nearly one half of her 1 of on miles of land function is with European States—Greece, Bulgaria, and Soyita Russia, and the remainder with Iran, Iraq, and Syria The richest and most densely populated west of Turkey looks towards the Aegean and Mediterranean Seas and is very conscious of its links with Europe whilst in culture racial origins and ways of life there are frequent reminders of Turkey is geographical situation primarily as a part of Max.

Turkey consists essentially of the large pennisula of han Minor, which has strongly defined natural limits sea on three sides (the Black Sea in the north the Aegean in the west and the Mediterranean on the south) and high mountain stages on the Sea of t

PHYSICAL FEATURES

The geological structure of Turkey is extremely complicated and rote of almost all ages occur, from the most suent to most recent. Frould, specing, we may say that Turkey consults of a number of the almost blocks, against which masses of younger rock series have been squeezed forth fold mountain ranges of varying size. As there were several of these plateau blocks, and not just one, the fold mountains run in many different directions, with considerable directions, with considerable directions, with considerable directions, or the considerable direction, and the second of the considerable direction and the second of the considerable directions and the second of the considerable directions and the second of the considerable directions and the second of the considerable directions and the second of the considerable directions and the second of the considerable directions and the second of the considerable directions are second of the considerable directions and the second of the considerable directions are second of the considerable directions and the second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable directions are described as a second of the considerable direction and the considerable directions are described as a second of the considerable direction and the considerable direction and the considerable directions are described as a second of the considerable direction and the considerable direction and the considerable direction and the considerable direction and the conside

In general outline Turkey consists of a rong of mountains conclosing a series of initiated plateaus with the highest mountains on the east close to the USSR and Iran. Mount Ariard, overlooking the Sowet frontier, is the highest peak in Turkey, teaching 16 915 feet, and there are neighbouring peaks almost as larger in the west the average stitude of the hills is distinctly lower, though the impless peak [Diont Frayas or Argears) is over 13 000 4f. The barget [Diont Frayas or Argears) is over 13 000 4f. The large of the control of the peak of

Two other features may be mentioned Large areas of the east, and some parts of the entire of Asis Minor have been covered in sheets of lava which are often of such recent occurrates that so that not tye then formed—consequently some consequently considered that the consequently continued morth angues are sheen and municipalitied. Secondly, in the morth angues are sheen and municipalities of the steep place on an enormous scale. The long, it merced count of the Argean Sea, with its numerous oddly shaped islands and etturaries, is due to cracking in two directions which has split the land into detached blocks of roughly rectancipaler shape often the lower parts have sunk and been downed by the set. The Bosphorus and Dardamelles owe there origin to this faulting action, and the whole of the Black Sea const is due to subsidence along a great series of feasures. Movement and adjustment along these cracks has by no means cassed, so that at the present day earthquakes are frequent in the north and west of Turkey, occasioning at times severe loss of life—most recently in the disaster of March 1990.

Hecause of the presence of mountain ranges close to the cast, and the great height of the interior plateaus (varying from x,500 ft to 7,000 ft) Turkey has special climatic conductors characterised by great extremes of temperature and rainfall with wide variation from one district to another I winter conductors are severe in most karae, except for the many of F can occur in the est, and snow her there is a smay as 120 days cach year. The west has frost on most nights of December and January, and (again apart from the coastal zool), has an average winter temperature below that of the British laies In summer, however, temperatures over most of Turkey exceed 5% or of F, with zeasonal variation of temperature—complete the conductors of the probability the wedst in the world

Rainfall too is remarkably variable. Along the eastern Black Sea coast, towards the Souter frontier, over 100 mobes fall annually (as much as in the vettest parts of the English Lake District, or the Vischern files of Social English Lake District, or the Vischern files of Social Control of the Control of

It is necessary to emphasuse the contrast that exasts between the Aegan coastiands which climaturally are by fat the most favoured regions of Turkey, and the rest of the country Round the Aegan, winters are mid and fairly rainy, and the summers hot, but tempered by a persistent northerly wind the Meltern or Etesian wand which is of great value in ripening fruit especially figs and sultana grapes

ECONOMIC LIFE

The variety of geographical conditions within Turkey has led to microt development and this unevenoes has beenintensified by poor communications due to the broken nature of the topography Roads are relatively few. railways allow and othen roundatout, and whole districts—railways allow and othen roundatout, and whole districts—the relative term of the relative terms of the

Thus we find that the west of Turkey situated close to the Argean Sea is by far the most densely peopled and the most intensively developed Since 1923 however attempts have been made to develop the Anatolian plateau and the districts in the extreme east, which, following the expulsion and massacre of the Armenians in 1914-18, for a time supported only a very scanty population. Development in the central plateau has been aided by the exploitation of several small but on the whole valuable mineral deposits, and by irrigation schemes to improve agriculture. A certain degree of industrialisation (mainly undertaken by state-sponsored and owned organisations) has also grown up, based on Turkish-produced raw materials—cotton, wool, mohair, beet-sugar, olive-oil, and tobacco. The eastern districts present a more intractable problem, and development so far has been slower.

Of recent years, the considerable annual increase of population, now of 3%—one of the highest in the world—has led to intensification of settlement and the bringing in of all available land for cultivation. Henceforth a principal problem for Turkey must be to improve yields from agriculture and industry. Because of the strategic importance of the country, there has been a considerable programme of road-building, largely financed by the U.S.A. and CENTO.

RACE AND LANGUAGE

Racially, the bulk of the Turkish people show an intermixture of Mediterranean and Armenoid strains. In the western half of the country Mediterraneans and Armenoids are more or less equally represented; but further east the proportion of Armenoids steadily increases, until towards the Soviet and Iranian borders, they become almost uni-

versal. We can in addition note less important racial elements: there would seem to be small numbers of proto-Nordics in the north and west, and some authorities suggest a racial relationship between Galatia (the modern district of Ankara) and ancient Gaul. The Ottoman Turks were in the main of Turki (western Mongoloid) ancestry, but in the view of some authorities their contribution to the ethnic stocks of Turkey would seem to have been small, since they were really an invading tribal group that became an aristocracy and soon intermarried with other peoples. There are also numbers of Caucasians—particularly Circassians and Georgians—who have contributed to the racial structure of Turkey; and during 1951 a further element was added by the arrival of many thousands of Bulgarian Muslims who had been deported from their own country.

The Turkish language, which is of central Asiatic origin, is spoken over most, but by no means all of the country. This was introduced into Turkey in Seljuq times, and was written in Arabic characters, but as these are not really well adapted to the sound of Turkish, Roman (i.e. European) script has been compulsory since 1928. As well, there are a number of non-Turkish languages. Kurdish has a wide extension in the south-east, along the Syrian and Iraqi frontiers; and Caucasian dialects, quite different from either Turkish or Kurdish, occur in the north-east. Greek and Armenian were once widespread, but following the deportations of the last forty years both forms of speech are now current only in the city of Istanbul, where considerable numbers of Greeks and Armenians still live.

HISTORY

ANCIENT HISTORY

The most ancient written records so far found in Asia Minor date from the beginning of the second millennium B.C. They are in Assyrian, and reveal the existence of Assyrian trading colonies in Cappadocia. These documents, together with a growing amount of archaeological evidence, show an important Copper Age culture in Central Anatolia in the third and early second millennia. Later in the second millennium the greater part of Asia Minor fell under the rule of the Hittites. This people has long been known from references in the Old Testament and other ancient texts, but its full importance was first revealed by the excavations at Boğazköy, the site of the ancient Hittite capital of Hattushash. The Hittite Empire flourished from about 1600 to about 1200 B.C., and reached its apogee in the fourteenth and thirteenth centuries, when it became one of the dominant States of the Middle East. One of the sources of Hittite strength was iron, which was first worked in Anatolia. The production of iron was for long a monopoly of the Hittite kings, but the use of iron implements eventually spread to other parts, and revolutionised agriculture, industry, and war,

After the break-up of the Hittite Empire, Asia Minor was split up among a number of dynasties and peoples—Phrygians, Cimmerians, Lydians, and others—about whom not very much is known. Towards the end of the Hittite period the Greeks began to invade the Aegean coast, and entered on a long struggle with the native states that is reflected in the story of the Trojan war. Greek culture spread in western Anatolia, which was gradually incorporated into the Hellenic world. A series of political changes, of which the most important are the Persian conquest in 546, the conquest of Alexander in 334, and the constitution of the Roman province of Asia in 133 B.C., did not impede the

steady spread of Greek language and culture in the cities.

In A.D. 330, the Emperor Constantine inaugurated the new city of Constantinople, on the site of the old Greek trading settlement of Byzantium. This city at once became the capital of the East Roman and then of the Christian Byzantine Empire. Asia Minor was now the metropolitan province of a great Empire, and grew in wealth, prosperity and importance. Under Byzantine rule Greek Christianity, already firmly established in Roman times, spread over most of the peninsula.

SELJUQS AND OTTOMANS

At the beginning of the eleventh century a new conquest of Anatolia began—that of the Turks. The early history of the Turkish peoples is still obscure. Some references in the ancient biography of Alexander show them to have been established in Central Asia at the time of his conquests, and Turkish tribal confederacies played an important part in the invasions of Europe from late Roman times onwards. The name "Turk" first appears in historical records in the sixth century A.D., when Chinese annals speak of a powerful empire in Central Asia, founded by a steppe people called Tu-Kiu. It is from this state that the oldest surviving Turkish inscriptions have come. From the seventh century onwards the Central Asian Turks came into ever closer contact with the Islamic peoples of the Near East, from whom they adopted the Islamic faith and the Arabic script, and with them much of the complex civilisation of Islam. From the ninth century Turks entered the service of the Caliphate in increasing numbers, and soon came to provide the bulk of its armies, its generals, and eventually its rulers.

From the tenth century whole tribes of Turks began to migrate into Persia and Iraq, and in the eleventh, under the leadership of the family of Seljuq, the Turks were able to set op a grat empire comprising most of the eastern lands of the Caliphate The Missian armone on the Byzantine frontier had long been predominantly Tarkish and in the course of the eleventh century they began a great movement into Anatolia which resulted in the termination of Byzantine pit in 1840 S. Schmidt A. Schig prince, Sidelynam has to the state of the Schight prince, Sidelynam has Kulimush was sent to organise the new province and by the end of the twelfith century his successors had built up a strong Turkish monatchy in Anatolia, with its capital in Knya (the ancount Iconium) Under the rule of the Anatolian Schight, which in various forms lasted until the four lastes of Turkish immigrants from further east entered the country, and a Turkish, Muslim civilisation replaced Greek Carrisantin immigrants from further east entered the country, and a Turkish, Muslim civilisation replaced Greek Carrisantin.

In the late thirteenth century the Sultanate of Konya fell into decay, and gradually gave way to a number of smaller principalities. One of these, in north western Anatolia, was ruled by a certain Osman, or Othman from whom the name Ottoman is derived. The Ottoman State soon embarked on a great movement of expansion, on the one hand in Anatolia, at the expense of its Turkish neighbours, on the other in the Balkans Ottoman armies first crossed to Europe in the mid fourteenth century, and by 1400 they were masters of much of the Balkan peninsula as well as of almost all Anatolia. The capital was moved first from Bursa to Edirne and then, in 1453 to Constantinople, the final conquest of which from the last Byzantine Emperor completed the process that had transformed a principality of frontier warriors into a new great empire Constantinople, called Istanbul by the Turks, remained the capital of the Ottoman Empire until 1922. The wave of conquest was by no means spent. For more than a century Ottoman arms continued to advance into Central Europe, while in 1516-17 Sultan Selim I destroyed the Mamlul Sultanate and incorporated Syria and Egypt into the Empire During the reign of Sultan Suleyman I (1520-66), called the Magnificent in Europe, the Ottoman Empire was at the height of its power In three continents the Sultan held unchallenged sway over vast territories A skilled and highly organised bureaucracy secured for the peoples of the Empire peace, justice and prosperity, litera-ture, scholarship and the arts flourished and the Ottoman armies and fleets seemed to threaten the very existence of Western Christendom

The decay of the Empire is usually dated from after the death of Suleyman In the West great changes were taking place The Renaissance and the Reformation the rapid development of science and technology, the emergence of strong centralised nation states with constantly improving military techniques, the deflection of the main soutes of international trade from the Mediterranean to the open seas, all combined to strengthen Turkey s Western adver sames while leaving her own resources unchanged or even diminished and helped to relegate her into a hackwater of cultural and economic stagnation. An imposing mulitary façade for a while masked the internal decay that was rot ting the once all powerful Empire, but by the end of the seventeenth century the weakness of the Ottoman State was manifest Then began the struggle of the Powers for pickings of Turkish territory and for positions of influence in the Empire During the eighteenth century it was Austria and Russia that made the main territorial advances in the Balkans and in the Black Sea area, while England and France were content with commercial and diplomatic privileges. In a succession of wars one province after another was lost, while internal conditions went from bad to worse During the nineteenth century England and France began to play a more active role British policy was generally to support the Turks against their impatient heirs In 1854

Betsun and France went to war at the side of Turkey in order to check Rusiana aggression, and in 1877-78 Butsuls diplomate intervention was effective to the same end Meanwhile the ferment of nationalist ideas had spread from the West to the subject peoples of the Empire and one by one the Serbs Greeks, Romanians and Bulgarians sinceceded in throwing off Ottoman rule and attaining independent statchood

More significant for Turkish history were the first stir rings of a new spirit among the Turks themselves The first serious attempts at reform were made during the reign of Selim III (1789-1807), and during the nineteenth century a series of reforming sultans and ministers worked on a programme of reform and modernisation which though it fell short of its avowed objectives nevertheless transformed the face of the Ottoman Empire and began a process of change, the effects of which are still visible In 1878 the reforming movement came to an abrupt end and from that year until 1908 the Empire was subjected to the iron des potism of Abdul Hamid II, who ruthlessly repressed every attempt at liberal thought and reform In 1908 the secret opposition group known as the Young Turks seized power, and in a wave of revolutionary enthusiasm mangurated a constitution, parliamentary government, and a whole series of liberal reforms. Unfortunately the Young Turks had little opportunity to follow up their promising start First internal dissension then foreign wars, combined to turn the Young Turk regime into a military dictatorship In 1911 the Italians anddenly started a war against Turkey which ended with their gaining Libya and the Dodecanese Islands in 1912-13 a Balkan alliance succeeded in wresting from the dying Empire most of its remaining possessions on the continent of Europe Finally, in October 1914, Turkey entered the war on the side of the Central Powers During the reign of Abdul Hamid German influence had been steadily increasing in Turkey, and the process con tinued under the Young Turks. It was certainly belped by the growing friendship between the Western Powers and Russia, which threw the Turks into the arms of the only power that seemed ready to support them against Russian designs German officers reorganised the Turkish Army German business men and technicians extended their hold on the economic resources of the country, and German engineers and financiers hegan the construction of the famous Baghdad railway which was to provide direct rail communication between Germany and the Middle East

The Turkush alliance was of immense minitary value to the Coutral Powers The Turkush armse, still established in Syrus and Palestine were able to offer an immediate and sections threat to the Suer Canal and to the British postnon In Styre When deeped and successful defence of the Lagyer When deeped and successful defence of the Styre When deeped and successful defence of the Register of the Styre of the S

Depute their weakness and exhaustion after two previous wars, the Turks were alle to wage a bitter defensive war against the Allies At last, after two unsuccessful attempts, one on the Dardanelles and the other in Mesopotamia, a new British attack from Egypt and from India succeeded in expelling the Turks from Palestine Syria, and most of trag Defeated on all sides, or to ff from their allies the struggle, and appears in a Turks decided to abandon the struggle, and appears in the Turks decided to almost option to the struggle, and appears and the Turks decided to almost off the struggle, and appears and the Turks for the struggle, and appears the struggle and the Stratish - British forces outpied listanhial and the Stratish - British forces were in control of the Arah countries and in 1919 French, Italian and Entitsh forces occupied strategie positions in

parts of Anatolia itself. In the capital the Young Turk leaders had fled, and a new Government was formed, subservient to the will of the occupying Powers.

For some time the victorious Powers were too busy elsewhere to attend to the affairs of Turkey, and it was not until the San Remo Conference of April 1920 that the first serious attempt was made to settle the Turkish question. Meanwhile the victors were busy quarrelling among themselves. Partly, no doubt, with the idea of forestalling Italian ambitions, the British, French, and American Governments agreed to a Greek proposal for a Greek occupation of Izmir and the surrounding country, and on May 15th, 1919, a Greek Army, under cover of allied warships, landed at Izmir. Second thoughts on the wisdom of this step appeared in the allied camp, and in October 1919 the Inter-Allied Commission in Istanbul condemned it as "unjustifiable" and as "a violation of the terms of the Armistice". The consequences of the invasion for Turkey were momentous. Now it was no longer the non-Turkish subject provinces and the Ottoman superstructure of the Turkish nation that were threatened, but the Turkish homeland itself. Moreover, the Greeks, unlike the Western Allies, showed that they intended to stay, and that they were aiming at nothing less than the incorporation of the territories they occupied into the Greek kingdom. The Turkish reaction to this danger was vigorous and immediate. The Nationalist movement, hitherto limited to a small class of intellectuals, became the mass instrument of Turkish determination to preserve the integrity and independence of the homeland. A new leader appeared to organise their victory.

THE RISE OF ATATURK

Mustafa Kemal, later surnamed Atatürk, was born in Salonica, then an Ottoman city, in 1880. After a promising career as a regular army officer, he achieved his first active command in Libya in 1911, and thereafter fought with distinction in the successive wars in which his country was involved. After his brilliant conduct of the defence of Gallipoli, he fought on various fronts against the Allies, and at the time of the Armistice held a command on the Syrian front. A month later he returned to Istanbul, and at once began to seek ways and means of getting to Anatolia to organise national resistance. At length he was successful, and on May 19th, 1919—four days after the Greek landing in Izmir-he arrived at Samsun, on the Black Sca coast, ostensibly in order to supervise the disbanding of the remaining Turkish forces. Instead he set to work at once on the double task of organising a national movement and raising a national army.

Meanwhile the Allied Powers were at last completing their arrangements for the obsequies of the Sick Man of Europe. After a series of conferences, a treaty was drawn up and signed by the Allied representatives and those of the Sultan's Government at Sèvres, on August 10th, 1920. The Treaty of Sèvres was very harsh—far harsher than that imposed on Germany. The Arab provinces were to be placed under British and French Mandates, to prepare them for eventual independence. In Anatolia, Armenian and Kurdish States were to be set up in the east, the south was to be divided between France and Italy, and a truncated Turkish Sultanate confined to the interior. The Straits were to be demilitarised and placed under Allied administration, with a Turkish Istanbul surrounded by Allied forces. The rest of European Turkey was to be ceded to Greece, while the Izmir district was to be under "Ottoman sovereignty and Greek administration"

This treaty was, however, never implemented. While the Allies were imposing their terms on the Sultan and his government in Istanbul, a new Turkish State was rising in the interior of Anatolia, based on the rejection of the treaty and the principles on which it was founded. On July

23rd, 1919, Mustafa Kemal and his associates convened the first Nationalist Congress in Erzurum, and drew up a national programme. A second Congress was held in September in the same year, and attended by delegates from all over the country. An executive committee, presided over by Mustafa Kemal, was formed, and chose Ankara, then a minor provincial town, as its headquarters. Frequent meetings were held in Ankara, which soon became the effective capital of the Nationalist movement and forces. It was there that they issued the famous National Pact, the declaration that laid down the basic programme of the Kemalist movement, renouncing the Empire and the domination of the non-Turkish provinces, but demanding the total and unconditional independence of all areas inhabited by Turks. This declaration won immediate support, and on January 28th, 1920, was approved even by the legal Ottoman Parliament sitting in Istanbul. The growth of the Nationalist movement in Istanbul alarmed the Allies, and on March 16th British forces entered the Turkish part of the city and arrested and deported many Nationalist leaders. Despite this setback, followed by a new anti-Nationalist campaign on the part of the Sultan and his political and religious advisers, the Kemalists continued to advance. On March 19th, 1920, Mustafa Kemal ordered general elections, and at the end of April a National Assembly of 350 deputies met in Ankara and voted the National Pact. The Sultan and his government were declared deposed, a provisional Constitution promulgated. and a government set up with Mustafa Kemal as President.

There remained the military task of expelling the invaders. The Greco-Turkish war falls into three stages, covering roughly the campaigns of 1920, 1921 and 1922. In the first the Nationalists, hopelessly outmatched in numbers and material, were badly defeated, and the Greeks advanced far into Anatolia. Turkish resistance was, however, strong enough to impress the Allies, who, for the first time, accorded a certain limited recognition to the Nationalist Government and proclaimed their neutrality in the Greco-Turkish war. The second campaign began with Greek successes, but the Turks rallied and defeated the invaders first at Inönü-from which Ismet Pasha, who commanded the Turkish forces there, later took his surname—and then, on August 24th, 1921, in a major battle on the Sakarya River, where the Turkish forces were under the personal command of Mustafa Kemal. This victory considerably strengthened the Nationalists, who were now generally realised to be the effective Government of Turkey. The French and Italians withdrew from the areas of Anatolia assigned to them, and made terms with the new Government. The Soviets, now established on Turkey's eastern frontier, had already done so at the beginning of the year.

A period of waiting and reorganisation followed, during which the morale of the Greek armies was adversely affected by political changes in Greece. In August 1922 the third and final phase of the war of independence began. The Turkish Army drove the Greeks back to the Aegean, and on September 9th reoecupied Izmir. Mustafa Kemal now prepared to cross to Thrace. To do so he had to cross the Straits, still under Allied occupation. The French and Italian contingents withdrew, and, after a menacing pause, the British followed. On October 11th an armistice was signed at Mudanya, whereby the Allied Governments agreed to the restoration of Turkish sovereignty in Eastern Thrace. In November the Sultan's Cabinet resigned, and the Sultan himself went into exile. Turkey once more had only one government, and Istanbul, the ancient seat of Empire, became a provincial city, ruled by a governor appointed from Ankara.

The peace conference opened in November 1922. After many months of argument the treaty was finally signed on July 24th, 1923. It recognised complete and undivided

Turkish sovereignty and the abolition of the last vestiges of foreign privilege. The only reservation related to the demilitarisation of the Straits which were not to be forth field without the consent of the Powers. This consent was given at the Montreaux Conference in 1936.

THE TURKISH REPUBLIC

The multary task was completed and the demands for mulated in the National Pact had been embodied in an international treaty There remained the greater task of rebuilding the ruins of long years of war and revolutionand of remedying those elements of weakness in the Turkish State and society that had brought Turkey to the verge of extinction Mustafa Kemal saw the solution of Turkey's problems in a process of Westernisation—in the integra tion of Turkey on a basis of equality in the modern Western world To do this it was not sufficient to borrow as other reformers had done the outward forms and trappings of Western civilisation. It was necessary to change the very basis of society in Turkey and to suppress ruthlessly if need be the opposition that was bound to come from the entrenched forces of the old order Between 1922 and 1938 the year of his death. Kemal carried through a series of far teaching reforms in Turkey These may be considered under various headings

The first changes were political After the deposition of Salian Vahdedium in November 1922 a brief experiment was made with a purely religious sovereignty and Abdul Majid was proclaimed as Calpib but not Sultan The experiment was not successful Abdul Mend followed his predio coars into seike and on October 19th 1931 Tirkey was of Kenal Atabutik was effectively a dictatorship—though without the violence and oppression normally associated with that word in Europe A single party—the Republican Pepiles Party—formed the main instrument for the en forcement of Government policy The Constitution of Agustian Change and Change a

The next object of attack was the religious herarchy sleady weakened by the removal of the Sultan Caliph In a sens of cities the Ministry of Religious Affairs was absolubed the religious orders disbanded religious property requestrated religious instruction forbidden. With the order beam Certainly the most striking reforms were the abotton of the fex and the Arabic alphabet and their replacement by the hat and the Latin alphabet. But these were probably less important in the long run than the about of the fex and the Arabic alphabet and their shringsim of the old legal system and the introductions of the striking reforms and the introduction of the latin alphabet as a second state of the striking reforms and the introduction of the striking and the constitution and the constitution amended to make Turkey a secolar State.

Not the least of the problems that faced Mustafa Kemal with the connum one. Turkey is naturally a very rich come by both her resources were for the most part undeveloped and what development there was had been in foreign hands to restore the devastation of war replace the departed to the control of the co

State-sponsored industry was probably the only form of development possible at the time without recourse to foreign and The progress achieved stood Turkey in good stead in the critical years that were to follow

The foreign policy of the Republic was for long one of strict non subvenent in foreign disputes and the main tenance of friendly relations with as many Powers as possible In 1932-16 however Turkey co operated loyally in sanctions against Italy and thereafter the growing threat of German and more especially Italians aggression led to closer links with the West In 1038 steps were taken to strengthen economic links between Turkey and Britain A Birtish credit of fife million was granted to Turkey and a number of contracts given to British firms by Turkey

The death of Kemal Atatitk in November 1938 was a great shock to Turkey Perhaps the best testimony to the soludity of his achievement is that his regime was able to survive that shock and the stresses and strains of the war that followed shortly after.

He was succeeded as Pres dent by Ismet Inonii who announced his intention of maintaining and carrying on the work of his predecessor. The new President was soon called upon to guide his country through a very different time As early as May 12th 1939 a joint Anglo-Turkish declaration was assued stating that the British and Turkish Governments in the event of an act of aggression leading to war in the Mediterranean area would co-operate effectively and lend each other all the aid and assistance in their power This prepared the way for the formal Anglo-French Turkosh Treaty of Alliance aigued October 19th 1939 It had been hoped that this Treaty would be comple-mented by a parallel treaty with the U.S.R. but the equivocal attitude of the Soviet Government followed by the Stain Hitler Agreement of August 1939 made this impossible and the Turks proceeded with the Western alliance in the face of clearly expressed Soviet disapproval They protected themselves bowever by Protocol II of the Treaty stipulating that nothing in the Treaty should bind them to any action likely to involve them in war with the USSR.

TURKEY DURING THE SECOND WORLD WAR

The fall of France the bottle attitude of the Soviet Government and the extransion of German power over most of Emope led the Turkish Government to the conclusion that nothing would be gained by provoking an almost certain German conquest While continuing to recognize the Albance therefore they invoked Protocol II as a reason for remaining neutral and in June 1947 when German expansion in the Balanas the through the German common expansion in the Balanas had brought the German expansion in the Balanas had brought the German expansion in the Balanas had brought the German expansion in the Balanas had brought the German expansion in the Balanas had brought the German expansion in the Balanas had brought the German in which between they supulated that Turkey would maintain her treaty chings

The German attack on the U S S R and the consequent entry of that country not the Grand Alliance brought an important change to the situation and the Western Powers moressed their pressure or Turkey to enter the war On increased their pressure or Turkey to enter the war On the Country of th

desire to share it. While stopping short of actual belligerency, however, the Turks, especially after 1942, entered into closer economic and military relations with the West and aided the Allied cause in a number of ways. In August 1944 they broke off diplomatic relations with Germany, and on February 23rd, 1945, declared war on Germany in order to comply with the formalities of entry to the United Nations Conference in San Francisco.

The war years subjected Turkey to severe economic strains. These, and the dangers of armed neutrality in a world at war, resulted in the imposition of martial law, of closer police surveillance, and of a generally more authoritarian form of government. An unfortunate impression was made by the discrimination practised against foreigners and non-Muslim citizens in the assessment and collection of the Capital Levy imposed in 1942 to meet the growing financial strain. This measure, which occasioned much criticism both in Turkey and abroad, was quietly abandoned in 1943. And then, between 1945 and 1950, came a further series of changes, no less remarkable than the great reforms of Atatürk. When the Charter of the United Nations came up for ratification in the Turkish Parliament in 1945, a group of members, led by Celâl Bayar, Adnan Menderes, Fuad Köprülü and Refik Koraltan, tabled a motion suggesting a series of reforms in the law and the Constitution which would effectively ensure inside Turkey those liberties to which the Turkish Government was giving its theoretical approval in the Charter. The motion was rejected by the Government, and its sponsors forced to leave the party. In November 1945, however, under pressure of a by now active and informed public opinion, President Inönü announced the end of the single-party system, and in January 1946 the opposition leaders registered the new Democratic Party. Numerous other parties followed, neluding the National Party (formed July 1948 and reconstituted as the Republic National Party in 1954).

TURKEY UNDER THE DEMOCRATIC PARTY

In July 1946 new elections gave the Democrat opposition 70 out of 416 seats, and there can be little doubt that completely free elections would have given them many more. During the years that followed, the breach in the dictatorship grew ever wider, and a series of changes in both law and practice ensured the growth of democratic liberties. Freedom of the Press and of association were extended, martial law ended, and, on February 15th, 1950, a new electoral law was approved, guaranteeing free and fair elections. In May 1950 a new general election was held, in which the Democrats won an overwhelming victory. Celal Bayar became President, and a new Cabinet was formed. with Adnan Menderes as Prime Minister and Fuad Köprülü as Foreign Minister. The new régime adopted a more liberal economic policy, involving the partial abandonment of Etatisme and the encouragement of private enterprise, both Turkish and foreign. For a while, the stability and progress of the republic seemed to be threatened by the growing activities of groups of religious fanatics, whose programme appeared to require little less than the abrogation of all the reforms achieved by the Turkish revolution. After the attempt on the life of the liberal journalist Ahmet Emin Yalman in November 1952, the government took more vigorous action against what were called the "forces of clericalism and reaction". Many arrests were made, and in the summer of 1953 the National Party, accused of complicity in reactionary plots, was for a time outlawed and legislation was passed prohibiting the exploitation of religion for political purposes. The relations between the two main parties, after a temporary improvement in the face of the common danger of reaction. deteriorated again in the course of 1953-54, though not to such an extent as to imperil national unity. On May 2nd,

1954, in Turkey's third general election since the war, the Democrats won a resounding victory. Over 80 per cent of the electorate voted, and close on 65 per cent of the votes cast went to the Democratic Party. Owing to the cumulative effect of the electoral system, this gave them 504 out of a total of 541 seats in the new Assembly, as against 407 out of 487 in the previous Assembly. Of the remainder, 28 seats went to the Republican People's Party, 5 to the reconstituted Republican National Party, and 2 to Independents.

Encouraged by this overwhelming reaffirmation of popular support, the Government proceeded to adopt a number of measures which were criticised by the opposition as undemocratic. These included new civil service laws giving the Government greatly increased powers of dismissal and compulsory retirement, and an electoral reform restricted coalition candidatures. These laws, following on the new Press law of March 7th, 1954, embittered relations between Government and opposition. A number of prosecutions of opposition journalists followed, and in September the well-known journalist Hüseyin Cahit Yalçin was fined and condemned to imprisonment. This case aroused widespread indignation both at home and abroad, and despite official insistence that Yalçin had been tried and condemned by due process of law, he was amnestied by the President. Charges against some other opposition journalists were also dropped. Some Republican People's Party leaders, notably Nihat Erim, responded to this more conciliatory attitude of the Government, and on April 17th there was a meeting and an exchange of views between the Prime Minister and the Republican leader Ismet Inonü. Others, however, found the concessions of the Government inadequate, and by the summer, relations between Government and opposition had again been strained by new Press prosecutions. The opposition parties, however, remained active. On June 10th, 1955 the Republican Party organ Ulus, which had ceased publication in December 1953, reappeared under the editorship of Hüseyin Cahit Yalçin, and in the same month the National Party held a party congress in Ankara. both opposition parties decided to boycott the provincial eouncil and municipal elections (September and November 1955 respectively), in which therefore the Democrats were opposed only by the very small Peasant Party and by Independents. These were able to score some successes.

In view of the smallness and weakness of the opposition parties, and the immense parliamentary majority of the Democratic Party, it was inevitable that sooner or later splits would appear within it. In October 1955 a serious crisis culminated in the dismissal or resignation from the party of nineteen deputies. These were later joined by some others and formed a new party, the Freedom Party.

Meanwhile, in September 1955, anti-Greek outbreaks occurred in Istanbul and Izmir. Turco-Greek relations had been growing steadily worse because of the Cyprus question, and the riots appeared to have been touched off by a report, later proved false, that Atatürk's house in Salonica had been blown up by a bomb. The riots, which affected other non-Turkish and non-Muslim elements besides the Greeks, did immense damage to property, though injury to persons was very limited. Martial law was at once proclaimed in Istanbul, Izmir and Ankara, several senior officers and officials relieved of their duties, and several cabinet changes made. A new Cabinet, the fourth since the Democrat victory in 1950, was presented to the assembly on December 9th.

These events, and the growing economic difficulties of the country, brought new political tensions, and in the summer of 1956 new amendments to the Press law (June 7th), the law for the protection of the national economy (June 6th) and the law of public assembly (June 27th) again aroused bitter opposition criticism

Conduct between the Government and Opposition was sharpened by the decision taken to advance the date of the general elections by more than eight months to October 27th 1957. The three Opposition parties—Freubleness Freedom and National Parties—Freubleness Freedom and National Parties—Freedom and National Parties—Freubleness Freedom and National Parties—Freedom and National Parties—Freedom and National Parties and Law was changed to make this impossible. They were therefore obliged to present separate lists in each constitution; and so although the combined votes won by Opposition candidates were slightly more than 50 per cent of the total the Democrats again energed throughout though with a diminished majority in a the Republicana 178 and the National and Freedom Fattes 4 seeds.

Mr Menderes announced the new Cabunet—bas fifth on November 26th It contained two new Ministnes Press and Touram, and Reconstruction and Town Planning One of the most significant changes was the appointment of Mr Fain Zorlu as Foreign Minister in place of Mr Ethem Menderes In September 1958 the resignation of two Min uters jed to an extensive reshulfie of the Cabinet

In the new Assembly the themes of debate continued to centre on the enonume condition of the country and what the Opposition countered introde on liberty. A Bill was passed in December 1937 amending the rules of the Assembly and laying down a new scale of penalties for their infraction. At the same time a proposal to channel all newspaper advertisements through a single organisation was interpreted as another device for ensuring Government control over the Press. The editors of the political weekly Asis the managing editor and a writer on the staff of Usis and the managing editor of a writer on the staff of Usis and the managing editor of wifered imprisonment.

At the end of 1999 tha law claumed a votum well known broad—We Ahmet Yalman in he jy year old editor of Vata I His offence—shared with other editors—was to have represted an article strongly critical of the Govern ment which had appeared in an American newspaper Hr Yalman was in Pakiestan when sentence was passed on him and on his return duly went to jast whence he and other journalists emerged after the coup d 4th of May 1956. There is no doubt that its rustung fight with the Press contributed much to the downfall of the Menderes repime. The new regime while not immediately sweeping away the old have secondary newspaper owners and editors to draw up a code of self-control "which was distorted in the assistance of the International Press lastitus."

FOREIGN AFFAIRS 1945-60

Inforegraffairs both the People Farty and the Demoart Governments followed a fum policy of unreserved identification with the West in the cold war. Since May 1943 the United States has extended economic and military and to Turkey on an increasing scale and in 1990 a first and the States has extended economic and military and to Turkey beam as member of the of Turkash troops to Korea where they fought with distinction in August 1993 Turkey became a member of the Council of Europe and early in 1952 acceded to full membership of the Kortia Atlante Treaty Organisation in which she begin to play an increasingly important part Therestive to play an increasingly important part Therestive a role in both Hallian and Mildle Eastern defeaces On February 28th 1953 a treaty of frendship and collabora ton was signed in Ankara with Greece and Vigosfava which prepared the way for a subsequent alhance and on April and 1954 a mutual aid pact was signed in harachi between Turkey and Pakistan with the blessing of the United States

Despate her economic problems and her failure to secure the you mallow U S dolar loan which as had requested from the United States. Durkey resusted the temptation to fail position of against one other states and play the property of against one another. In spite of efforts from both north and south to detach her Turkey remained faithful to the northern tier alliance and on November 21st 22nd 1935 the Turkish Prime Minister attended the finaugural meeting of the council of the Baghdad Pact in which Turkey thereafter played a major role

Daring the Smai-Suez crisis of November 1956 the repre sentatives of the Turkish Government meeting with those of the other three Muslim members of the Bagbdad Pact (frag Iran and Pakistan) welcomed the withdrawal of the Anglo-French forces from Egypt In December the Turkish Foreign Minister declared that the Pact had done much to hmit and circumscribe the threat to peace in the Middle East The President of the United States announced in January 1957 a new programme of economic and military assistance for those countries of the area which were willing to accept it At a further meeting held in Ankara the Muslim states belonging to the Baghdad Pact expressed their approval of this Eisenhower Doctrine The United States in March 1957 made known its decision to join the military committee of the Baghdad Pact Mr Richards special adviser to the President of the United States carried out a tour of the Middle East in March/April 1937 in order to explain the new doctrine and to distribute the funds assumed to its fulfilment At the close of his visit to Ankara in March a joint communiqué was issued to the effect that Turkey would co-operate with the United States against all subversive activities in the Middle East and that financial aid would be forthcoming from Washington for the eco nomic projects previously discussed between the membera of the Baghdad Pact On October 18th 1958 an agreement was signed by the Turkish and Iranian governments for the construction of a room mile pipe-line from the Iranian oilfields to the Turkish Mediterranean seaboard

At the time of the Jordan crais in April 1937 there was a peried of tension when Turksh tropps were held in readness for action near the frontier with Syria The outbreak of civil war in Lebanon in May 1935 and still more the coup & Hati in Iraq of July 14th Rave Turkey fresh cause for anxiety. The events in Iraq took place to Esphald Part but had the individuel members of the Esphald Part but had the individuel members of the Esphald Part but had the individuel from members also put the Part. The staff of the Part Council secretariat and military planning organization were subsequently transferred to Ankara Iraq withdrew formally from the Part Council Secretariat and military planning organization were subsequently transferred to Ankara Iraq withdrew formally from the Part Council Secretaria

Fidelity to NATO and CENTO remained the basis of Turkey's foreign polety through the next two years By the beginning of 1960 Turkey, following the examples of some of her alies decided that such a policy need not be come of her alies decided that such a policy need not be and a policy of the company of the company of the coming policy of the company of the three decided as a not play Before at could take place the Menders régume was overthrown but his successors continued a more flexible policy. Soon after the revolution a cordial letter from Mr Tulcrunkhey to Gen Gürsel received a cordial vas once more emphasized truley's need for active allies

THE CYPRUS QUESTION

Early in 1957 Great Britain had decided to release Archbishop Makarios from detention in the Seychelles islands. The leaders of the Turkish community in Cyprus visited Ankara in April. Their view was that, ultimately, partition alone would provide an adequate solution for the Cyprus problem. The Archbishop had meanwhile rejected all participation of the Cypriot Turks in future negotiations regarding the island. The Turkish Government itself remained firm in its determination not to allow Cyprus to be handed over unreservedly to the Greeks.

British efforts for a solution of the Cyprus problem increased as conditions inside the island deteriorated. The meeting of the Baghdad Pact Council at Ankara in January 1958, which was attended by the U.S. Secretary of State and the British Foreign Minister, was made the occasion for informal talks. The new Governor of Cyprus, Sir Hugh Foot, arrived to take part in these, but while they were in progress there was serious rioting by Turkish Cypriots in Nicosia and Limassol.

In June 1958 the British Government published a new plan for Cyprus, involving the association of the Greek and Turkish communities directly with the government of the island. Initial Turkish reaction was cold, but in the end it was accepted that the plan was workable, and not incompatible with the eventual solution of partition, which the Turkish Government then favoured. Subsequent efforts by the British Prime Minister, Mr. Macmillan, who paid flying visits to Ankara and Athens in August, and by the Secretary-General of NATO, M. Spaak, were devoted to trying to bring Turkey and Greece together with Great Britain and other interested but "neutral" states in a round-table conference on Cyprus.

The winter of 1958-59 saw a period of intense diplomatic activity and exchanges between Athens and Ankara, as a result of which there began in Zürich on February 5th, 1959, bilateral negotiations between the Prime Ministers and Foreign Ministers of Greece and Turkey. Both countries emphasised that the Zürich conference was called on joint Greco-Turkish initiative. On February 11th, the two Prime Ministers initialled an agreement on the basic structure of a new independent Republic of Cyprus, with a Greek Cypriot President and a Turkish Cypriot Vice-President. There were to be ten Ministers in the Cabinet. three of them Turkish, and a House of Representatives, 30 per cent of whom should be Turkish. The possibility of the union of Cyprus with any other state, or of the partition of it into two independent states, was expressly excluded. On February 11th the two Foreign Ministers came to London from Zürich for preliminary discussions with the British Foreign Secretary, and it was then decided to invite Archbishop Makarios and Dr. Fazil Küçük, the leader of the Turkish Cypriots, to a conference in London. On February 18th a conference of Prime Ministers, Foreign Ministers and the two Cypriot leaders opened at Lancaster House, London, and it ended on February 19th with the acceptance by all parties of the new Constitution for Cyprus.

The aeroplane bringing Mr. Adnan Menderes, the Turkish Premier, to London crashed on February 17th, and as a result of the injuries he received, Mr. Menderes was unable to attend the conference at Lancaster House, although he initialled the final agreements in a London hospital where he was convalescing. Fifteen persons, all of Turkish nationality, lost their lives in the air disaster, including the Minister of Press and Broadcasting, Mr. Server Somuncuoğlu, and Mr. Kemal Zeytinoğlu, a Member of Parliament and a former Minister of Public Works.

Prolonged negotiations to implement the London and

Zürich agreement were finally completed in Cyprus on July 1st, 1960. Elections were to be held at the end of the month, and Cyprus became an independent republic on August 16th. Turks filled fifteen out of the fifty seats in the House of Representatives, and a detachment of Turkish troops was stationed in the island.

THE 1960 REVOLUTION

Economic difficulties continued to be one of the main preoccupations of the Turkish Government. The development plans envisaged since 1950 had been carried forward with financial aid from the United States and from such bodies as the International Bank; farm mechanisation, roads, communication facilities, port development and grain-storage projects were among the chief items of the programme. These policies had been accompanied by inflationary pressures, an unfavourable trade balance, decreased imports, a shortage of foreign exchange and, since the agricultural population was in receipt of subsidies from the Government, a higher demand for consumer goods which aggravated the prevalent inflation. Social and economic unease tended to reveal itself in a drift of people from the villages to the towns, the population of centres like Ankara, Istanbul, Izmir, Bursa and Adana being considerably increased during recent years.

The influences which led to the revolution had been long at work. Hostility between the Democrats in power and the People's Party in opposition grew steadily more marked, and was sharpened towards the end of 1959 by suspicions that the Democrats were planning to hold fresh elections in the near future ahead of time. It was feared that these would, if necessary, be rigged to keep the Democrats in power indefinitely.

In May, 1959, political tension between the two main parties had already broken into violence during a political tour of Anatolia conducted by the opposition leader Ismet Inönu. The Government banned all political meetings. Blows were struck in the Grand National Assembly, and the Opposition walked out.

Much the same pattern of events ushered in the final breakdown a year later. At the beginning of April, 1960, Ismet Inönü undertook another political tour of Anatolia. At one point troops were called on to block his progress. Three of the officers involved in this incident took the strong step of resigning. The Opposition tried, but failed, to force a debate in the Assembly. On their side the Democrats set up a commission of enquiry, composed entirely of their own supporters, to investigate "the destructive and illegal activities of the P.R.P." Again the Grand National Assembly was the scene of violence, and all political activity was suspended for three months.

At this point the students took a hand. The universities had for some time been a focus of anti-government feeling, and in consequence had, like the newspapers, found their liberties attacked. On April 28th students in Istanbul demonstrated against the Menderes Government. Troops were called on to fire; five of the demonstrators were killed and 40 injured. Martial law and a curfew were called in Istanbul and Ankara. There were more demonstrations in Istanbul on May 2nd, in Ankara on May 5th and in Izmir on May 15th. On May 21st cadets from the Ankara War College joined students in a protest march.

As administrator of martial law the Turkish Army found itself, contrary to its traditions, involved in politics. A group of officers decided that their intervention must be complete if Turkey was to return to Kemalist principles. In the early hours of May 27th they struck. President Bayar, Mr. Menderes, most Democratic Deputies and a number of officials and senior officers were arrested. The Government was replaced by a Committee of National

Union headed by General Gürsel, a much respected senior officer who had fought with Atatürk at Gallipoli

The coup was immediately successful and almost bloodless though Dr Gedik, former Minister of the Interior, committed suicide after his arrest. The accusation against the Menderes regime was that it had broken the coustitution and was moving towards dictatorship The officers insisted that they were temporary custodians of authority and would hand over to the duly constituted civilians A temporary constitution was quickly agreed, pending the drafting of a final new one During this interval legislative power was vested in the Committee of National Unity, and executive power in a Council of Ministers composed of civilians as well as soldiers On August 25th however, ten of the eighteen Ministers were dismissed, leaving only three civilians in the Government General Gursel was President of Republic, Prime Minister and Minister of Defence The courts were declared independent Commissions were set up to inquire into the alleged misdeeds of the Menderes regime

Although the new regume did not fail to meet political opporation, particularly among the peasants and around Irmu, a stronghold of Mr. Menderes the main problems dieng it were economic The former regime was shown to be beauly in debt in every field. Austenty measures, melading restrictions on credit, had to be put into operation and an economic planning board was set up to work out a long term investment plan with the aid of foreign experts.

THE COMMITTEE OF NATIONAL UNITY

The Committee of National Unity, which originally consisted of 37 members was reduced to 23 on November 13th 1960. The 14 officers dismusted represented a group fed by Colonel Turkes, who had been pressure for the amy to retain its post revolutionary powers and to introduce radical social reforms. They were officially described as 'dangerous elements planning to seize power' and were seat out of harm's way to deplomate posts abroad

This purge completed preparations for a return to obtained demonery continued. A new Assembly, to act as a temporary parliament, was convened at the beginning of January 1967 it contained of the National Luisty Complete Control of the National Luisty Complete Control of the National Luisty Complete Control of the National Luisty Complete Party Predominated and nominated In this the people's Party predominated at the same time party politics were again legalised and a number of new parties current Some of them proved short lived, but one, the Justice Party founded by General Ragin Ginnitypaia, who have considered the Complete Complete Control of the Party founded by General Ragin Ginnitypaia, who also become the Complete Complete Control of the Party founded by Carty, and Calcid Liggal

THE YASSIADA TRIALS

These constitutional developments took place against the background of the trial of the accused members of the Menderes regime. The trial was held on the little island if Yassiada in the Bosphorus, where the accused had been confined after arrest It began on October 14th, 1960 and continued nath Againt 14th 1964, thus becoming one of

the largest and longest political trials in history. By the end the court presided over by Judge Selim Basol, had held 202 sixtings and heard 1,068 witnesses. Some of the early charges seemed trivial and ill prepared By May, however, the main charges, alleging violation of the constitution, had been reached Impressive witnesses were heard on both sides and some of the accused defended themselves with spirit.

In the final session of the court 633 accused appeared in the dock of whom nearly 100 had earlier been liberated but not formally acquitted The prosecutor asked for 228 death sentences including eight for Mr Menderes and four for Mr Bayar Then followed a month's adjournment, and during this interval an attempt was made to close the national ranks On September 5th leaders of the five principal parties signed a joint declaration undertaking to avoid destructive speeches and to preserve national unity during the electoral campaign After a five-day round-table conference, presided over by General Gürsel, they further agreed to reject the "Democrat mentality" and to eschew the coming Yassiada sentences as a subject for public discussion On September 6th leading newspaper editors followed suit The sentence of the court was pronounced on September 15th There were fifteen death sentences twelve of which, including that on Mr Bayar, were commuted to life imprisonment Adnan Menderes, Fatin Zorlu, the former Foreign Minister, and Hasan Polatkan, the former Minister of Finance, were duly hanged

The trial inevitably absorbed the attention of the country, and there were many remunders that sympathy for the former regime and its leaders was far from dead In March General Guirel, who had soffered a slight stroke at the end of November, warned the Opposition parties that the properties of the stroke of the stroke of the stroke of the stroke of the stroke of the stroke of the stroke of the stroke of the stroke of the stroke of the stroke of the referendum on the new constitution. Thus was that the stroke of the referendum on the new constitution. Thus was the stroke of the referendum on the new constitution. Thus was back for the authorities however, appeared in the results of the referendum on the new constitution. Thus was large smootify was taken as an indication of continuing loyalty to the Democrats However, the authorities made no attempt to disguise the significance of the vote, which was completely fires nor did they allow it to deflect them from their declared aim of handing back power to the October.

These figures were a blow to the hopes of the People's Party that they would achieve an overall working majority A coalition became necessary. The elective results were also further evidence of latent support for the Democrats

THE NEW GOVERNMENT

On October 25th, 1951, Parliament opened and the transfer of power from military to civilians was made The revolutionaires lead kept their word and a new speach began. The next day General Görsel, the only candidate, was elected President But forming a government proved a much harder process On November 10th Mr. Ismet 19eno, leader of the People's Party, was asked to form a govern-

ment, and after much hesitation and strong pressure from the Army, the Justice Party agreed to join forces with its rival. A Cabinet was formed with Mr. İnönü as Prime Minister, Mr. Akıf İyidoğan, of the Justice Party, as Deputy Prime Minister, and ten more Ministers from each of the two coalition parties. Mr. Selim Sarper, who had held the same office since the coup d'état, remained Foreign Minister (but resigned in March 1962).

Restlessness in the country and within the Army was not, however, at an end. On February 22nd, 1962, there was an abortive revolt by a group of officers inside the Ankara Garrison. This appeared to be the act of some of those who feared that, with the Justice Party sharing power, the revolution was in danger of surrendering to those it had set out to overthrow. The Government remained, as Mr. İnönü said, exposed to a double firefrom those who thought the Army did too much (i.e. that civil liberties were still circumscribed) and those who thought it did too little (i.e. that it did not crush all signs of counter-revolution). The resignation of Mr. Inonu at the end of May weakened the extremists in the Justice Party, who had wanted to grant an amnesty to former supporters of Mr. Menderes. They were now face to face with the Army, the original movers of the 1960 revolution. and many of them felt it wise to moderate their demands.

By the end of June Mr. İnönü had formed a new coalition government composed of twelve Ministers from the Republican People's Party, six from the New Turkey Party, four from the Republican Peasants' Nation Party, and one Independent Minister.

The new government's programme expressed attachment to the principles of Western democracy and to the NATO alliance. It covered almost every sphere of the national life, including education, taxation, employment, and the problems of a rapidly rising birth-rate and an adverse balance of trade.

The somewhat uneasy political balance persisted against a background of rumours of further army intervention, and at times it seemed that only Mr. Inonu's skill and prestige kept Turkey on her chosen parliamentary course. As it was, the second half of 1962 saw scuffles break out on more than one occasion in the Assembly and Senate. The most controversial legislation concerned an amnesty for those convicted at Yassiada. A Bill was passed in October which cut sentences by four years. This automatically released those serving sentences by four years or less. Those with sentences of up to six and a half years were also given their freedom. On October 18th, 280 prisoners were set free. They were allowed to practise their professions but not to take part in public life. This act of clemency did not prevent the Opposition from pressing for a complete amnesty for all still detained, including Celal Bayar,

The Republican People's Party, like the country as a whole, found itself divided between those who favoured caution and those who insisted that the pace of reform should be faster. At its congress in October three leading members of the party, including its former secretary-general, Mr. Kasim Gülek, were expelled for a year. There were in addition some signs of a growing but largely uninformed interest in socialism. A Socialist Cultural Association, composed of politicians, intellectuals and journalists, was formed in December. But an article on socialism in Cumhuriyet brought its author arrest—a sign that the identification of socialism with communism was still prevalent.

1962 saw the publication of Turkey's long-awaited first Five-Year Plan (see below, *Economic Survey*). Before the Plan was published there had been considerable controversy over how the amount should be raised (about £2,400 million sterling). Four leading members of the

planning organization, who favoured more drastic taxation of landowners and agriculturalists, including the director. Mr. Osman Torun, resigned in September. In January 1963 Mr. Attila Sönmez, director of economic planning, likewise resigned, on the grounds that serious inflation would result if the Plan were carried out as the Government intended A working group set up in July by OECD in Paris was one answer to the problem of outside contributions to the Plan. This reached agreement in June 1963 and formal signature followed on September 12th. The agreement provided for the association of Turkey with the Common Market in two phases. The first, preparatory, phase was to last from five to nine years, and during it the Turkish economy would be prepared for a customs union by aid, amounting to \$175 million, from the Six. Certain staple Turkish exports would, during the period, have privileged entry to Common Market countries. The second, transitional, phase would last twelve years. During it Turkish tariffs would be gradually reduced, leading ultimately to a full customs union. In April 1964 Turkey received a loan from Britain of £3 million.

POLITICAL UNREST

The political climate during 1963 remained unsettled. In February the leading radical of the original Committee of National Unity, Colonel Turkes, who had been in unofficial exile abroad, returned with plans to set up a new political organization. More immediately threatening to the régime were the disturbances which marked the temporary release of the former President, Celal Bayar, from the prison in Kayseri where he had been since his sentence. A convoy of hundreds of cars escorted the 80-year-old politician to Ankara, where he was welcomed on March 24th by large and enthusiastic crowds. The reception appeared as a direct challenge to the revolution and was countered by violent protests, in which students and members of the armed forces participated, denouncing Mr. Bayar and his supposed supporters in the Justice Party. The Ankara offices of the party and its newspaper were attacked. After five days of liberty Mr. Bayar was taken back into custody, first in hospital and then again to his old prison at Kayseri. He was released again in November, 1964, by which time only a handful of those sentenced with him were left in gaol.

In the early hours of May 21st, 1963, Ankara was the scene of yet another abortive coup d'état. The instigator was Colonel Aydemir, who had been responsible for the attempted revolt in February 1962. On this occasion his resort to arms, in which some of the cadets at the Military Academy were involved, was quickly suppressed. One hundred and three men were subsequently put on trial for their part in the insurrection and four of them, including Colonel Aydemir, were sentenced to death. Colonel Aydemir was executed in July, 1964. One result of the attempted coup was the imposition of martial law in Ankara, Istanbul and Izmir. Originally proclaimed for one month, martial law was repeatedly prolonged.

Although the Bayar incident and Aydemir coup produced divisions inside the ranks of the Justice Party, it showed considerable successes at the local elections in November, the first to be held since 1954. These successes were mainly at the expense of the New Turkey Party and the Republican Peasants' Nation Party, Mr. Inonü's two junior partners in the coalition. They resigned from the government, and after General Gümüşpala, the leader of the Justice Party, had tried and failed to form a Ministry the President called again on Mr. İnönü, who on Decembe, 23rd formed a minority government drawn from members of his own Republican Party and some independents. It received a vote of confidence in the Assembly.

The first months of 1964 were overshadowed by an attempt on the life of Mr Indon't neFebruary, and by the strations of Oppus where the fate of the Turkish muontry created that he had 'missed the bus' by failing to internation on the sland with force when the trouble started Thert were several subsequent occasions when a Turkish describ on the sland appeared imminent but it never materialised and in the middle of June Mr Indon's accepted President [Online].

RAPPROCHEMENT WITH U.S.S.R.

This and other diplomatic efforts towards a solution. failed and public opinion grew more irritated, not only with Greece, hut also with Turkey's western allies, in particular America and Britain, who were accused of being linkewarm in their support for Turkey's case. In August this irritation caused a violent explosion in Izmir. when noters wrecked the American and British pavilions at the trade fair Mr Inon't though moving with characteristic caution, gave a warning that the alliance with the west the bass of Turkey's foreign policy since the war, was in danger, To reinforce his warning came several steps designed to improve relations with the USSR. When the Cyprus problem first flared up again it had appeared that the Soviet Government took the side of Greece and the Soviet trade pavilion had also been a orece and the Soviet trade paymon had also been a target for the Imm hooligans But feelers were out in both Moscow and Ankara and at the end of October 1964 Mr Erkm vanted the USSR.—the first Turkish Foreign Minister to make this journey for twenty five years Before leaving he invoked the memory of the early days of friendship between Atatürk and Lenin, and the same precedent was made much of by his hosts, who tactfully did not try to press Turkey into premature neutralism, as they had done in the past On Cyprus, the USSR appeared to have moved closer to the Turkish point of view the communique which ended Mr Erkin's talks speaking favourably of a solution "by peaceful means on the basis of respect for the territorial integrity of Cyprus and for the legal rights of the two national communities"

Mr Erkin's journey was followed up in January, 1965, by the visit to Ankara of a Soviet parliamentary delegation -the first to come for 30 years-led by Mr Nikolai Podgorny, a member of the Praesidium. This visit too was a success, though some deputies made an angry protest when he was invited to address the National Assembly A trade pact between the two countries followed in March, In May, Mr Gromyko, the Soviet Foreign Minister, paid a five-day visit to Turkey, and in August, Mr Urgupin, the Prime Minister, paid a return visit to the USSR Both occasions were the first of their kind for a generation, and produced a good deal of cordiality The Soviet Government promised to supply Turkey with credits worth £71 million for a steel works, an oil refinery, and other industrial enterprises But over Cyprus it was less forthcoming Friendly references to the banned Turkish Communist Party at the Communist Party Congress in Moscow in March 1966 revived old suspicions of Soviet motives

FALL OF MR, INÖNÜ

For all this, Cyprus continued to give the Opposition ammunion with which to harsas the Income government at the Senate elections in june, 1964, the Jinstiee Party was 14 mt of the 51 seats contexted, thus increasing its appropriate that the season of th

place though he was without a seat in Parliament Mr Inono survived more than one parrow vote of confidence, but was finally brought down on February 13th, 1965 by an adverse vote (225 to 197) in the Assembly on the Budget—the first time that the life of a Turkish government had been ended in this way There was some specula-tion whether the Army would allow the Opposition to form a government the previous November General Sunay, Chief of Staff of the Armed Forces, had warned Justice Party Deputies against criticizing the army After a short delay, however, a coalition government was formed, made up from the four parties which had been in Opposition-the Justice Party, the New Turkish Party, the Republican Peasant's Party, and the National Party. An independent senator, Mr Suat Urgupia, who had spent much of his previous career in diplomacy, headed the team as Prime Minister Mr Hasan Işik, recently appointed as Amhassador to Moscow, was brought in as Foreign Minister, thereby indicating that the new government intended to continue pursiting better understanding with Russia. There was a sharp exchange with Greece in April, when most of the remaining Greek citizens in Turkey were expelled in retaliation for restrictions imposed on the Turkish community in Nicosia.

Turkey ansiered a bitter blow when, in December, the General Assembly of the United Nations passed a resolution urings all states to refrain from intervention in Cypris This was seen as directly amed at Turkey's aid for the Turkish minority there The Government in Ankara denounced the resolution as being "against right, law, and international agreements". However, in the early months of 1966 the position improved somewhat Direct conducts between Ankara and there let do months of the conduction

1965 was election year. The emergence of an organized party of the left was perhaps even more remarkable than the trumph of the Justice Party, hears of the Menderes tradition, Contrary to some expectations, the armed forces accepted too thises our welcome manuscript that the scan of the State 12th Party 12th Par

DEMIREL CABINET

Mr Suleyman Demuel formed his cabinet from members of his own party Mr Farth Sukan became Minister of the interior, and Mr Ihaan Çağlayangil Minister for Foreign Affairs Jutudeuring his government to the Assembly, Mr Demuel declared that its most important of the control of the control of the control of the control of social guitaries and measures of social security? Emphasis was to he put on industrialization. "We have to catch up three centures in three decades", he said

In aptie of its working majority the Demirel Government proved hardly more successful than its predecessors in getting things done. The Juviuse Party blamed its poor record of legislation on the obstructionsit sactics of the Opposition. There had been fibhusters, and several ngly secure of wolonce on the floor of the Assembly. However, elections in June 1966 for a third of the seats in the Senate showed that the Justice Party was not boing popularity.

It gained an increased share of the votes and 35 seats, compared with 13 for the People's Party, and one each for four other parties, including the Turkish Workers' Party, which thus became represented in the Senate for the first time.

To some extent this success was attributable to the innate conservatism of the Turkish peasantry, who may have been alarmed by Mr. İnonü's statement that the People's Party was left of centre. This position was not approved by all the party—some thought it went too far, others not far enough. A convention of the party in October showed a victory for the left-wingers. Mr. Bulent Ecevit, 41 years old and a former Minister of Labour, was elected general secretary of the party, with the declared intention of turning it into a party of democratic socialism. Six months later 48 senators and congressmen, led by Mr. Turhan Feyzioğlu, a former Minister, resigned from the party on the grounds that it was falling into a "dangerous leftist adventure". This was denied by Mr. Ecevit and Mr. Inonii, who supported him. They claimed that, on the contrary, their progressive policies took the wind out of other left-wing parties' sails, and so was the best barrier against communism.

In May 1967 a majority of dissidents came together to form the new Reliance Party, which proclaimed its opposition to socialism and its belief in the "spiritual values of the Turkish nation." In June Mr. Ecevit forced a fresh election of the People's Party executive, and by securing the elimination of two left-wing representatives on it he was able to emphasise that his party remained left of centre rather than left wing.

The National Party also found itself in trouble when 8 of its 31 deputies resigned. But the real threat to all parties other than the governing Justice Party was the new electoral law. This, which was finally passed in March 1968 against the protests of a united opposition, did away with the so-called "national remainder system"—a change which threatened the electoral chances of all the smaller parties but was thought to be particularly aimed at the Turkish Workers' Party, which was accused by the Government of using communist tactics. Earlier a battle had been fought over the party's stormy petrel, Çetin Altan. In July 1967 a vote was taken to lift his parliamentary immunity so that he could stand trial on a charge of distributing communist propaganda. This decision was quashed by the constitutional court in August.

At the beginning of February, 1966, President Gürsel, whose health had been deteriorating, was flown to America for medical treatment. There he suffered further strokes, and it was decided that he was no longer competent to fulfill the duties of his office. On March 28th, Senator Cevdet Sunay, the former Chief of Staff, was elected fifth President of the Turkish Republic to replace him. The former President died on September 14th, 1966.

FOREIGN POLICY 1966-1969

Turkey's relations with her allies in 1966 deteriorated. There were various demonstrations against the Americans, culminating in March 1966 in a riot in Adana, during which American buildings were attacked and American cars overturned. This was touched off by rumours that American servicemen, of whom there were large numbers near the town, had made improper advances to Turkish women. But in effect it was the consequence of a long campaign in the press against America's military presence, which reflected a general increase in xenophobia.

Parallel with these manifestations against Turkey's formerly most stalwart ally went an effort by the Demirel Government to make its whole foreign policy more flexible. This flexibility was symbolized by many official visits, given

and received. In May 1967 Mr. Çağlayangil, the Foreign Minister, went to Romania and Bulgaria, and Mr. Rapacki, the Polish Foreign Minister, visited Turkey. In the following spring the Foreign Minister of Egypt, Mahmoud Riad, the Premier of Bulgaria, Mr. Zhivkov, the President of the Yugoslav Executive Council, Mr. Spiljar, and King Hassan of Morocco pressed hard on each other's heels on the road to Ankara. One outcome of the exchanges with Arab leaders was that at the time of the June war with Israel the Turkish Government expressed its sympathy with the Arab cause. But perhaps the state visit which attracted most attention was that of President Sunay to Britain, where he was the guest of Queen Elizabeth—the first Turkish head of state to be so welcomed since Sultan Abdul Aziz exactly 100 years before.

As usual the touchstone of Turkey's foreign relations continued to be Cyprus. In 1967 this perennial problem oscillated between near settlement and near war. The military regime brought to power in Athens by the coup of April 1967 seemed ready to negotiate, and in September a meeting between the two Prime Ministers was held at Alexandropoulos on the Greco-Turkish frontier in Thrace. A communiqué issued on September 10th, however, at the end of the two-day meeting, made it clear that no agreement had been reached. It spoke only of continuing "the exploration of the possibilities of a rapprochement through the appropriate channels".

Later in the year the situation suddenly deteriorated as a result of attacks by Greek Cypriots on the Turkish enclaves on the island on November 15th. Two days later the National Assembly voted by 432 votes to 1 to authorize the Government to send troops to foreign countries—in other words, to fight in Cyprus. There were daily Turkish flights over the island and the prospects of war seemed real. As a result of strong intervention by American and UN go-betweens the worst was avoided. On December 3rd the Greeks undertook to withdraw their troops from the island and the Turks to take the necessary measures to ease tension. By February 1968 the situation had been so far restored that direct efforts to agree on a negotiated settlement for Cyprus were once again under way.

The principal event affecting foreign policy in 1968 was the state visit paid by General de Gaulle in October. The visit aroused considerable popular interest, and was widely seen as an attempt to restore the French language and culture to its former pre-eminence amongst European influences in Turkey. Since the Second World War it has largely been replaced by Anglo-American influences, and English is now the main foreign language taught in Turkey. A new defence agreement with the U.S. was signed in March 1969, which increased and clarified Turkish control over the American bases.

HOME AFFAIRS 1968-70

The basic factors underlying the Turkish political scene came to the surface during recent years. First amongst these factors is the conservatism of a large majority of the Turkish people, principally the peasants; this majority never accepted the necessity of the 1960 revolution, still mourns the execution of Adnan Menderes, and has transferred its support to the ruling Justice Party. Ataturk's reforms were to a considerable extent imposed upon Turkey by his Republican People's Party and the Army; the party is now the principal opposition group in Parliament but has little chance of regaining power by democratic methods, given the traditionalist outlook of the rural electorate. The R.P.P. leadership follows a moderate reformist policy but has recently been overtaken as a radical force by numerous left-wing elements, some within its ranks, some in the Turkish Workers Party and some independent. These clements command substantial support

TURKEY-(HISTORY, ECONOMIC SURVEY)

in the main cities, especially amongst students and youth in general, and have been campaigning for socialism and other far reaching domestic reforms, withdrawal from NATO, and the abolition of the American bases in Turkey, in recent years the main visible result of this campaign has been a sense of anti-American roto's led by extremists. These have now been countered by right wing extremat groups with passionate Muslim and nationalist convictions.

The Turiash democracy, already threatened by this polarisation of political feeling, faced a fresh crisis in May 1969. The Justice Party had introduced a Bill to restore potitical rights to the leaders of its predicessor, the Democratic Party, and the Bill had passed its initial parliamentary stages by large majorities which included most of the K P P members. Yet the Bill was withdrawn after the armed forces had made their opposition to it very clear, thus the implied threat of a military coup d'ent was generally de the categories of the control of the control of the control of the control of the control of the control of the control or of the control of the control of the control of the control or of the control of the control of the control of the control or of the control

FALL OF DEMIREL GOVERNMENT

The 196¢ elections duly granted Mr. Demarel's Justice Party another term in office, however, in February 1970 the government resigned after 4t right wing Justice Party members had Jonath the opposition to vote against the budget A general election was called for June, but cancled after the National Assembly gave a vite of confidence to a sightly changed Demarel musicity Sexteen of the riche were expelled from the Justice Party for a year, riched were expelled from the Justice Party for a year, riched were expelled from the Justice Party for a year, riched with the proposition of the proposition of the and than in a week position to deal with the unrest that subsequently developed the manuly to raing taxation and pince! This unrest led to lisbour and more significantly, student agriation which brought about the imposition of martial law in Istanbul and Isimir during Jane Growing disastifiaction with the government caused the situation to grow steadily worse towards the end of the year, by which time clashes between left wing and right wing consistent of the property of the p

The disturbances continued into 1971, and in March multary leaders presented the Demirel government with an ultimatum stating that it had 'driven the country to anarchy fratricidal strile and social and economic uprest" and demanding the formation of a "strong and credible government", otherwise the armed forces would take over the administration of the state Mr Demirel resigned and new government, with fifteen ministers from outside the National Assembly, was formed under Professor Nihat Erim, promising the restoration of public order and extensive reforms of education finance, laws agriculture and land However, student violence and urban Sperrilla activities increased during April with kidnappings, bank raids and clashes between students and police, and martial law was proclaimed in eleven of the country's 67 provinces for one month (extended by two months in May and July) It failed to prevent further kidnappings and the murder of the Israeli Consul both by the People's Liberation Army However, the disturbances gradually subsided, and in Inne the government announced certain constitutronal amendments simed at a long term settlement of the situation

ECH.

ECONOMIC SURVEY

Turkey is about 000 miles long and some 100 miles wide, covering an area of 20.5,76 at holmeters The 1056 census tecotided a population of 37.400,000, an increase of 2.5 per cent annually since 1960 in mid 1960 the population was estimated at 34,305,000. Two thirds of the population was estimated at 34,305,000. Two thirds of the population when in the 100 miles of the population of more than 50,000, the largest and best known are the former capital of Istanbul (2.9 million), the port of Irms [14 million) on the Aegean Sea, and the capital Ankara [100 million].

The country possesses great natural advantages the land yields good grain and a wide variety of fruit and other Products, it is rich in minerals; and it has a number of natural ports. The climate is varied and, on the whole, disconable, but communications are hindered by the mountain ranges that ring the Anatolian plateau to the mounts and south.

In the Europe of the seventeenth and eighteenth centures Turish manufactures, such as textiles, were m great demand, but the Ottoman Empire failed to keep pace with adstraid development of the West As production cuts were lowered through machine production, Turkish landwork was swept off the market, even in Turkey, and the country returned to agreniture When the republic was founded in 1933, industrial development was undertaken, and textiles, cement and paper were among the first industries to be established. Between 1933 and 1941 the number of industrial establishments increased from 128 to 1,052. During this period the government's policy was one of "Hairsma", aimed theight at the development of heavy industry. Its main instruments were two state "holding" companies, the Ethiank and the Stimerbank, and much was achieved through them in the post war years there was a marked decline in economic might be and the state of the state o

Under the Menderes regime, free enterprise was encouraged and there was a considerable private investment in industrial undertakings. Some government monopolies were returned to private hands, and state economic hader-takings went into partnership with new enterprises formed with both domestic and foreign private capital, At the same time, there was large-scale official investment in public works schemes, notably in expanding electric power production and communications, with the result that the pace of development was greatly increased. The proportion of national income diverted to investment averaged its to 15 per cent between 1990 and 1959.

The Government made great efforts to speed up development and put through a vast industrialisation programme. But the consequences of such rapid development with its high level of investment, were serious. Difficulties first made themselves felt in the autumn of 1952, and a severe economic crisis had arisen by the end of 1955. Capital development outran resources, and large imports of heavy industrial goods and machinery, not offset by a corresponding expansion in exports, produced a series of foreign trade deficits, with a consequent acute shortage of foreign exchange, in spite of considerable financial assistance from the United States. At home this led to strong inflationary pressure and high prices. The situation was aggravated by a succession of indifferent harvests and by low export prices for chromium and copper. Another contribution to Turkey's difficulties was the high prices paid to farmers, resulting in wheat and other agricultural produce being offered at higher than world prices. To this must be added the fact that Turkey has met heavy defence commitments, nearly 40 per cent of recent budgetary expenditure having been devoted to this purpose.

In an endeavour to combat inflation and reduce pressure on the country's slender reserves, the Government introduced a number of restrictive measures in 1955 and 1956. These included tight controls over liquidity, credit and foreign trade and strict profit margins. However, inflation continued and the trade position deteriorated still further so that in 1958 further controls were introduced. The 1958 stabilisation programme was aimed at correcting the external imbalance by restricting imports and fighting inflation. The most important measures were credit restrictions, the reduction of non-essential investment and the effective devaluation of the Turkish lira. However, the Government's heart was not in its policies and they were not fully applied or completely effective. The Revolutionary Government showed more determination, imposed even more stringent controls and in August 1960 devalued the Turkish lira. The exchange rate remained at £T 25.27 to the £ sterling until the devaluation of sterling in November 1967, which brought the rate to £T 21.6 to the £ sterling. A tourist rate of £T 28.8 to the £ sterling (£T 12 to U.S. \$1) was later introduced; both rates were superseded by a new rate of £T 36 to the £ sterling (£T 15 to the U.S. \$1) which was announced in August 1970.

The stabilization programme was continued after 1961 with some success; restrictive measures were gradually being relaxed, though some imports were still limited. Investment policy was then co-ordinated in the Five-Year Plan (1962-67), which called for an annual investment of 18 per cent of gross national product (against an average of under 16 per cent in recent years) to a final total investment of £T 59,646 million. It aimed at an annual increase in the Turkish national income of some 7 per cent a year. A second Five-Year Plan (1968-72) followed, again aiming at a 7 per cent annual rise in the gross national product: total investment in it was set at £T III,500 million, in annual instalments which will rise to £T 29,000 million by the last year of the Plan.

By 1970, it was apparent, however, that the continuing high and largely-unconsolidated investment had given rise to severe problems in the Turkish economy—one indication of which was the above-mentioned devaluation of the Turkish lira. Adding to the difficulties was a modest agricultural harvest with crop yield in many critical areas at or below the 1969 level. In order to remedy this situation, the government introduced a number of internal measures designed to increase exports earnings, particularly in the agricultural sector, to control the expansion of credit and to maintain an orderly supply and demand situation.

AGRICULTURE

Turkey is still predominantly an agricultural country; two-thirds of her people depend on the land for their living. By 1967 the area sown had expanded to 26 million hectares at the expense of pasturage (and live-stock yields) which dropped from 37 million hectares in 1951 to 26.1 million hectares in 1967. The cultivated area has, however, stagnated since 1963. Most of the farms are small and the average size of a family farm is about nine-teen acres. Agricultural resources are varied and rich in quality, and in normal years the country is practically self-sufficient in foodstuffs (except wheat), while tobacco, cotton, and dried fruits are among the principal exports.

During the 1950s large U.S. credits contributed to agricultural development. Agricultural production increased, but as a result of a larger acreage yields, and productivity remained steady. Guaranteed prices for wheat, sugar-beet and tobacco encouraged the cultivation of low-yield crops. The main object of the first Five-Year Plan was to modernize farming methods and to raise yields, to extend the area under irrigation, to provide essential equipment and fertilizers and, above all, to teach modern farming techniques. The second Five-Year Plan emphasizes the extension of these programmes, particularly as regards irrigation and mechanization.

Nine-tenths of the cultivated areas are devoted to cereals, the most important of which, wheat, makes up about half the total grain production. The principal wheat-growing area is the central Anatolian plateau, but the uncertain climate causes wide fluctuations in production. Barley, rye and oats are other important crops grown on the central plateau. Maize is grown along the Black Sea coastal regions, and leguminous crops in the Izmir hinterland. Rice, normally sufficient for domestic needs, is grown in various parts of the country. Since 1966, the wheat crop has fluctuated between 9.5 and 1.5 million tons a year, the higher figure being reached as a result of the record harvest in 1969 which was not challenged by that won in 1970.

Cotton has only recently been taken seriously by Turkey, but its cultivation, mainly in the Izmir region and in the district round Adana, in southern Turkey, has been successful and great hopes are placed in it. Production has risen from under 200,000 tons in 1960 to 435,000 tons in 1968, with the result that cotton has become Turkey's single most profitable agricultural export. In 1970, cotton earned \$173 million, when nearly 350,000 tons were exported.

Turkey produces a particularly fine type of tobacco. The three principal producing regions are the Aegean district, the Black Sea coast, and the Marmara-Thrace region. The bulk of the crop is produced in the Aegean region, where the tobacco is notable for its light golden colour and mild taste. The finest tobacco is grown on the Black Sea coast, around Samsun. Traditionally Turkey's chief export, tobacco accounts for nearly one-quarter of Turkey's forcign trade earnings, although this proportion has been decreasing in recent years. Exports in 1970 were worth \$78.6 million, most of which came from buyers in the United States and East European countries. The size of the crop fluctuates considerably: in 1967 it reached a record level of 183,000 tons, but by 1969 production had fallen off to only 127,000 tons. Provisional figures for 1970 show a slight recovery to about 150,000 tons.

The coastal area of the Aegean, with mild winters and hot, dry summers produce the grape, fig and the olive. The outstanding product, however, is the sultana type of raisin, which is grown also in California and elsewhere. Turkey normally ranks second in the world as a sultana producer, but in good years such as 1961 and 1962, and

1968 (when the crop exceeded 100 000 tons) becomes the targest producer in the world. In 1970 some 70 000 tons of sultanas were exported with a total value of \$21 million.

The Black Sea area notably around the Girssun and Trabzon produces the greatest quantity of hazel nuts (filberts) of any region in the world in 1979—which was again a modest harvest—a total of 64 000 tons of hazel nuts were produced for export with a value of \$87 million. Substantial amounts of walnuts and almonds are also errown

Tea is grown at the eastern end of the Black Sea around Rize and in other areas Production from state tea plantations was more than 51 coo tons in 1970 of 1 hich nearly 18 000 tons went for domestic consumption

Turkey is also an important producer of oilseeds the principal varieties grown being sunflower cotton sessure and lineard Output has expanded considerably reaching nearly one million tons in 1969

Opum is grown in the provinces of Afyon Irangmanya and Malatys and Turkey is one of the seven countries with the right to export opium under the UN Commission on Nazerido Drige, Much opium is, however exported illegally particularly to the US and Iran partly as a result of pressure from these two countries the Turkin Government has initiated a campaign to abolish parting grow with but only a limited number including liquories are cultivated Experiments in coffee-growing are being conducted in southern Turkey

Sheep and cattle are raised on the grazing lands of the Anticlian plateau Stock raising forms an important branch of the economy. The skeep population of about 3, 4000000 in mainly of the Karsman type and is used primarily as a source of meat and milk. The bulk of the clip comprises causes wood suitable only for carpies, blankers and pooree grades of clothing faiting but efforts have been made in recent years to encourage breeding for wool and there are some 200 000 Merino sheep in the Burga region.

The Angora goat produces the fine soft wool known as mohan Turkey is the second largest producer of mohan in the world production averages 9 000 tons per annual

in the world production averages 9 000 tons per annua-Livestock production accounts for around 30 per contof agracultural output and roughly 10 per cent of GNP Interested production is aimed at under the Plans to catefor expected growth in home demand and also in expert markets.

MINERALS

Turkey has a diversity of rich mineral resources and the sea an important item in the country storegin trade. Between 1964, and 1968 mining production rose by some 33 per cent An investment of fle too million is planeed during the second plan with the biggest increases in production expected from copper ore petroleum and non-

Turkey's unneral resources have not been measured securately but investigations are being carried out in parts of the country by the Mineral Research and Exploration Institute of Turkey (MTA) The MTA receipt discovered fresh iron ore deposits and an important concentration of uranium

The mines are mainly controlled by private enterprise experience of and iron one. The more important State maining institutions are controlled by the Ethank, which works through its subsidiance. Eregli Coal Mines. East Commum Hines Turkish Opper Leban Lead Mines and Kecibottu Sulphur Mines. The Maden Kredi Hankan (Klunng Credits Bank) was set up in 1935 to extend credit.

to the industry and a Mining Investment Bank was set up in 1962 to provide funds to increase production and productivity. The Turkish Mining Bank Corporation was set up in 1969 with Treasury support to provide long and inclumit erim credit for private mining development.

Bitumous coal is found at and around Zonguldak on the Black-Sec coast The seams are steeply included much folded and strongly faulted. The coal is generally muned by the longwall system or a variation of it. These muses constitute the Ethanics largest operation and the coal field is the largest in this part of the world including the Baltons Most of the seams are of good coking quality the coke bring used in the steel rulis at nearly Karabuk Production has risen from around 5 000 000 tons in 1962 to nearly 8 000 000 tons in 1970.

Ligate is found in many parts of central and western Anatolia. Seams located in western Turkey are operated by the West Ligan it a lines whose marketable production now exceeds 2 000 000 tons. Their reserves are estimated at some 1 500 million tons. Total ligatine production in 1970 was nearly 9 million tons compared with a production of 85 million tons in 1969. The main mines in addition to those operated by West Ligate Mines are at Soma Deginnast and Turphylick.

Practically all of Turkush iron ore comes from the Divingi muse situated between Sivas and Exarum in the Divingi muse situated between Sivas and Exarum in the Charlest and the single situation of the Charlest iron and Steel Corporation in 1935. The average grade of ore is from 60 to 65 per cent reserves have been just at 38 million tons. Yearly outputs regulated according to the demands of the Karabák Iron and Steel Works some 600 miles distant to which some 2 million tons of refined ore was transported in 1970.

Turkey is one of the world a largest producers of chrome The mineral was first discovered in 1848 near Bursa in the area around Marmara chrome deposits have since been discovered in more than 120 different locations. The richest deposits are in Guleman south eastern Turkey in the vicinity of Iskenderun in the area sround Eskischir north-nest Anatoba and between Fethive and Antalya on the Mediterranean coast. The Gilleman mines producing 25 per cent of the country's total are operated by East Chromium Mines under Etibank Other mines are owned and worked by private enterprise. Little chromium is used domestically and the mineral is the greatest foreign exchange earner among mining exports Production rose to a record figure of 689 000 tons in 1965 but this output was not approached again until 1969 when production was 662 270 tons In 1970 chrome ore production de creased even so some 500 000 tons with a market value of nearly \$13 million was exported

Copper has been mined in Turkey since ancient times Fresent day production conducted entirely by Ethank comes from the Ergain Mines situated at Maiden in Elaziga and the Morgail Copper Mine at Borçka in Coruh province The Latter mines is smaller but is equipped with more thank the control of the Coruh province and the Morgail Copper Mine at Borçka in Coruh province Sansano not the Black Sea coast it will include a 400 000 tax enheavy in which the Indiastrial Development Bank of Turkey and a number of other commercial banks will have the controlling interest. Present annual production of blatter and refined copper is steady at about *o 000 tons* that the Corumany the United Anagona and the Copper of the Corumany the United Anagona and the Copper of the Corumany the United Anagona are thought to be some 700 000 tons on which bass an annual production rate of some 50 000 tons is foresered by the mud 1970s.

Eskişehir in north west Anatolia is the world's centre of meerschaum mining Meerschaum a soft white mineral which hardens on exposure to the sun and looks like ivory, has long been used by Turkish eraftsmen for pipes and eigarette-holders, to which may now be added various items of costume jewellery.

Manganese, magnesite, lead, sulphur, salt, asbestos, autimony, zine and mercury are important mineral resources. Of these, manganese ranks first in importance. Deposits, worked by private enterprise, are found in many parts of the country, but principally near Eskişchir and in the Ereğli district. Lead is mined at Keban, west of Elaziğ, test production having started in 1953; production fluctuates considerably and in 1968 reached nearly 10,000 tons of ore concentrate. Production of sulphur from the Keciborlu mine in Isparta province was over 25,000 tons in 1970. Autimony is mined in small quantities near Balikesir and Niğde.

The exploration of the Uludağ (Bursa) wolfram deposits, begun in 1951, was completed in 1954. The presence was calculated of 10,000 tons of tungsten ore, carrying an average grade of 0.43 per cent WO₃. These reserves are among the richest in the world. Etibank and the German firm of Krupp have entered into an agreement for the joint exploitation of the deposits.

Turkey's bauxite deposits are about to be developed for the first time. An aluminium complex is being built at Kayseri with Soviet help. The plant will produce 200,000 tons annually of alumina and 60,000 tons of aluminium. Studies are being undertaken concerning the possible exploitation of lead, zine and pyrites deposits.

Petroleum. Oil was first struck in Turkey in 1950 and all subsequent strikes have been in the same area in the southeast of the country. Production rose from 2,401,000 tons in 1966 to 3,600,000 in 1969; it now meets about half of total Turkish requirements. Four companies produce oil: (1) the Turkish Petroleum Corporation (TPAO), a 51 per cent state-spousored Turkish company, at Garzan and Ramandağ, with recently discovered deposits at Mağrip, Batıranıan and Kurtalan and the smaller fields at Kurtalan and Çelikli; (2) Mobil at Bulgurdağ, Silivauka and Selmo; (3) Shell at Kayaköy, Kurkan, Beykan and Sahaban; and (4) Ersan, a small private Turkish company, at Kalıta. Recent discoveries are reported by the Turkish Government to have raised the country's reserves to some 500 million tons.

The largest oil refinery in Turkey, at Mersin, came on stream in June 1962. Built at a cost of \$50 million, it was eapable of processing 3,200,000 tons of erude oil a year, now raised to 4,700,000 tons. It is operated by the Anatolian Refinery Company (ATAŞ), a Turkish-registered company owned by Mobil, Shell and BP. Fifteen per cent of the erude oil processed comes from the Mobil field at Bulgurdağ and the Shell field at Karaköy; the remainder is imported from Iraq and Libya. The one million ton refinery at Izmit owned by Caltex and the Turkish Petroleum Corporation came on stream in 1961. The eapacity of this refinery has been raised to 2.2 million tons per annum and is now being expanded to 5.5 million tons per annum. The TPAO operates a 660,000 tons per annum refinery at Batman, near Diyarbakar, connected by pipeline to both Garzan and Ramandağ. Its capacity is being expanded to 800,000 tons per annum. A Soviet loan is being made for a fourth refinery, which is being built at Izmir with a 3 million ton per annum capacity and is due for completion in 1971. At present, two further refineries are planned, at Thrace, and at a site on the Black Sea.

A 310-mile 18-inch diameter pipeline has been built for TPAO and came into operation in January 1967. It runs from the oilfields around Batman to Dörtyol on the Gulf of Iskenderun. Capacity is 70,000 bbl./day but throughput is only expected to reach about 50,000 bbl./day. Other companies use the pipeline on a tariff basis.

INDUSTRY

Since 1950 there has been a change in the republic's policy of relying on state enterprise to build up industry, and private enterprise has been enrolled in the expansion of industrial undertakings and the creation of new ones. As a result, the private sector now accounts for about 70 per cent of Turkey's industry: its rate of capital investments, in spite of government domination of the heavy industry sector, has been maintained at about 46 per cent. No attempt, however, has been made to denationalize the large state concerns; instead the government is being encouraged to reorganize them in order to increase productivity. An important aspect of this process is decentralization, in order to better define the administrative roles of the government-owned Sümer and Eti Banks and the Machine and Chemical Industries Association.

The iron and steel works at Karabük, north-west Anatolia, formerly owned and controlled by the Sümerbauk, are run by an independent enterprise, the Turkish Iron and Steel Corporation (Turkiye Demir ve Çelik İşletmeleri), which has taken over the whole of the iron and steel industry. Capacity is 325,000 tons, which could be raised eventually to 600,000 tons.

The first stage of a second iron and steel complex at Ereğli in west Anatolia was completed in 1965, with an initial annual capacity of 500,000 tons, to be raised eventually to 1,500,000 tons. Built at a cost of \$280 million with the help of large U.S. loans, it produces hot and cold rolled sheets, steel strip and tinplate, and employs 2,600 men. It is expected to cover Turkey's needs and allow some exports. An Istanbul company plans to set up a third, but smaller plant at Edremit on the Sea of Marmara, in conjunction with an Italian company. A U.S. credit of \$22.3 million will help finance extensions to the Ereğli steelworks. A 1 million ton per annum steelworks at Iskenderun is to be built with the aid of Soviet credits.

Adana and Kayseri are the chief centres of cotton textile manufacturing, the Sümerbank's factory at Kayseri being the largest textile plant in the Middle East. Cotton is an important export, but increasingly larger quantities are being consumed by the rapidly growing textile industry and the remaining hand looms.

At present, Turkey produces approximately 80 per cent of her requirements of woollen cloth. The industry is located eliiefly in Istanbul and İzmir.

The Bursa region is famous for its silk industry and there are linen factories at Ereğli and Malatya.

There are over two dozen cement factories in Turkey: more are under construction or planned. Their combined production in 1970 was 6,373,215 tons, considerably more than double production in 1961 but still barely enough for domestic consumption.

Among food industries, the state-controlled sugar-beet industry is the most important. The first refinery began operations in 1926; three more were built by 1950 and more than a dozen since. Beet sugar production in 1970 totalled 668,827 tons, less than in 1968 but adequate for domestic demand and with a small surplus for export.

Turkey has three paper mills, one wood- and two strawand rag-pulp mills. Three new plants have recently been completed. Production of paper was 109,000 tons in 1967. There are two fertilizer plants, at Iskenderun and Kutahya. A fertilizer plant is being built to use by-products from the Mersin oil refinery as well as plants at Samsun and Elazig. Other manufacturing industries include ceramics, glassware, lorry and tractor manufacturing, leather goods, pharmaceutical, rubber and plastic products. In 1962 a letro-chrome factory opened, two tyre factories began operations in 1965. First and Renault are building car factories. The first stage of a state-owned petro-chemical complex at Irant produces ethilene polythene PVC chlorine and caustic soda Expansion is plasmed into the manifacture of other products In addition there are the state monopolics which have exclusive right to the manifacture of tobacco wines, spirits, liqueurs. sait and tea

Power, There has been an extensive development of electrical energy, electrical production doubled between 1990 and 1955 and 13 now nearly 9,000 million kWh 8 year Hydroelectric power has already shared in the expansion in 1950 it represented a per cent of total power and that the shared and the second of the shared and

More important than any of these honever will be Turkey's most ambitions power project, the Emphrates dam at Keban on which work started early in 1966 The fort, high dam will hold back a lake yo mide long at the confinence of the two main branches of the Emphrates The plant will bave an intuit capacity of 500,000 kW, insight of 1240,000 kW, by 1972 The power generated will go firstly through a 60-onale gard system to the undawties of the north western part of the country, but it is not seen to be sufficiently through a cost of the country, but it is not seen to be sufficiently through a cost of the country, but it is not seen to be sufficiently through a cost of the country, but it is not seen to be sufficiently through the seen part of the country, but it is not seen to be sufficiently through the seen part of the country, but it is not seen to be sufficiently through the seen to be sufficiently through the seen that the seen

FINANCE AND TRADE

finning and Gurrency. The Central Bank (Merkez Bankan) the sole bank of issue, started its operations of October 3rd, 1931 It controls exchange operations and ensures the monetary requirements of certain state enter pries by the discounting of bonds assued by these establishments and guaranteed by the Treasure.

There are 51 other banks, thurteen are state-controlled and operate under special legislation to promote govern mental industrial agricultural and other plans. The largest of these are the Aprocultural Bank (Linard Banks), the control of the control of the property of the control of the property of the control of the co

Among leading private banks are the Industrial Development Bank of Tunkey, founded in 1990 to promote private industrial enterprise with the belp of the International Banks and such commercial banks as Akbank (1948). Demithank (1993), 15 Banksis (1924), and Yapi ve Kreib Banksis (1944). One new commercial bank, Raybank, wat formed in 1956, with a nominal eagrital of \$If\$ 000 000

The monetary unit is the kurus (pusstre) by the law of April 1916 The Turkish lira (pound), which is, in practice, employed as the monetary unit, is made up of 100 kurus?

Public Finance. The principal sources of hudgetary revenue are income and wealth tax, transaction tax, customs, consumption tax and revenues from State mompoles From the beginning of 1962 agricultural recones were taxed for the first time in recent history.

For the fiscal year 1970 (ending February 1971) stimated total bingdeary revenue was £f 28.60 million, against which expenditure totalling some £T 30 117 million were to be set About £T 11 on omition was allocated for investment expenditure by the public sector, a roughly equal amount going for current expenditures Some indication of the growth rate which these figures reflect may be seen by comparing them with the fiscal year 1968 bindget (ending February 1960) in which expenditures were £f 21,600 million and revenue £f 21 coo million and

Foreign Investments. Legislation, encouraging foreign puriate capital was promotigated in 1930 and 1935 but proved inadequate. It was superseded by the Law for the Promotion of Poreign Capital Investments of January 1935 currently in force. This enables foreign investors to export profits and original capital Subsequently, foreign investors have joined. Turkish interests in industrial projects and plants have here set up to manufacture tractors, tyres trucks diesel motion electrical equipment and other free rone? In 1938, enabling foreign companies in the zone to manufacture products for export without paying taxes or debeas on them.

Foreign Trafe. Before and during World War II, Turksh foreign thate figures showed a surplus of exports over imports Since 1047 this position has been reversed, and the demands of Turkey's economic development, especially since 1950, have inflated the imports bill withbout making equivalent short term additions to the country's exporting strength. However, nintl recently the trade situation was improving—the total definit shrank from \$120 million in 1965 to \$1.13 million in 1965 This favoriable trend was due to import controls and to the high process then fetched by copper, tobacco and cotton But in 1966 the first threat of the control \$40 million export total Unismally large imports for the development plan, particularly of capital goods, are beld responsible for this Exports under bulkeral trade agreements with Russia and other east European countries increased from \$60 million in 1964 to \$18 million in 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to \$18 million 1965 to

That such efforts have only managed to keep pace with the growth in Turkey a imports is easily seen in the 1970 trade figures, however Although exports totalled a record \$460 million imports stood at \$950 million leaving a trading deficit of \$360 million

The main exports by value in 1970 were cotton [\$175 million) haste into [\$80 million) principal imports by value were boilers and machinery (\$275 million), assorted minerals (\$170 million) transportation equipment (\$173 million), miscellaneous raw and immheit geods (\$100 million) and chemical products (\$75 million). By area most of Turkey's 1970 exports went to million By area most of Turkey's 1970 exports went to million By area most of Turkey's 1970 exports went to million By area most of Turkey's 1970 exports went to million By area most of Turkey's 1970 exports of the Turkey and all the East Bibo [\$13, million] in the EEC (\$3, 25 million), the dollar area (\$32x million) and EFTA countries (\$156 million) and EFEA countries (\$156 million) and EFEA thou [\$1, xx million].

An agreement with the European Economic Community was signed in September 1965 under which Turkey enters into a preparatory association with the Six for at least 5 to years During this time it will be given 1175 million in aid and will benefit from customs concessions on its main agricultural exports. The annual export quotas are tobacco 12,500 tons figs 13 000 tons suitanas 30 000 tons, and hazelnuts 17 000 tons in each case the quota is a birtle below the past average of exports to the EEC and further microsary depend on the agreement of the EEC members and Greece Eventually, it is hoped to enter into full associate membership of the Community

Planning. In 1960 the State Planning Organization was established. The first Five-Year Plan (1962-67) envisaged a total investment of £T 59,646 million; this is the equivalent of some 18 per cent of the gross national product over the period. It aimed at a 7 per cent annual rate of growth in G.N.P. from £T 53,000 million in 1962 to £T 74,000 million in 1967. Housing received the largest proportion of investment (20.3 per cent); agriculture was allocated £T 10,548 per cent) and transport and communications (13.7 per cent). The State aimed to provide the larger part of investment in agriculture, whereas in the manufacturing sector private investment predominated. The object of the plan was to increase annual manufacturing production by 13 per cent and to establish a balanced industrial structure.

Private investment rose rapidly during the years of the first plan, reaching satisfactory levels. However, the distribution of this investment was not wholly in accordance with the planners' wishes. The traditional sectors of the economy, such as light consumer goods industries and certain services, were over-emphasized and not enough attention was paid to capital-intensive industries such as machinery and chemicals.

Foreign exchange aid for the First Plan was mostly directed through the Aid for Turkey consortium, set up under the auspices of the OECD in 1972. It was composed of the United States, Britain, Canada, the members of the European Economic Community, Sweden, Austria, Norway, Switzerland and Denmark: aid provided by the consortium was in the region of \$1,500 million.

During the years of the First Plan, a real growth rate of 6.6 per cent per annum was achieved. Over 90 per cent of the scheduled investment targets were reached, private sector investment exceeding its target share of 40 per cent of total investment by a considerable margin.

THE SECOND PLAN

The second Five-Year Plan, covering the years 1968 to 1972, envisages an annual growth rate of 7 per cent—the same as that targeted for the First Plan. Investment is planned to reach £T 17,000 million in 1969 and to rise by some 11 per cent annually to nearly £T 29,000 million by 1972. Total investment through the Second Plan is expected to be £T 111,500 million from both the public and the private sectors. Foreign aid needs are expected to be less than in the First Plan. Overseas loans of some \$247 million in 1968 are expected to fall only about \$229 million in 1972. The long-term target if self-sustained economic growth, i.e. independent of foreign loans is planned to materialize by the next plan. In addition, a substantial increase in revenues from foreign exchange is sought; for this reason heavy emphasis is now placed on export opportunities and import substitution.

The emphasis of the second plan is on industrial development and the reduction of the dependence of agriculture on weather conditions. Of total investment 22.4 per cent is allocated to manufacturing industry, a sum double the amount realized between 1963 and 1967 when certain projects were delayed. Priority is now to be given to chemicals, fertilizers, iron and steel, paper, petroleum, cement and vehicle tyres, in order to replace imports and to provide the basis for long-term industrialization. Second priority is given to the manufacture of machinery and equipment which will receive top priority in the next plan. It is planned to invest the same sum in agriculture as under the first plan, with the emphasis on irrigation and machinery.

Government investment will concentrate on the infrastructure and education and health. Manufacturing industry will be mainly the responsibility of the private

sector but the government will help out, if the private

sector proves reluctant.

THE CONSTITUTION

PREAMBLE

Having enjoyed freedom, and fought for her rights and liberties throughout her history, and having achieved the Revolution of May 27th, 1960, by exercising her right to resist the oppression of a political power which had deteriorated into a state of illegitimacy through behaviour and actions contrary to the rule of law and the Constitu-tion, the Turkish Nation, prompted and inspired by the spirit of Turkish nationalism, which unites all individuals. be it in fate, pride or distress, in a common bond as an indivisible whole around national consciousness and aspirations, and which has as its aim always to exalt our nation in a spirit of national unity as a respected member of the community of the world of nations enjoying equal rights and privileges.

With full dedication to the principle of peace at bome, peace in the world and with full dedication to the spirit of national independence and sovereignty and to the reforms

of Atatürk,

Guided by the desire to establish a democratic rule of law based on juridical and social foundations, which will ensure and guarantee human rights and liberties, national solidarity, social justice, and the welfare and prosperity of the individual and society.

Now, therefore, the Turkish Nation hereby enacts and proclaims this Constitution drafted by the Constituent Assembly of the Turkish Republic, and entrusts it to the vigilance of her some and daughters who are devoted to the concept of freedom, justice and integrity, with the conviction that its basic guarantee lies in the hearts and minds of her citizens

PART ONE

Articles 1-9

The Turkish Republic is a nationalistic, democratic, secular and social State governed by the rule of law, based

The Turkish State is an indivisible whole comprising the territory and people, Its official language is Turkish Its capital is the city of Ankara Sovereignty is vested in the nation without reservation

and condition Legislative power is vested in the Turkish Grand National Assembly

This power shall not be delegated

The executive function shall be carried out by the President of the Republic and the Council of Ministers within the framework of law

Judicial power shall be exercised by independent courts on behalf of the Turkish Nation Laws shall not be in conflict with the Constitution

The provision of the Constitution establishing the form of the State as a republic shall not be amended

PART TWO

Articles 10-62

Every individual is entitled, in virtue of his existence as a human being, to fundamental rights and freedoms, which cannot be usurped, transferred or relinquished

All individuals are equal before the law irrespective of language, race, sex, political opinion, philosophical views, nr religion or religions sect.

Status of aliens, personal immunities, freedom of communication, travel, residence, thought, behef, press and publications

Right to controvers and rebut, to congregate, demonstrate and form associations Protection of individual rights

PART THREE

Articles 63-66 Grand National Assembly

The Grand National Assembly of Turkey is composed of the National Assembly and the Senate of the Republic.

The two bodies meet in joint session in such instances as are provided in the Constitution The Grand National Assembly is empowered to enact,

amend and repeal laws, to debate and adopt the bills on the State budget and final accounts, to pass resolutions in regard to minting currency, proclaiming pardons and amnestics, and to the carrying out of definitive death sentences passed by courts

Articles 67-69 Nationa l'Assembly

The National Assembly is composed of 450 deputies elected by direct general ballot Election qualifications elections shall be held every four years. The Assembly may hold new elections before the end of the four-year period

Articles 70-73 The Senate

The Senate of the Republic is composed of 150 members elected by general ballot and 15 members appointed by the President of the Republic, Election qualifications term of office is six years, one-third of members shall be re-elected every two years

Articles 74-94 Elections, Members Debates, Laws, Expenditure

Articles 93-101 The President of the Republic

The President of the Turkish Republic shall be elected for a term of seven years from among those members of the Turkish Grand National Assembly who have completed their fortieth year and received higher education; election shall be by secret ballot, and by a two-thirds majority of the plenary session In case this majority is not obtained in the first two ballots, an absolute majority shall suffice

The President is not cherble for re-election

The President elect shall dissociate himself from his arty, and his status as a regular member of the Grand National Assembly shall be terminated

The President of the Republic is the head of the State. In this capacity he shall represent the Turkish Republic

and the integrity of the Turkish Nation

The President of the Republic shall preside over the Council of Ministers whenever he deems it necessary, shall dispatch the representatives of the Turkish State to foreign states, shall receive the representatives of foreign states, shall ratify and promulgate international conventions and treaties and may commute or pardon on grounds of chronic illness infirmity or old age the sentences of convicted individuals

The President of the Republic shall not be accountable for his actions connected with his daties

All decrees emanating from the President of the Republic shall be signed by the Prime Minister, and the relevant Ministers The Prime Minister and the Ministers concerned shall be responsible for the enforcement of these decrees

The President of the Republic may be impeached for high freezon upon the proposal of one-third of the plenary session of the Turkish Grand National Assembly, and conviction of high treason shall require the vote of at least a two-thirds majority of the joint plenary session of both legislative bodies.

Articles 102-109. The Council of Ministers

The Council of Ministers shall consist of the Prime Minister and the Ministers.

The Prime Minister shall be designated by the President of the Republic from among the members of the Turkish Grand National Assembly.

The Ministers shall be nominated by the Prime Minister, and appointed by the President of the Republic from among the members of the Turkish Grand National Assembly, or from among those qualified for election as deputies.

As head of the Council of Ministers, the Prime Minister promotes co-operation among the Ministries, and supervises the implementation of the Government's general policy. The members of the Council of Ministers are jointly and equally responsible for the manner in which this policy is implemented.

Each Minister shall be further responsible for the operations in his field of authority and for the acts and activities of his subordinates. The Ministers are subject to the same immunities and liabilities as the members of the Turkish Grand National Assembly.

Articles 110-111. National Defence

The office of the Commander-in-Chief is integrated in spirit in the Turkish Grand National Assembly and is represented by the President of the Republic.

The Council of Ministers shall be responsible to the Turkish Grand National Assembly for ensuring national security and preparing the armed forces for war.

The Chief of the General Staff is the Commander of the armed forces

The Chief of the General Staff shall be appointed by the President of the Republic upon his nomination by the Council of Ministers, and his duties and powers shall be regulated by law. The Chief of the General Staff is responsible to the Prime Minister in the exercise of his duties and powers.

The National Security Council shall consist of the Ministers as provided by law, the Chief of the General Staff, and representatives of the armed forces.

The President of the Republic shall preside over the National Security Council, and in his absence this function shall be discharged by the Prime Minister.

Articles 112-125. Administration

Articles 126-131. Economic and Fiscal Provisions

The budget, accounts, development projects, natural resources.

Articles 132-136. The Judiciary

Judges shall be independent in the discharge of their duties. They shall pass judgment in accordance with the Constitution, law, justice and their personal convictions.

No organ, office, agency or individual may give orders or instructions to courts or judges in connection with the discharge of their judicial duty, send them circulars or make recommendations or suggestions.

No questions may be raised, debates held, or statements issued in legislative bodies in connection with the discharge of judicial power concerning a case on trial. Legislative, executive organs, and the administration are under obligation to comply with ruling of the courts. Such organs and the administration shall in no manner whatsoever alter court rulings or delay their execution.

Article 137. The Public Prosecutor

Article 138. Military Trial

Article 139. Court of Cassation

The Court of Cassation is the court of the last instance for reviewing the decisions and verdicts rendered by courts of law. It has original and final jurisdiction in specific cases defined by law.

Article 140. Council of State

The Council of State is an administrative court of the first instance in matters not referred by law to other administrative courts, and an administrative court of the last instance in general.

The Council of State shall hear and settle administrative disputes and suits, shall express opinions on draft laws submitted by the Council of Ministers, shall examine draft regulations, specifications and contracts of concessions, and shall discharge such other duties as prescribed by law.

Article 141. Military Court of Cassation

The Military Court of Cassation is a court of the last instance to review decisions and verdicts rendered by military courts. Furthermore, it shall try specific cases as a court of the first and last instance involving military matters as prescribed by law.

Article 142. Court of Jurisdictional Disputes

The Court of Jurisdictional Disputes is empowered to settle definitively disputes among civil, administrative and military courts arising from disagreements on jurisdictional matters and verdicts.

Articles 143-144. Supreme Council of Judges Articles 145-152. The Constitutional Court

POLITICAL PARTIES

Justice Party (A.P.): Ankara; f. 1961; Leader Süleyman Demirel; Sec.-Gen. Nizamet Tin-Erkmen; inherited much support from the former Democratic Party; supports private enterprise. Approximate annual budget TL 4 million.

Republican People's Party (G.H.P.): Ankara; f. 1923 by Kemal Ataturk; Leader İsmet İnönü; Sec.-Gen. Şeref Bakşık. For many years the Republican People's Party was the only party in Turkey. It favours a considerable degree of State enterprise along with continuing private enterprise. In recent years the party has moved to the left of centre.

Democratic Party: Ankara; f. 1970 by deputies and senators expelled from the Justice Party; Leader Ferruh Bozbeyli.

Reliance Party (G.P.): Ankara; f. 1967 by 45 members of Parliament from the Republican People's Party, who broke away as a result of this party's "left of centre policies"; stands for political democracy, social justice and security, protection of private investment, priority for education; Leader Professor Turhan Feyzioglu.

National Order Party (M.N.P.): Ankara; f. 1969; extreme right-wing. It favours free enterprise, constitutional changes, the abolition of the Senate, reduction in the number of members of Parliament, direct Presidential election, control of the Press; dissolved in June 1971 by the Turkish Constitutional Court for violating the constitution; Pres. Prof. Erbakan.

Nation Party (M.P.): Ankara; f. 1962; a faction of the Republican National Peasants' Party with one seat in the Senate. Traditional and religious in character; Leader Osman Bolükbaşı.

New Turkey Party (Y.T.P.): Ankara; f. 1961; moderate right-wing; Leader Prof. Tahsin Banguoglu.

Turkish Workers' Party (T.I.P.): Ankara; f. 1961; left-wing; one Senate seat and two National Assembly seats at the latest elections; Leader Dr. Behice Boran.

National Action Party (M.H.P.): Ankara; f. 1954; Leader Col. Alparslan Turkes; secularist and nationalist; seeks progressive reform.

Union Party: Ankara; f. 1968; Conservative.

JUDICIAL SYSTEM

Until the foundation of the new Turkish Republic, a large part of the Turkish civil law-the laws affecting the family, inheritance, property, obligations, etc -was based on the Koran, and this holy law was administered by special religious (Sharia) courts The legal reform of 1926 was not only a process of secularization, but also a root and branch change of the legal system. The Swiss Civil Code and the Code of Obligation, the Italian Penal Code, and the Neuchâtel (Cautonal) Code of Civil Procedure were adopted and modified to fit Turkish customs and traditions

Court of Cassation: The court of the last instance for reviewing the decisions and verdicts rendered by courts of law It has original and final jurisdiction in specific cases defined by law Members are elected by the Supreme Council of Judges

Council of State: An administrative court of the first instance in matters not referred by law to other administrative courts, and an administrative court of the last instance in general. Hears and settles administrative disputes and expresses opinions on draft laws submitted by the Council of Ministers

Military Court of Cassation; A court of the last instance to review decisions and verdicts rendered by military

Court of Jurisdictional Disputes: Settles disputes among civil, administrative and military courts arising from disagreements on purisdictional matters and verdicts

Supreme Council of Judges; Consists of eighteen regular and five alternate members. Decides all personnel matters

relating to judges Constitutional Court: Consists of fifteen regular and five alternate members Reviews the constitutionality of laws passed by the Turkish Grand National Assembly. Sits as a High Council empowered to try senior members of state The rulings of the Constitutional Court are final Decisions of the Court are published immediately in the Official Gazette, and shall be binding on the legislative, executive, and judicial organs of the State

Public Prosecutor: The law shall make provision for the tenure of public prosecutors and attorneys of the Council of State and their functions

The Chief Prosecutor of the Republic, the Chief Attorney of the Council of State and the Chief Prosecutor of the Military Court of Cassation are subject to the provisions applicable to judges of higher courts

Military Triat: Military trials conducted by military and disciplinary courts. These courts are entitled to try the military offences of military personnel and those offences committed against military personnel or in military areas, or offences connected with mulitary service and duties, Military courts may try non military persons only for mulitary offences prescribed by special laws

Independence of Courts: Judges shall be independent in the discharge of their duties. They shall pass judgment in accordance with the Constitution, taw, justice and their personal convictions. No organ, office, agency or individual may give orders or instructions to courts or judges in connection with the discharge of their judicial duty, send them circulars, or make recommendations or suggestions

No questions may be raised, debates held, or statements assued in legislative bodies in connection with the discharge of judicial power concerning a case on trial. Legislative, executive organs, and the administration are under obligation to comply with ruling of the courts Such organs and the administration shall in no manner whatsoever alter court rulings or delay their execution

RELIGION

PMETRIMS

Diyanet Isleri Ressi (Head of the Muslim Faith in Turkey) Att Riza Hauses

Over 98 per cent of the Turkish people are Muslims, mainly of the Sunni rite Under the Republic, from 1923 ouwards action was taken to reduce the influence of rela gion on state affairs e g , its association with the schools was curtailed mosques and churches were sometimes closed and faculties demed to their adherents, both Muslim and Christian The Muslim faith was also disestablished. After 1950 there was a change, and religious life was to a certain extent revived. The 1960 revolution is trying to bring about a return to the more secular republic of Atatürle

NON-SITISTIMS

Mainly Greek Orthodox, Armenian Christians and Tews

THE PRESS

Under the Constitution of 1961, "the press is free within the limits of the law". Provision is made for reconrse to a constitutional court in issues involving laws affecting the Press.

Following the Revolution of 1960 and the new Constitution, which also introduced a measure of protection for editors, came the Law for Preventive Measures of March 1962. This law provided penalties of imprisonment with forced labour for persons criticizing the 1960 Revolution or for defending the pre-1960 or pre-Atatürk régimes, or suggesting that Turkey is unable to thrive as a democracy.

As well as these items of legislation there are a number of articles in the Penal Code, some traceable back to Mussolini's fascist code, which sometimes affect the Press very harshly. Political offences affecting the Press and the protection of the State and civil order are treated in Articles 141 and 142, the latter providing penalties of up to 15 years imprisonment for Communist propaganda. Articles 158 and 159 penalize defamation of the President, the Republic, the nation and institutions such as the army, parliament and the courts.

The liberal conditions which followed the Revolution led to abuses. In the attempt to develop greater responsibility and self-discipline within the Press, the Press Council or Court of Honour was founded in 1960. Composed of publishers, journalists and private individuals, it censures those violating the voluntary Code of Ethics adopted by editors and owners. Lacking legal power, the Court has the disadvantage of depending on the support of newspaper membership, which may be withdrawn by editors seeking to avoid the Court's moral sanctions.

A stronger incentive of self-discipline was provided in 1961 by the Board of Official Announcements which supervises the just distribution of official announcements and advertising (which serve as an essential subsidy to the Press.) The Board, composed of a broadly chosen group of representatives of different professions, by its power to withhold advertisements, obliges editors to maintain standards and observe the Code of Ethics, and has put an end to the abuses of advertisement distribution of the pre-Revolutionary period.

Formerly most newspapers were family businesses, but recently companies have emerged and newspaper groups are beginning to develop. Hürriyet, Milliyet and Hayat each head a group of papers. The Hürriyet Group includes Hürriyet, Yeni Gazeti, Günaydın and several weekly and monthly papers and its own news agency. The Hayat Group, which is the largest group owning periodicals, includes Hayat, Ses (the cinema and arts magazine), and several children's periodicals. Most papers are politically independent. A small number, while not being political organs, are indirectly associated with political parties. Noteworthy among these are Ulus, which supports the Republican People's Party, and Son Havadis, which supports the Justice Party.

Almost all Istanbul papers are also printed in Ankara on the same day. Among the most serious and influential papers are the dailies Milliyet and Cumhuriyet. Akbaba is noted for its political satire. The most popular dailies are the Istanbul papers Hürriyet, Milliyet, Tercüman, Son Havadis, Günaydin, Akşam and Cumhuriyet; Yeni Asir, published in İsmir, is the best selling quality daily of the Aegean region. A major popular weekly is the illustrated magazine Hayat.

FINANCE

(cap = capital p u = pard up dep = deposits m = million bis = hranches)

Amounts in Turkish hras except where otherwise stated. Figures given for capital and deposits are for the end of the calcular year state(4).

The Central Bank of the Republic of Turkey has originally founded in 1931 and constituted in its Present form after the revolution of 1960. The Central Bank is the bank of issue and is responsible also for public deposits and medium and long term bornovings of the banks I in addition all international payments go through the Bank and all foreign exchange is held by the Bank

There are some 50 other banks functioning in Turley Turteen had been created by special laws to fulls special died services for particular industries. The Somerbank directs the operation of a number of state-world factories. Ethank operates primarily in the extractive industries and electric power industries the Agrecultural Bank and electric power industries the Agrecultural Bank makes loans for agriculture the Maritime Bank operates government-world port facilities the merchant manue and its own fleet of ships the Real Estate Credit Bank participates in industrial undertakings and the constituction of all types of buildings Other specialized banks deal with tourism municipalities and mortgages etc.

The largest of the 33 private sector Turkish banks is the Turkye 15 Banksis which operates 380 hranches and 62 agencies The private banks borrow at medium and long term mainly from the State Investment Bank.

These banks are required to contribute credits to the Bank Laquidation Fund set up by law in December 1960 to liquidate gradially those banks whose financial standing was unsatisfactory. This fund is denyed from annual contributions of o2 per cent of savings and consumercial deposits and since 1960 has been made up to the required amount by the Central Bank.

There are five foreign banks operating branches in Turkey The Ottoman Bank which was founded in 1863 is the oldest bank in Turkey and has strong British and French interests The agreement with the Turkish Government express in 1975

There are several other credit institutions in Turley, technique the industrial Development Bank of Turleys which encourages sprivate investment in industry by sching as underwriter in the issue of share capital The Turleys. Sinar Kalkimma Bankasi is a privately owned development of the World Bank to stimulate industrial growth in the Drivate Section.

There are numerous co-operative organizations and in the rural areas there are Agricultural Sale Co-operatives and Agricultural Co-operatives. There are also a number of savings institutions

TRANSPORT

RAILWAYS

Tokuya Gamhuriyeti Devlet Demiryoliari İşletmesi—TCDD (Turbità State Raukovy) Ankara I 1924 uperates all railwaya and connecting ports the Raulway Administra tion acquired the status of a public corporation in July 1953 Gen Dir Ahmet Sarp Gen Sec Fahir. Blicze

The total length of the railways operated within the nabonal frontiers is 8 ood 8m. A five-year plan for modernizing the railway system came into force in January 1963. A second dive-year plan 1963—22 amis at continuing this work, with discellust on and electrification projects The Haydarpas, Gebre section of the Haydarpas, Arriye Double Track Electrification Project was opened in May 1969.

The Central Treaty Organization Agreement between Torkey and Iran provided for the linking of the two rashway networks by the construction of the Muy-Tatvan railroad which opened in October 1964. Work on this his between Van and Kotor is still under construction and is expected to be completed by the end of 1970.

ROADS

General Directorate of Highways Ankara Dir Gen Szevet Bayranoöku

At the end of 1957 the total length of all weather high ways was 73 500 km and the highway network totalled 108 000 km. It is planned to complete a further 30 000 km of all weather roads by 1072

In 1965 a ten year programme of road unprovement for eastern Turkey was announced A 78 km man road isponsored by CENTO) runs from Sivelan in south-eastern Turkey to Reasyle to I fake Urman in Iran Construction of a TL 1 300m six lane bridge across the Bosphonis was started early in 1970 for completion in 1972. It will be the fourth longest bridge in the world and the biggest in Europe with a centre pan of 1 ory, metres and a length of 1560 netters. The existing ferry services constitute a major traffic bottleneck in the Turkesh transport system. Hans are being made for the construction of a bndge across the Golden Horn.

TOURISM

Ministry of Tourism and Information: Gazi Mustafa Kemal Bulvari 33, Ankara; Dir.-Gen. of Tourism Seving. Каунак; Dir.-Gen. of Information Минмет Довара.

CULTURAL ORGANIZATION

Fine Arts General Directorate (Güzel Sanatlar Genel Müdürlüğü): Education Ministry, Bakanlıklar, Ankara; Dir.-Gen. Mükerrem Keymen.

PRINCIPAL THEATRES

State Theatro General Directorate (Devlet Tiyarrosu Genel Müdürlüğü): part of the above; runs eight playhouses; Dir.-Gen. Cüneyt Gökçer.

Büyük Tiyatro (Great Theatre): Ankara. Küçük Tiyatro (Small Theatre): Ankara. Devict Operasi: Ankara; national opera and ballet; permanent classical ballet company of 50 dancers.

There are three other state theatres in Ankara, and five private companies. Istanbul has thirteen private companies.

Istanbul Municipal Theatro: Harbiye, Istanbul; f. 1914; presents wide range of plays, Turkish and international, classical and modern; six playhouses; Artistic Dir. Vasrt Riza Zobu; Admin. Dir. Baskt Dedeoglu; publ. Review.

Istanbul City Opera: Taksim, Istanbul; Dir. Muhsin Ertugrul.

ORCHESTRAS

Istanbul Municipal Symphony Orchestra: Taksim, Istanbul Presidential Symphony Orchestra: Ankara.

ATOMIC ENERGY

Turkish Atomic Energy Commission: Prime Minister's Office, Bestekar Sokak 29, Ankara; f. 1956; controls the development of peaceful uses of atomic energy; 10 mems.; Chair. Hon. Munts Fakk Ozansoy; Sec.-Gen. Danis Koper; publ. Activity Reports, Research Reports, etc.

There are nuclear research centres at Çekmece, near Istanbul, and at Aukara.

Technical University of Istanbul: graduate school of nuclear engineering.

Institute of Radiobiology: University of Aukara; subcritical assembly. Institute of Nuclear Science: Faculty of Science, University of Teheran, Teheran; f. 1959; under the aegis of the Central Treaty Organization, of which Turkey is a member. Courses are conducted in the use of radio isotopes for agriculture, industry and medicine.

Co-operation. Turkey is a member of the International Atomic Energy Agency (IAEA) and the European Nuclear Energy Agency (ENEA). IAEA is providing assistance which includes equipment and technical aid for the universities of Ankara and Istanbul.

Power: Turkey's first nuclear power station, with a capacity of 400 MW, is planned for completion in 1976.

EDUCATION

One of the greatest problems confronting the new Republic was that of modernising and extending the educational system, for at that time only 11 per cent of the population were literate. New schools had to be built and equipped in towns and villages; teachers and inspectors trained, and suitable schemes of training devised for them; technical courses provided to equip skilled workers for industry and agriculture; and, above all, training in reading and writing had to be provided for the millions of peasants who had received no schooling.

Under the Ottoman Empire there had been a dual system of education—religious schools existing side by side with others in which ordinary educational subjects were taught, although religious instruction played a large part. Unity of education was recognised as the first requisite; the theological schools were converted into theological seminaries for the training of clergy, or abolished; the others were secularised. The Ministry of Education was declared the sole authority in all educational matters.

One of the main obstacles to literacy was the Arabic script, which required years of study before proficiency could be attained. In 1928, therefore, a Turkish alphabet was introduced, using Latin characters. At the same time the literary language was simplified, and purged of some of its foreign elements. By 1968-69 the education budget

amounted to nearly LT 3,924 million, around 17 per cent of the state budget.

People's Schools

This change of script created a need for schools in which reading and writing in the new alphabet could be taught to adults. Temporary institutions known as "peeple's schools" or "national schools" were set up everywhere. During the winter mouths these schools gave instruction in reading and writing and other basic subjects to men and women beyond the normal school age. Between 1928 and 1935 some 2 million people received certificates of proficiency. Since then education in Turkey has made big advances, but although literacy is estimated at 65 per cent in towns, it is still much lower in the villages (30.3 per cent in 1960).

Primary Education

A compulsory school attendance law had been passed in 1913, but only under the Republic were measures taken to enforce this. Primary education is now entirely free, and co-education is the accepted basis for universal education. The number of schools has risen from 12,511 in 1950 to 37.240 in 1969, and the number of teachers from 27,144 to 130,730. In 1969-70, 5,000,000 children were attending primary schools.

Secondary Education

The reorganization of the system of secondary education began in the early 1920s. Before the reorganization there were two types of secondary schools state schools providing one or two educational stages, and local schools corresponding approximately to the modern middle schools in 1926 the system of co-education was adopted in day schools of the middle-school group

Present Organisation This period of education lasts six years, and is free

The secondary schools are divided into two stages middle schools and lyeles, and students who intend to proceed to higher educational institutions must pass through both stages, spending three years in the middle school and three in the lyels

The middle school although complementary to the lyber as a separate unit, designed to give a definite and complete education to those students who at the end of the course will proceed directly to work. The state examina tion is taken by all students at the end of the third year fordatasts of a middle school are qualified either to take up an unskilled occupation or to enter upon a vocational course at a school of a higher grade

The lyde taken the student up to the age of 17 or 18 years and those who wash to proceed to an institute of higher education must pass the state matriculation examination. The study of a modern language (English, French or German) is compulsory in middle schools and lydes: In addition, Latin and Greek have been taught in some lydes made 1940. The number of secondary schools has increased from 343 to 1950 to 1,885 to 1959, including the lyses? The number of students in these schools in the 1959-70 school year totalled 1970 35

Adult Education. Since 1932, reading rooms have been citablished in every town and many villages. They are centres of social and cultural life and provide evening classes. Their libraries meeting halfs and recreational lichities are open to all In the towns there are also evening finde schools which provide technical training for adults, and travelling course are sent out to the villages

Higher Education. Higher educational institutions in Turkey were founded and are administered, by the State These institutions include the nulversities and the higher professional schools. There are now eight universities and Simitatives of higher education (including teacher training session of the second second second second second second second second second second second second second second second second second second second at universities and other institutes of higher education rose to 1zz po in the academic year 1956-70

Technical Education. The events of the past thirty years have shown that vocational education is an all important factor in the life and progress of all nations and the 1931 programme of the People's Party therefore accepted the desirability of setting up in Turkey professional and trade schools. The problem of technical education began to be seriously considered first in 1926 specialists were invited from Europe and America, and a plan was drawn up for perfecting the existing vocational schools and for founding new ones to meet the economic needs of each region. In addition plans were made for evening schools to train craftsmen and for the founding of teachers' technical training colleges There are two such colleges in Ankara, one for men and one for women The number of technical and vocational schools and colleges in 1969-70 was 741, the number of instructors was 11 797 and 206 299 students were enrolled

Teachers' Training. There are five types of teachers' training colleges in Turkey, excluding the universities

Normal Schools Craduates of the normal schools are appointed to positions in the primary schools, and are eligible by examination for admission to certain higher teachers' training nutritutions. There are two types of normal schools—six year schools, grades 6-11, following the primary school and thore year schools following the middle echool. All normal schools are boarding schools but day students are accepted. There are 21 six year normal schools and 45 three year normal schools based on the middle schools.

Secondary Teacher' Training Schools and Pedagogical Institutes. There are ten econdary teachers' teaming schools and pedagogical institutes one at Ankara, one at Itanbul, one at Burse, one at Itanbul, one at Burse, one at Itam and others at Balleyer, Dyarbaker, Konya, Samsun Erzurum and Trabzon These schools are normally boarding schools, the following subjects can be studied at one or other of the ten institutions—literature, science, music, drawing and handicrafts, physical education, German French, English The gradu atte of the pedagogy departments are appointed to be primary school inspectors, or teachers of professional subjects in the normal schools

jects in the normal schools

Lycke Teachers Training Colleges. There are two lycks
teachers' training colleges, one in Istanbul and one in
Ankara, offenng courses in thirteen subjects—Turkish
language and literature, history, geography, philosophy,
French English German mathematics—satronomy, mathematics physics, chemistry physics, physics-chemistry, natural sciences, and commerce Lycke and commercial lycke
graduates are admitted to these colleges, and graduates
teach in lyckes and vocational schools of lycke standard

Technical Trachers' Training Colleges for Men and Women There are three, two for men and one for women, two are in Ankara and one is in Istanbul, the courses are four-year, and graduates to the college-steach eitherst at boys' trade schools and institutes, or at guis' schools of domestic scence and guis' trade schools and institutes

Commercial Teachers' Training College The College is at Ankara it offers a three year course, and prepares teachers for the commercial lystes and commercial middle schools Students from the Universities of Istanbul and Ankara

Students from the Universities of Istanbul and Ankara may qualify for a teaching certificate by following certain courses including one on pedagogy

Language of instruction: English; Private control; Academic year; November to July (two semesters).

Rector: Prof. Dr. ERDAL INÖNÜ.

The library contains over 100,000 volumes.

Number of teachers: 530. Number of students: 5,472.

Publication: METU Journal of Pure and Applied Sciences (three a year).

DEANS:

Faculty of Administrative Sciences: Y. GÜRBÜZ, PH.D.

Faculty of Architecture: E. DERYA, M.ARCH.

Faculty of Arts and Sciences: Prof. Dr. B. BAYSAL. Faculty of Engineering: Prof. Dr. ISMET OZDEMIR.

The Faculty of Arts and Sciences includes Departments of Education, Agriculture and Forestry, which are planned to become separate schools.

The University is being set up with help from the United Nations Special Fund and further assistance from the United Kingdom, United States, and Holland. It operates under an independent Board of Trustees on grants from the Turkish Government. There is a ten-year building programme which will provide for an ultimate enrolment of 20,000 students on a 12,000 acres site six miles south of Ankara. Admission is by competitive examination given in centres in Turkey and several cities in the Middle East. The aim of the University is to serve Turkey and the Middle East by offering professional education of high standard.

United Arab Republic (EGYPT)

PHYSICAL AND SOCIAL GEOGRAPHY

SITUATION

Egypt occupies the north-eastern corner of the African continent with an extension across the Gulf of Suez into the Sinai region which is usually but not always regarded as lying in Asia The area of Egypt is approximately 386 200 sq miles (2 002 000 sq km) but of this only 4 per cent can be said to be per manently settled the remainder being desert or marsh Egypt hes between Lat 22° and 32° N and the greatest distance from north to south is about 674 miles (1024 km) and from east to west 770 miles (1240 km) giving the country a roughly square shape with the Mediterranean and Red Seas forming respectively the northern and eastern boundaries Ligypt has political frontiers on the east with Israel on the south with the Republic of the Sudan and on the west with Libya The actual frontiers run in general as straight lines drawn directly between defined points and do not normally conform to geographical features (though since June 1967 the de facto frontier with Israel has been the Suez Canal)

Egypt occupies an almost unique place in the world as a region where in all probability the earliest developments of civilization and organized govern ment took place Though many archaeologists would not wholly subscribe to the view of Egypt as actually the first civilized country there can be no doubt that from very early times the lower Nile Valley has been prominent as possessing strongly marked unit; with a highly specialized and characteristic way of life Empires with fluctuating boundaries and with varying racial composition has e arisen in neighbouring lands of the Middle East but Egypt has seemed able to stand relatively unchanged with the facility of absorbing immigrants and outside ideas of surviving military occupation and defeat and of maintaining her own culture finally shaking clear of foreign influence and rule This process apparent on many occas ons in the past may once again be repeating itself in the present century

PHYSICAL FEATURES

The reasons for this remarkable persistence of cultural cohesion amongst the Taytham poolen may be found in the geography of the country Leypt consists essentially of a narrow troughlike valley some 2 to miles wide cut by the Ruver Nale in the plateau of morth-east Africa. At an earlier geological period a grid of the Mediterranean Sea probably extended as far south as Cairo but deposition of sith by the Nule has entirely filled up this gull producing the fan like shaped Delta region (8 500 sq miles in area) through which flow two main distributary branches of the Nilo-the eastern or Damietta branch (150 miles long) and the western or Rosesta branch (146 miles)

together with many other minor channels. As deposition of silt takes place large stretches of water are gradually impounded to form shallow lakes which later become firm ground. At the present there are four such stretches of water in the north of the Delta from cast to west and in order of size Lakes Menzaleh Brullos Jökk and Marut

Upstream from Cairo the Nile Valley is at first 6 to to miles in width and as the river tends to he close to the eastern side much of the cultivated land and also most of the big towns and cities he on the western bank Towards the south the river valley gradually narrows until at about 250 miles from the frontier of the Sudan it is no more than 2 miles wide Near Aswan there is an outcrop of resistant rock chiefly granite which the river has not been able to erode as quickly as the rest of the valley This gives rise to a region of cascades and rapids which is known as the First Cataract Four other similar regions occur on the Nile but only the First Cataract lies within Egypt The cataracts form a barrier to human movement upstream and serve to isolate the Egyptian Aile from territories farther south In Ancient Egypt, when river communications were of chief importance there was a traditional division of the Vile Valley into Lower Egypt (the Delta) Middle Egypt (the broader vailey above the Delta) and Upper Egypt (the narrower valley as far as the cataracts) Nowadays it is usual to speak merely of Upper and Lower Egypt with the division occurring at Cairo

The fertile strip of the Nile Valley is isolated on the south by the cataracts and by the deserts and swamps of the Sudan on the north by the Mediterranean Sea and to east and west by desert plateaus about which a little more must be said. The land immediately to the east of the Nile Valley spoken of as the Eastern Highlands is a complex region with peaks that rise 6 000 to 7 000 ft. but also much broken up by deep valleys that make travel difficult. Owing to aridity the whole region is sparsely populated with a few partly nomadic shepherds one or two monastenes and a number of small towns associated chiefly with the exploitation of minerals-petroleum iron manganese and granite-that occur in this region Difficult land ward communications mean that contact is mostly by sea except in the case of the fronfields. The Sinai separated from the Eastern Highlands by the Gulf of Suez is structurally very similar but the general plateau level is tilted giving the highest land (again nearly 7 000 ft in elevation) in the extreme south where it rises in bold scarps from sea level Towards the north the land gradually slopes down ultimately forming the low lying sandy plain of the Sinu desert which fringes the Mediterranean Sea Because of its low altitude and accessibility the Sinai in spite of its desert nature, has been for many centuries an important corridor linking Egypt with Asia, and is crossed by a railway (torn up 1968) and motor road. Since June 1967 it has been occupied by Israeli forces.

West of the Nile occur the vast expanses known as the Western Desert. Though by no means uniform in height, the land surface is much lower than that east of the Nile, and within Egypt rarely exceeds 1,000 ft. above sea-level. Parts are covered by extensive masses of light shifting sand that often form dunes; but in addition there are a number of large depressions, some with the lowest parts actually below sea-level. These depressions seem to have been hollowed out by wind action, breaking up rock strata that were weakened by the presence of underground water, and most hollows still contain supplies of artesian water. In some instances (as for example, the Qattara depression, and the Wadi Natrun, respectively south-west and southeast of Alexandria) the subterranean water is highly saline and consequently useless for agriculture; but in others-notably the oases of the Fayyum, Siwa, Dakhla, Behariya, and Farafra—the water is sufficiently sweet to allow use for irrigation, and settlements have grown up within the desert.

CLIMATE

The main feature of Egyptian climate is the almost uniform aridity. Alexandria, the wettest part, receives only 8 inches of rain annually, and most of the south has 3 inches or less. In many districts rain may fall in quantity only once in two or three years, and it is apposite to recall that throughout most of Egypt, and even in Cairo itself, the majority of the people live in houses of unbaked, sun-dried brick. During the summer temperatures are extremely high, reaching 100-110°F. at times and even 120° in the southern and western deserts. The Mediterranean coast has cooler conditions. with 90° as a maximum; hence the wealthier classes move to Alexandria for the three months of summer. Winters are generally warm, with very occasional rain; but cold spells occur from time to time, and light snow is not unknown. Owing to the large extent of desert, hot dry sand-winds (called *khamsin*) are fairly frequent particularly in spring, and much damage can be caused to crops; it has been known for the temperature to rise by 35° in two hours, and the wind to reach 90 m.p.h. Another unusual condition is the occurrence of early morning fog in Lower Egypt during spring and early summer. This, on the other hand, has a beneficial effect on plant growth in that it supplies moisture and is a partial substitute for rainfall.

IRRIGATION

With a deficient rainfall over the entire country, human existence in Egypt depends closely on irrigation from the Nile; in consequence it is now necessary to consider the regime of the river in some detail. More detailed reference to conditions outside Egypt is made in the section on the geography of Sudan (above); but it may here be stated in summary that the river rises in the highlands of East Africa, with its main stream issuing from Lakes Victoria and Albert. In the southern Sudan it wanders sluggishly across a flat

open plain, where the fall in level is only 1:100,000. Here the shallow waters become a vast swamp, full of dense masses of papyrus vegetation, and this section of the Nile is called the Sudd (Arabic for "blockage"). Finally, in the north of the Sudan, the Nile flows in a well-defined channel and enters Egypt. In Upper Egypt the river is in process of cutting its bed deeper into the rock floor; but in the lower part of its course silt is deposited, and the level of the land is rising—in some places by as much as 4 inches per century.

The salient feature of the Nile is, of course, its regular annual flood, which is caused by the onset of summer rains in East Africa and Abyssinia. The flood travels northward, reaching Egypt during August, and within Egypt the normal rise in river-level used to be over 21 feet, but owing to irrigation works is now only 15 feet. By December the floods have subsided, and the lowest level occurs in May. This cycle has been maintained for several thousand years though the actual maximum of flood-level varies a little each season. However, the flooding had by 1969 become a feature of the past so far as Egypt is concerned (see the section on the Aswan High Dam below).

Originally, the flood waters were simply retained in specially prepared basins with earthen banks, and the water could then be used for three to four months after the flood. Within the last century, by the building of large barrages, water is now held all the year round, and so cultivation can take place at any season. With the old system of basin irrigation one or two crops could be obtained annually; with the newer, perennial system, three or even four; and whereas in the past barley and wheat were the main crops, maize and cotton, which can tolerate the great summer heat provided they are watered, now take first and second place. Basin irrigation still prevails in Upper Egypt, but the rest of the country now employs perennial methods.

This change-over has allowed a considerable increase in the population of Egypt, which has risen from about 2½ million in 1800 to 30 million at the present time. This rate of increase shows no sign of slackening—rather, in fact, the reverse—so that already a few districts of Egypt have a population density of over 6,000 per square mile; and as 99 per cent of all Egyptians live within the Nile Valley (only 4 per cent of its area) there is considerable over-crowding and pressure on the land.

With most Egyptians entirely dependent upon Nile water, the point has now been reached that almost all the water entering Egypt is fully utilized—the construction of one barrage now affects all the others downstream—and thus it is easy to see why Egyptian statesmen attach such importance to the unity of the Nile Valley. Undisputed possession of the Sudan would allow Egypt to have more control of Nile water, and possibly to undertake improvements in the Sudd area, thereby reducing the present enormous losses by evaporation which at present amount to some 70 per cent of the total flow. Another political problem is concerned with the effects due to devoting an increased area of the Nile Valley to the growing of commodities for export: cotton, rice and vegetables. Such a change

from agreuitural self sufficiency to a cash economy involves the purchase abroad of ferthizers and even
foodstuffs, and is indicang considerable social changes
within the country Moreover, so long as only one or
two crops were taken per year, the silt laid down by
the annual floods maintained soil fertility, but now
that three or four crops are taken the import of
fertilizer is essential Hence Egypt has become
increasingly sensitive to world trade prices The
position of the merchant and capitalist has greatly
improved, often at the expense of the peasant farmer

Difficulties and opportunities relating to the use of Nile water are exemplified in the High Dam scheme at Aswan This involves creating a larger reservoir, somo 350 miles in length, which has now gradually extended southwards across the Sudanese frontier thereby inundating the town of Wadi Halfa Some 55-60 000 Sudanese are thus being displaced and these are in process of resettlement at Kashm el Girba, a district lying south east of Khartoum Egyptians displaced by the scheme are being rehoused in 33 villages around Kom Ombo, total costs of resettlement will amount to £135 million Prior to 1959 technical and political objections delayed the High Dam scheme, and as the cost of the dam (estimated at £345-400 million) could not be met by the Egyptian Government alone, application was made to the World Bank America and Britain for a loan, This was refused (Sudanese opposition being one, but only one, factor in this refusal), whereupon Egyptian reaction was to expropriate the Suez Canal Company, in order to finance part of the Aswan scheme

Sonset offers to assut were made and accepted, and in 1999 a first Soviet credit of £33 million allowed pre-liminary work to begin in December of the same year In 1960 further agreement was reached by which the USSR supplied credits up to £8 million (making a total of £44 million) together with technical and material assistance, and in 1964 further proposals for credit and leans were made by Mr. Khrisschew Egypt must thus find at least £200 million in addition to repayments at a later stage of the Russian credits.

In May 1964 the first phase of the High Dam was maigurated by President Nasser and Mr Khrushchev The High Dam is 3 600 metres across, with a girth of 360 metres at the troy be dead and 40 metres at the top It holds back the largest artificial lake in the world, stretching 900 km and finally crossing the Sndarese border. It is making possible the large scale strong of water from year to year, thus evening out the effects of a bad (lary) season, and its irrigation potential is put at 2 million feddans in Lower Egypt, which, with local possibilities nearer Asvan will add about 30 per cent to the total cultivable area of Egypt Besides this, twelve generator units are to be incorporated in the dam and these will give considerable quantities of electure power at extremely low cost-estimated as

below that obtaining in many parts of Europe, and about half of that of electricity in London This will, it is expected, be a most important aid to industrialization By December 1956 nine of the twelve generators had been installed and the remaining three were due to be installed by July 1900 Extensive deposits of ron ore near Asivan are already treated by hydroelectric power, and ultimately tims cheap power will come unto use in Lower Egypt in duiding the development of the control of the contro

Construction has also begun on a new barrage at Girga and the existing Aswan Dam is currently being raised from 120 to 122 feet in height

RACE

The racial origins of the Egyptian people present certain problems. In the deserts to east and west of the Nile Valley the population is of unmixed Mediterrancan strains, but within the Nile Valley itself there is a special native Egyptian type that would seem to have developed partly from intermixture The Egyptian peasant is more heavily built and muscular than the nomadic Bedouin, and his colouring is intermediate between the lighter brown of Syrian and Palestinian Arahs and the dark skins of the negroid peoples of the Sudan and Ahyssinia Facial features show some resemblance to those of other Arabs, but despite this there is often more than a hint of the features depicted in ancient monuments. It might thus be reasonable to suggest that there seems to have developed within Egypt a special racial sub type, hasically Mediterranean with smaller elements both from the south and the north hut also greatly affected by local indigenous conditions which have given rise to a specific Egyptian racial type

LANGUAGE

Arabic is the language of almost all Egyptians, though there are very small numbers of Bether-speaking villages in the western cases. Most educated Egyptians also speak either French or English, other with a preference for the former. This is a reflection of the traditional French interest in Egypt, which is reciprocated governmental decrees are sometimes published in French, as well as Arabic, and newspapers in French have an important circulation in Caro and Akraedina Small colonies of Greeks and Ammenians are also a feature of the larger Egyptian towns it is bould perhaps be noted that the Arabic name for Egypt, Misr, is always used within the country itself.

WBF

HISTORY

Geography has influenced the history of Egypt from the earliest times. The narrow strip of cultivable land along the banks of the Nile between the First Cataract and the Delta is distinct from the extensive and fertile plain of the Delta itself, but the resultant tendency to separatism has been counterbalanced by the dependence of the people on the annual Nile flood: the control and exploitation of the water and silt have necessitated co-operation and obedience to routine and authority. The eastern and western deserts seal off the lower reaches of the Nile Valley from the neighbouring territories in Africa and Asia. Until recent times communication with the outside world was largely restricted to the route up the river into Nubia, the sea route across the Mediterranean to Syria and the land route to Palestine across the northern fringe of Sinai. The effect of Egypt's relative isolation has been to produce a high degree of cultural individuality.

PHARAONIC EGYPT TO 671 B.C.

Traditionally Egyptian history begins with the semi-legendary Menes, the first ruler of the united kingdom of Upper and Lower Egypt at the end of the fourth millenium B.C. But the flowering of the Old Kingdom came in the third millenium under the IVth Dynasty, which had its capital at Memphis, near the apex of the Delta. The technical and engineering progress of this period is witnessed by the pyramids. These and other works indicate a powerful monarchy commanding great resources.

This efflorescence was followed by a decline. Not until the XIth and XIIth Dynasties (c. 2000 B.C.) does the resurgence of a united Egypt in the Middle Kingdom become clear. The powerful provincial nobles were slowly brought under royal control. Improved conditions were reflected in reclamation works in the Fayyum and temple building at numerous sites. Egyptian armies penetrated into Nubia, a land at that time rich in gold, and the conquest of the region to a point above the Second Cataract was accomplished.

Another obscure period followed and the course of Egyptian history was interrupted by the invasion from Palestine of the Hyksos who established themselves as rulers in the Delta. Although they adopted Egyptian customs, they were never assimilated. About 1620 B.c. a revolt began under a southern prince and ultimately the Hyksos were expelled and Egypt was reunited.

Under the XVIIIth Dynasty, ancient Egypt reached her zenith. This period of the New Kingdom has left its mark up and down the land especially around the capital, Thebes, near the modern Luxor. Abroad the name of the pharaoh was feared in western Asia. The greatest of the conquerors was Thothmes III who established an Egyptian empire in Syria. Egyptian rule was restored and extended in Nubia.

The empire decayed during the reign of Akhenaten (c. 1380–1362), whose religious innovations antagonized the powerful priesthood of Thebes. On his death the old polytheism was restored. The outstanding figure of the XIXth Dynasty was Rameses II (c 1300–1234). He fought the rising power of the Hittites in Syria for twenty years and was both a great builder and a usurper of other men's works.

After him Egypt passed into decline. The XXth Dynasty closed with a long series of insignificant pharaohs and under their successors Egypt was divided between a ruler in the Delta and a priest-king at Thebes. In the eighteenth century B.C. a dynasty originating from Nubia held Upper Egypt and even for a time the Delta. But Egypt was soon to pass under completely alien domination.

EGYPT UNDER FOREIGN RULERS: 671 B.C.-A.D. 640

In 671 the Assyrians conquered Egypt and drove out the Nubian pharaoh. The Assyrians, however, did not long maintain their hold and a native ruler succeeded in reuniting the country. The dynasty which he founded encouraged Greek traders and was supported by Greek mercenaries.

This last native dynasty came to an end in 525, when Persia conquered Egypt. The Persian kings patronized the religion of their subjects and were officially regarded as pharaohs. Darius I (522-485) completed the work of an Egyptian predecessor in cutting a canal linking the Nile and the Red Sea. His successors fought native pretenders to keep Egypt within their empire.

Under Alexander the Great another change of masters occurred. The Persian satrap surrendered in 332 and Alexander was recognized as pharach. His visit to the oracle at Siwa shows his fascinated interest in Egyptian religion, while by founding the city of Alexandria he conferred on Egypt a lasting benefit. After Alexander's death, Egypt fell to his general, Ptolemy. The Ptolemaic Dynasty was Greek in origin and outlook. Its capital was Alexandria, which was in effect a Greek rather than an Egyptian city. Egypt was the private estate of the Ptolemies, who taxed its people through a competent bureaucracy.

When Cleopatra committed suicide in 30 B.C., Egypt passed under Roman rule. Although the emperors were regarded as successors of the pharaohs the country sank into a mere province of a great Mediterranean empire. Egyptian Christianity had a distinctive doctrinal character and, by fostering monasticism, originated an important institution. In the dogmatic disputes of the Byzantine period, the adherence of the Coptic church of Egypt to monophysite beliefs in face of the official theology was a form of national self-assertion.

ARAB EGYPT: 640-969

In the early seventh century two great powers dominated the Middle East the Byzantine empire, and the Sasanian empire of the Persians. In 616 the Sasanian army invaded Egypt but Byzantine supre macy was soon restored Meanwhile a thrd power was arising the Arabs summoned by Muhammad to helief or John.

The Prophets death in 632 was followed by wars against the Byzantines and Sasanians Egypt the granary of the Byzantine Empire soon attracted the Muslim warnors in the reign of the Caliph Umar I an Arah army under Amr ibn al As took the invasion route from Syna The frontier fowns fell after shore sugges and in April 641 the key fortress near the head of the Delta was captured Alexandria the capital surrendered and was evacuated by the Byzantine garnson A camp-city at Al Fusita again in the strategic position near the apex of the Delta became the headquarters of the Sussim army

For some centures Egypt remained an occupied rather than a Muslim country The Copts who dis lited Byzantine rule had not opposed the conquest Under the Arabe they found less oppression and paid lower taxes at first than under Constantinople. In course of time however Egypt became an Arabut spaking country with a Muslim majority Eut to this day the Coptic Christian minority remains and uses the ancent Janquage in its Hurgy.

For over two centures Egypt was administered as a prownee of the Arab Empire By the middle of the ninth century the remoter territories were slipping from the grasp of the Abbasia caliphs of Baghdad Egypt was obviously well fitted to he the domain of an autonomous governor. Two short lived Turkish Dynasties the Tuliands and the Risbiddles ruled in virtual independence of the caliph between 868 and 999 Eath rapidly degenerated after the death of its founder Ahmad inh Tuliun in 877 occupied Syria and thus once again created an empire based on Egypt

THE FATIMIDS AND AYYUBIDS 969-1250

Rehild rule was termanated in 969 by an invasion from Tunisa. Here the rival caliphate of the Fatimide, had been set up by Misslum of the Sha sect who believed that the caliphate could only pass through the direct descendants of Al Misslammad's son in law The fourth of these anti-calipha Al Min 12 was made the master of Egypt by his general Jawhan Jawhan land out a new capital which has developed into the modern city of Cairo and was the founder of the mosque of Al Azhar the greatest centre of Islamue theological learning

Under the early Fatunds Egypt enjoyed a golder, age The country was a well administered absolute monarchy and it formed the central portion of early was a few and included boorth Afraca engine which at its height included boorth Afraca for the control of the co

Soon however Fatund rule began to decay All Halum (965-lo-102) departed from the tolerant polley towards Christians and Jews which was normal in Muslim states The long reign of Al Mustansur (1035-94) witnessed the break up of the Fatund Empire and the growing insubordination of the slave-soldiery After his death the six succeeding Fatund's were playthings in the hands of their ministers and their troops

Meanwhle a new enemy was on the threshold—the Crusaders who after 1098 established feudal Christian states along the Syrian coast Neither the Abbasids nor the Fatirmids were capable of resisting them but in the later twelfth century the tide began to turn The Muslim reconquest of Syria was largely due to the energy and ability of the Kurdish leader Salah al Din al Ayyuh known in European Instory as Saladin In 1176 be became minister to the Fatimid caliph. In 1171 the last Fatimid was quietly deposed and Egypt restored to Sunni orthodoxy The remainder of Saladia i life was a struggle against the crussding states but when be died in 1193 he was sultan over Egyptand practically the whole of the former Crusader territory

Saladin s Empire was divided amongst his hers one branch of which the Egyptian Ayyubda reigned in Cario Dynastic struggles weakened the family and the Crusaders were able to recover some lost ground Louis IX of France led an attack directly on Egypt Damietta was occupied in 1249 but the advance of the Crusaders through the difficult and pestilential Delta was stopped at the battle of Al Mansura in 1250 Louis was made prisoner but subsequently regained his liberty on paying a ransom and restoring Damietta.

THE MAMLUK BULTANATE 1250-1517

During this Criside the Ayyuhd sultan died This was nortually the end of the dynasty After a short confused period the commander of the forces a certain Aybak became the first of the Mainluk sultians who ruled Egypt from 1250 to 1517. These sultains were of slave origin. The Ayyuhda had built up bodyguards of slave troops whose power increased as that of their masters declined. The earher Mambuks until 1350 were mainly of Turkish and Mongol origin while their successors originally the hodyguard of the former were mostly Circassians. The Mambuk sultains did not form a dynasty in the hereditary sense but a caste from which the successive rulers emerged after election or a struggle for power. The ranks of the Mambuks were repleusibled by fresh purchases.

The Mamluks were thus an alien element which was never fully assimilated in Egypt They exploited the land for their own henefit and the Egyptians played a passive role under their domination. Nevertheless they protected Egypt and Syria against the Mongols and the Crusaders' The Mongol threat developed in the middle of the thirteenth century when Hulagu the grandson of Jenghiz Khan advanced through Persia Baghdad was taken and the Abbasid caliphate extinguished in 1258 From Northern Syria the Mongol army advanced sonthwards until at Am. Jalut near Nazareth it was overwhelmed in 1260 by the Mamluk

Sultan, Baibars. Spared from the ravages of the Mongols, Egypt became the principal centre of Arab culture. The change in the centre of gravity of Islam was symbolized when Baibars brought to Cairo an 'Abbasid prince, who was formally recognized as titular caliph.

This victory also ensured that the Mamluk sultans would rule over a combined empire of Egypt and Syria. The remaining pockets of Crusader territory were regained by Baibars and his successors. Baibars also intervened in the affairs of the Christian kingdom of Nubia and virtually established a protectorate.

The numerous mosques and public works of the Mamluk period indicate the wealth of Egypt. But from the middle of the fourteenth century the condition of the country declined owing to plague and civil war, while heavy taxation oppressed all classes of the native Egyptians. Another Mongol invasion under Tamerlane in 1401 devastated Syria, although Egypt itself was again spared. The valuable transit trade through Egypt was subjected to a close monopoly, which diminished its flow. Finally Vasco da Gama's voyage to India around the Cape (1496–99) sounded the doom of Egyptian prosperity. European ships henceforward by-passed Egypt and traded directly with the east, while the Portuguese destroyed the Mamluk fleets and harried Arab shipping in the Indian Ocean, Red Sea and Persian Gulf.

OTTOMAN EGYPT: 1517-1798

At the beginning of the sixteenth century a powerful state was created in Persia under the Safavid dynasty, while Anatolia and the Balkan peninsula were ruled by the Ottomans. The Mamluks were by comparison a declining power and sought by a secret understanding with the Persian Shah to hold their own against the expansionist and militant Ottomans.

In 1516 at the battle of Marj Dabiq north of Aleppo the Ottoman Sultan, Selim I, defeated the Mamluks and advanced southwards. A second battle in January 1517, outside Cairo, resulted in the overthrow of the last Mamluk sultan. The whole of his empire fell into Selim's hands and Cairo sank to a provincial status. The Turkish conquest together with the change in international trade-routes marked the beginning of a period of political and economic insignificance. The great mosque of Al-Azhar retained its primacy among the theological schools of Islam but its teaching was set in a conservative tradition that remained unbroken until the nineteenth century.

Selim recognized the inviduality of Egypt and his successors usually interfered but little with the administration. The Mamluk soldiery and their leaders, the beys, were allowed to continue receiving their revenues. A garrison of Turkish janissaries was stationed in Egypt but in the course of a few generations they became useless as a military force, while constant recruiting from the slave-markets kept the Mamluks in unimpaired yigour. Ottoman governors were appointed but for the most part they were utterly dependent on the Mamluk beys.

From time to time Mamluk grandees were virtually

sovereign in Egypt. The most famous of these was Ali Bey, who ruled from 1761 to 1766, was then driven into exile, but regained power from 1767 to 1772. He made an alliance with a Syrian Arab chief, and contacted a Russian squadron, which was then cruising in the eastern Mediterranean, during the course of hostilities against the Ottoman Empire. A Mamluk force attacked Damascus, and drove out the Ottoman governor, but Ali's general betrayed him, and returned to Egypt. Ali fled to his Syrian friend, but was defeated in an attempt to reconquer Egypt in 1773 and died a prisoner.

Ali Bey's career illustrated the weakness of the Mamluks. They had no roots in Egypt and the Egyptians viewed with indifference their struggles for mastery. Their power to achieve their ambitions was limited by the difficulty of financing their factions and they became unpopular by the extortions which they practised on the native Egyptians. At the end of the century a shock from Europe was to reveal the hollowness of their power.

THE FRENCH IN EGYPT: 1798-1801

During the eighteenth century, the British obtained the chief share of Eastern commerce. With the outbreak of the Revolutionary War between Britain and France, the French decided that the occupation of Egypt and the revival of the transit trade might lead to the disruption of British commerce and the overthrow of British rule in India. Bonaparte landed at Alexandria in July 1798.

His aim was to colonize Egypt, break the Mamluk hold and introduce Western ideas. Although he professed sympathy with Islam, his expedition was essentially inspired by the nationalist and secular ideology of the French Revolution. The Egyptians saw in it a new crusade and Bonaparte's attempts to win support by appeals to Muslim sentiment miscarried.

Defeated in the decisive "Battle of the Pyramids" on July 21st, the Mamluks fled and the sudden collapse of their administration was followed by disorder and pillage in Cairo until the entry of French troops. The following month, however, Bonaparte was cut off from France by the destruction of his fleet by Nelson in the "Battle of the Nile". In September the Ottoman Sultan declared war and news of this, combined with Mamluk intrigues and hostility towards the alien French, led in October to a serious revolt in Cairo, centred around Al-Azhar which was subjected to an artillery bombardment.

Early in 1799 Bonaparte invaded Syria to attack the combined forces of the Mamluks and the Ottomans under the governor of Acre. The latter was supported by a British naval squadron and after besieging Acre for two months Bonaparte withdrew to Egypt, his forces much' reduced by fighting and disease. He repulsed a Turkish landing near Alexandria in July and succeeded in August in getting away to France with a few companions. His army held out until 1801 when a British force, subsequently joined by Ottoman troops, compelled them to capitulate.

The shock to Egypt of the French occupation was great The Mamblak miling caste was inscated, Egyptian Muslim leaders were associated with the administration and consulted on public matters and the Copts were placed on an equal footing with the Muslims The immediate effect was to confuse and irritate Egyptian opinion, but the way to future developments had been opened

The French did not abandon the idea of gaming control over Egypt and their interest in Egyptian flars was maintained French scholars who had accompanied Bonaparte produced monographs which became the basis of modern studies of the country In the hands of Champollion, the Rosetta Stone was to be the key to the hieroflyphs

MUHAMMAD ALI PASHA AND HIS SUCCESSORS: 1805-63

The expulsion of the French was followed by a struggle for power in which the vector was an Albanian effect in the Ottoman forces Muhammad Ali In 1805 be was recognized by the Sultan as Governor of Egypt. In 1807 he defeated a British force which had occupied Alexandra. In 1811 the Manuluk chiefs were massacred in Cairo His prestige was increased by the success of his forces in a campaign in Arabia, undertaken between 1811 and 1818 at the request of the Sultan, against the Wahhabb conqueerors of the Hijaz, led by the family of Saud, who threatened the Tertile Crescent Between 1820 and 1821 his army conquered most of the northern Sudan, the source of gold and slaves

The gaps in his army resulting from these campaigns were made up first by slaves, who were found unsuitable because of their high mortality, and then by the conscription—unprecendented, brutal and unpopular—of native Egyptians. The new army had Turks Albanians and Circassians for officers and was trained by European military instructors.

In 1824 Muhammad Alı sent his son Ibrahim with an Egyptian force to assist the Sultan to suppress the Greek revolt, but European intervention in 1827 led to the destruction of the Turkish and Egyptian fleets at Navarino On the rejection by the Sultan of Muhammad Ah's demand that Syria should be given to him in recompense, Ibrahim invaded that country in 1831 War with the Ottomans followed and Ibrahim advanced into Anatolia A convention in 1833 gave Muhammad Alı the Syrian provinces which were ruled by Ibrahim for seven years as his viceroy A second Ottoman war then broke out and international intervention once again resulted in Ibrahim's defeat Muhammad Ali's dominions were restricted to Egypt and the Sudan but his governorship was made hereditary He died in 1849 having been predeceased by Ibrahim

Within Egypt Muhammad Ali reformed the administration and controlled the national wealth An ambitious educational system was organized under European teachers and Egyptian students were sent abroad, especially to France A press was set up, primarily for the production of textbooks and manuals Towards the end of his reign a Western-damanus! Towards the end of his reign a Western-damanus! Towards the end of his reign a Western-damanus! Towards the end of his reign a Western-damanus! Towards the end of his reign a Western-damanus!

educated class was emerging and the ferment of ideas characteristic of modern Egyptian intellectual life had begun

Muhammad Alı was succeeded by his grandson, Abbas I [1849-54) under whom the westernizing trend was reduced, and he by Said (1854-64), Muhammad Ali's surviving son

THE MAKING OF THE SUEZ CANAL:

During Muhammad Alis reign, Egypt regained importance as a link between Europe and the East The overland route via Alexandria Cairo and Suez, which was improved with the construction of a rail-way by British enterprise, reduced the passage between England and India from five months to forty days. This route was used by passengers and mail hut heavy merchanduse continued to go by the Cape The scheme for a mantime canal, regarded by the British Government as a threat to India, was backed by France hut Muhammad Ah refused to grant the necessary concession, seeing n canal as a threat to the independence he sought

Said proved more plant and in 1845, granted a concession to de Lesseps which included an undertaking to supply labour but which required ratification by the Sulian This was delayed owing to British opposition and work did not begin until 1859 in anticipation of ratification after de Lesseps had gained the support of Napoleon III.

Said was succeeded by Ismail, Ibrahim's son, who inherited something of his grandfather's imagination and his father's energy A his insistence the concession (and particularly the clause concerning the provision of labourly was modified, but he was obliged to pay 43 million in compensation to the Suez Canal Company after the matter had been submitted to the arhitration of Napoleon III The canal was opened with great festivaties.

At first the British Government tried to ignore the canal and none of the 80 noo shares reserved for Britian (one fifth of the total) were bought Ismail, who had originally been allotted 64,000 shares, took up these and others which remained unsubscribed, bringing bis total holding to 182,023 shares Said and Ismail had together paid about £11½ million in connection with the canal which cost approximately £16 million to cut. Ismail was to receive 15 per cent of the net profits in addition to the interest on his shares

THE KHEOIVE ISMAIL AND INTERNATIONAL CONTROL: 1863-81

As part of the Ottoman Empure, Egypt was hound by the Capitulations—treates with European powers giving European communities in Ottoman territories a considerable degree of autonomy under the jurisdiction of their consuls Originally they had applied to small groups of merchants but with the growth of trade with Egypt in the nineteenth century consular protection came to be enjoyed by sixeable foreign communities who were exempt from Egyptian jurisdiction and largely free of Egyptian taxation After prolonged negotiations Mixed Courts, which reduced the scope of consular jurisdiction, were introduced in 1875; these, however, had a majority of European judges and were not insensitive to diplomatic pressures.

Ismail was to deliver Egypt into far greater international control. His ambitions made him careless of financial considerations, and high cotton prices during the American Civil War gave him a false idea of his country's wealth. In 1866 he obtained the title of Khedive. He extended his Sudanese dominions, cut canals, built railways and constructed telegraph lines. No distinction was drawn between the debts of the state and those of the ruler, whose personal expenses were high, and between 1863 and 1876 Egyptian indebtedness rose from £7 million to nearly £100 million. Much of this was in the form of loans from European financial houses at steep rates of interest.

In 1875 Ismail staved off a financial crisis by selling his Suez Canal shares to the British Government for nearly £4 million, a profitable investment by Disraeli who sought to prevent French control. The crisis came in 1876 when Ismail suspended payment of his treasury bills, a declaration of bankruptcy which led to international control. A khedival decree of May 1876 established the "Caisse de la Dette Publique" administered by four foreign members—British, French, Austrian and Italian-to provide for the service of Egyptian debts. When this arrangement proved unsuccessful the French insisted on reform of the fiscal system to provide for repayment of the debts and in 1878 Ismail was forced by France and Britain, in return for a new loan, to surrender his powers and revenues to a ministry, headed by Nubar Pasha, which included a British and a French minister. Ismail chafed under foreign control, aligned himself with Egyptian opposition to it and in May 1879 dismissed the ministry. The French and British Governments retaliated by securing his deposition by the

Ismail was succeeded by his son Tawfik, who, ostensibly, governed through a responsible Egyptian ministry. Strict financial control was exercised, however, by a French and a British controller, and under the law of liquidation of 1880 an international Debt Commission, consisting of two French and two British members together with one German, one Austrian and one Italian, administered 66 per cent of the country's revenue for the benefit of foreign creditors. Furthermore, a maximum was laid down for government expenditure and the Commissioners were empowered to draw on any surplus administrative revenue. Such was the burden laid upon the Egyptian people by Ismail's improvidence.

THE ARABI EPISODE: 1881-82

Meanwhile a nationalist outlook was developing among those classes who had been touched by Western influences, particularly the younger Egyptian army officers whose way to promotion was barred by Turks and Circassians. Liberal reformers led by Cherif Pasha resented Turkish overlordship and wanted a Western-style constitution. Moslem leaders were opposed to the spread of Christian influence.

The great landowners, many of whom were, like the ruling house, Turkish in origin, fought to retain their privileges which were threatened by foreign control. The peasantry, who had been squeezed to pay for Ismail's schemes were being squeezed again to pay his debts. The Khedive, Tawfik, was revealed as a puppet maintained by France and Britain.

By 1881 the country seethed with unrest and a climax was reached in February when, in protest against cuts imposed on the army, a group of officers led by Arabi Pasha forced Tawfik to dismiss his Circassian War Minister. In September, after surrounding his palace, they compelled him to agree to the formation of a new ministry, and to summon the Chamber of Notables, a consultative body originally set up by Ismail. France was opposed to any concession to moderate Egyptian opinion, Britain agreed rather than risk a split with France, and a Franco-British note was sent proclaiming the resolve to maintain the Khedive and the established order.

The effect of the note was to align the Chamber of Notables with Arabi against foreign intervention. In February 1882 Khedive was forced to dismiss the ministry led by Cherif Pasha and appoint a nationalist ministry with a supporter of Arabi as Prime Minister and Arabi himself Minister for War. The Dual Control ceased to exist and, although anxious to avoid sending an expedition to Egypt, the British and French Governments in May sent naval squadrons to Alexandria as a demonstration. On their arrival Egyptian opinion became so inflamed that in June fanaticism took control and riots broke out in Alexandria and other places in which numbers of Europeans were killed.

At a conference in Constantinople neither Germany nor Turkey would support the sending of an expeditionary force and the French Chamber of Deputies refused to sanction French intervention. On July 11th, the Egyptians having refused to cease work on the fortifications of Alexandria, the British squadron bombarded the forts. The town was evacuated by the Egyptian army, while the Khedive placed himself under British protection and subsequently proclaimed Arabi a rebel. The French ostentatiously dissociated themselves from the British action. A British expeditionary force landed at Ismailia and routed the Egyptian army at Tel el Kebir. Cairo was occupied and Tawfik's prerogatives were restored, to be subsequently exercised under British control.

THE RULE OF CROMER AND HIS SUCCESSORS: 1883-1914

The British Government hoped to set Egyptian affairs in order and then to withdraw, but the execution of this policy was frustrated. The Arabi episode had brought Egypt once again to the verge of bankruptcy. Difficulties were increased by a cholera epidemic, a poor Nile, the Mahdist revolt in the Sudan and the unremitting hostility of France. Evacuation was repeatedly deferred and the occupation gradually assumed the character of a veiled protectorate.

From 1883 to 1907 the Egyptian Government was dominated by the British Agent and Consul-General,

Sir Evelyn Baring, who in 1891 became Lord Cromer He was in title only the equal of the other consuls general and British control was established with diplomatic care, German support being canvassed to counterbalance French obstruction A policy of severe economy was necessary to satisfy foreign bondholders In spite of the limitation on his freedom of action. Cromer obtained remarkable results An international convention in 1885 eased the financial strain by permitting a further loan and modifying the rigidity with which Egyptian revenues were assigned British financial advisers brought about increased revenues. solvency was restored and taxation reduced Irrigation works were improved and paid labour replaced the corvée for the annual clearance of the canals The Aswan dam was constructed A new Egyptian army was trained by British officers

In 1892 Tawfik died He was succeeded by his son, Abbas II, who was hardly eighteen at his accession and soon resented Cromer's authority. The possibility of a conjunction between Abbas and a new nationalist movement led by Mustafa Kamil, a young lawyer who had been trained in France, caused the British some anxiety hut the Khedner's attempts to assert immelf resulted in bumiliation which further emhitteed him against Britain. A series of puppet governments preserved a façade of constitutionalism but educated youth turned increasingly to opposition

At the turn of the century Britain gained a freer hand in Egypt The Sudan was reconquered hetween 1896 and 1898 A clash between British and French at Fashoda on the Upper Nile was parrowly averted and the liquidation of this problem led ultimately to the Entente Cordisis of 1904 and the diminution of French opposition in Egypt At the same time senior British Officials, who had mereased in number from about 100 in 1883 to over 1,000 in 1905 were out of touch with the growing strength of national feeling

Cromer was succeeded in 1907 by Sir Eldon Gorst, who managed to establish better relations with the Khedine and adopted an attitude of informality which contrasted with Cromer's proconsular pomp On his death in 1911 be was followed by Lord Ritchener who, as conqueror of the Sudan was treated with more deference than had been grudgingly accorded to Gorst and whose arrival marked a return to more autocratic methods Nevertheless a Legislavire Assembly was created in 1913 which provided a platform from which the voice of nationalism could make itself heard with constitutional propriety, and it is to the credit of Birtish rule throughout this period that the press was uncensored and the expression of opinion free

THE FIRST WORLD WAR AND ITS CONSEQUENCES: 1914-22

After Turkey entered the First World War m November 1914 on the side of Germany Egypt, still nomnally a province of the Ottoman Empire was declared a British protectorate and Britain assumed responsibility for the defence of the Suez Canal On December 20th Abbas II was deposed and the British Government offered the title of Sultan to Husain Kamil the brother of Tawfik When Husain died in 1917 be was succeeded by his brother Fuad

Under the protectorate the combination of British and Egyptian officials in the administration continued Kitchener was succeeded by Sir Henry McMahon, the first High Commissioner, and he in turn was succeeded in 1977 by Sir Reginald Wingate, who had served in the Egyptian army under Kitchener and bad since 7800 been Governor General of the Suda.

The Constantinople Convention of r888 provided that the Suce Canal should be 'always free and open, in time of war as in time of peace, to every vessel of commerce or war without distinction of flag" but, by a blockade against enemy slupping outside the three mile limit covered by the Convention, Britain was able to deny the use of the Canal to enemy shipping

The pressure of multary necessity was moreasingly felt by the Egyptians Martial Iav, censorship, the dearth of officials of good quality, the forcible recruitment of labour and the requisition of animals for the advance into Palestine, rung prices and profiteeing all combined to intensity opposition to the protectorate The nationalist movement, antagonistic to both the Britsh administration and the Sultain fed on popular discontent and at the end of the war, in November 1918, a delegation, beaded by Saad Zagbul, presented Wingate with a demand for authority The British Gavernment a refusal to deal with the nationalists and the deportation of Zagbul and three of his sacciouse resulted in riota and numbers early in 1919 and order had to be restored by military

Wingate who had given warning of the danger, was superseded by Allenby fresh from his successful campaign against the Turks Allenby made overtures to Egyptian opinion and Zaghlul and his friends were released, only to fail to get a hearing at the Peace Conference and to be rebuifed by the recognition of the British protectionate by the United States Known now as the Wald [to Delegation), they set to work to organize support in Egypt and boycotted the British mission under Lord Milner, sent to report on the situation Britain was prepared to negotiate a treaty in exchange for the abolition of the protectorate and discussion between Milner and Zaghlul subsequently took place in Paris After incting further unitest in Egypt Zaghlul was again decorted, however

On February 28th, 1922 the British Government ssued a declaration unlaterally announcing the abolition of the protectorate and the recognition of Egypt as an independent sovereign state Four matters were absolutely reserved to the discretion of the British Government; pending the conclusion of negotiated agreements These were the security of the communications of the British Empire in Egypt, the defence of Egypt the protection of foreign interests and of minorities in Egypt, and the Sudan interests and of minorities in Egypt, and the Sudan

In March 1922 the Sultan Fuad, took the title of King of Egypt and in April a committee was set up to draft a constitution

THE TRIANGULAR STRUGGLE: 1922-39

The period after the declaration of independence saw a triangular struggle in Egypt between the King, the Wafd and the British Government. The Wafd was organized to carry out a revolution, not to direct affairs of state. The King owed his throne to the British and his presence guaranteed their interests, yet obvious subservience to them might have enabled the Wafd to rob him of his throne.

The new constitution, which made Egypt a parliamentary monarchy on the Belgian model, was promulgated in 1923. The Wafd triumphed in the elections which were then held and Saad Zaghlul became Prime Minister for a brief period in 1924. In the succeeding years political instability continued as the struggle for power between the Wafd and the throne went on. Elections usually gave the Wafd a majority but a Wafd ministry was unacceptable to King Fuad and in this he normally had the concurrence of the British Government. Hence Palace influence was predominant in the ministries appointed and at times legislation had to be enacted by decree. In 1928 the Parliament was suspended for three years, in 1930 modifications were made to the constitution which altered the electoral law, but in 1935 the original provisions were restored and in elections the following year the Wafd again obtained a majority. The month before the elections King Fund had been succeeded by his son, Farouk, a minor. The new Prime Minister was Nahas Pasha, who had led the Wafd since Zaghlul's death in 1927.

Until 1936 negotiations for an Anglo-Egyptian treaty invariably broke down over questions of defence and the Sudan. The continued presence of British troops was regarded by Egyptians as denying the reality of independence. The Egyptians also felt that they had been ousted by Britain from dominion over the Sudan and control over their water supply. When the Governor-General of the Sudan was assassinated in Cairo in 1924, Allenby demanded the withdrawal of Egyptian troops from the Sudan, and also the unlimited extension of the irrigation of the Sudan Gezira. Although these demands were later modified, the Egyptian share in the Condominium was to remain nominal.

In 1929 the Nile Waters Agreement allotted the respective shares of Egypt and the Sudan, to Egypt's advantage. The deadlock over a treaty ended in 1936 when the rise of Italian power threatened British and Egyptian interests alike. On August 26th an Anglo-Egyptian treaty of twenty years duration was signed which formally terminated British occupation but empowered Britain to station forces in the Suez Canal zone until the Egyptian army was in a position to ensure the security of the Canal. The Sudan was to continue to be administered as in the past. The protection of foreign interests and of minorities in Egypt was recognized as the exclusive responsibility of the Egyptian Government. The abolition of the Capitulations was seenred by the Convention of Montreux in May 1937. In the same month Egypt was admitted to the League of Nations.

THE SECOND WORLD WAR AND ITS CONSEQUENCES: 1939-52

In the Second World War Egypt was a vital strategic factor as the British base in the Middle East. Her treaty obligations were fulfilled but the ruling classes were by no means committed to the Allied cause and on occasions popular support for Germany became manifest. Nevertheless the presence of British forces ensured co-operation.

The young King Farouk, who had assumed full royal powers in 1937, was a popular national figure but as determined as his father to avoid domination by the Wafd. Although still the dominant political party, the Wafd was losing its revolutionary fervour and its appeal to youth was diminishing. Fascist influence appeared in the Greenshirt organization, while the Muslim Brotherhood, a puritanical religious body, developed a terrorist wing and threatened the established authorities.

The critical year was 1942. Alamein had not yet been fought, the King was disposed to appease the Axis powers and the government was under Palace influence. The Wafd, however, favoured co-operation with Britain. In February the British Ambassador, supported by an armed escort, entered the Palace and insisted on the formation of a Wafdist government. Threatened with deposition, Farouk acquiesced and Nahas Pasha became Prime Minister and Military Governor of Egypt.

Nahas held office until 1944. During this period Nuri al-Said, the Prime Minister of Iraq, and King Abdulla of Transjordan separately put forward proposals for a union of Arab states in the Fertile Crescent. These were opposed by Egypt as they seemed to favour Iraqi hegemony. Nahas took the initiative, proposing a broader league of Arab states, and a conference was held which in October 1944 produced the Alexandria Protocol. On this the Arab League was founded the following year. From the beginning Egypt held a position of leadership in the League, which was bitterly hostile to the idea of establishing a Jewish state in Palestine. Previously, preoccupied with her own national problems, Egypt had shown little interest in the Palestine problem.

By 1944 the danger to Egypt had passed. Nahas was no longer indispensable and his government fell, discredited by co-operation with the British and by the corruption which had flourished during its tenure of office. The struggle between the Wafd and the Palace revived. Communism, made attractive, especially among students, by the Russian successes in the war, gained new adherents, and the Muslim Brother-hood continued its subversive activities.

Negotiations in the immediate post-war years for a new treaty with Britain broke down over the questions of the British occupation of the Canal Zone and the future of the Sudan. A provisional agreement concluded between Ernest Bevin and Sidki Pasha in 1946 proved abortive owing to Sudanese resentment at a reference to "the unity between the Sudan and Egypt under the common crown of Egypt". The British

Government affirmed its intention that the Sudanese should freely decide their own future status. In 1949 Nokrashi Pasha submitted the Egyptian case to the United Nations where the problem was shelved.

In Palestant Britain's renunciation of the Mandate on May 14th, 1948, was followed immediately by the declaration of the State of Israel and multiary action by Egypt. Iraq Syris and Jordan The Egyptian army was badly defeated Although the fact was long corealed from the Egyptian public, it eventually recoiled on the ruling classes. The King's early popularity had vanished, multiary failure and the seandal of the supply of faulty arms, in which members of the Palace clique were implicated, undermined the loyalty of the army, which was his last support.

The fall of the discredited regime did not come immediately The Communists, although widespread lacked the means to capture the administration A terrorist campaign by the Muslim Brotherhood was suppressed and the organization driven underground in 1949 Nahas, again in power, made a last bid for royal and popular support in 1951 by abrogating the Treaty of 1936 and the Condominium Agreement and proclaiming Farouk "King of Egypt and Sudan" New British proposals on the Sudan were rejected, as also were proposals on defence, involving the creation of an Allied Middle East Command with Egyptian participation, put forward jointly by Britain France, Turkey and the United States Terrorism and economic sanctions were then employed in an attempt to force the withdrawal of British forces from the Canal Zone Clashes occurred resulting in many deaths, and on January 26th, 1952, an anti British demonstration in Cairo developed into noting, looting and a conflagration, brought to an end only by army intervention

THE REVOLUTION: 1952-56

On July 23rd, 1952, a group of young army officers, the "Tree Officers", who had long been planning a cut d'ital, seized power in Cairo They invited the veteran politican, Ali Maber, to form a government under their control, and sectured the abdication of King Faronk in favour of his mifant son, Ahmed Fual II, on 1914 76th Faronk sailed to exile

General Mubammad Negmb, an associate of the Free Officers who bad incurred the entity of King Fatorik and who had eather made himself popular by his condemnation of the British action in 194z, was made Commander in Chief of the armed forces and head of the military junta A Council of Regency was formed in August On September 7th, after an attempt by the Wald and other partners to resume the political battle on their own terms, a new cabinet with General Negmb as Frime Minister was substituted for that of Ali Maher Real power, however, lay with the nine officers who formed the Revolutionary Command

The Revolution soon gained momentum. In September 1952 land ownership was limited to 300 acres many one family and the power of the feudal class which had for so long dominated Egyptian political life was destroyed. Land owned by the royal family was con-

fiscated On December 10th the constitution was abolished and on January 16th, 1953, all political parties were dissolved It was announced that there would be a three-year transition period before representative government was restored On June 18th the monarchy was abolished and Egypt declared a republic, with Negulo as President and Prime Musister as well as Chairman of the Revolutionary Command Council Colonel Gamal Abdel Nasser, who, although leader of the Free Officers, had intherto remained in the background, became Deputy Prime Munister and Minister of the Interior, and Abdel Hakun Amer was appointed Commander in Chief of the armed forces

A revolutionary court was set up and a number of persons, including the old politions most identified with the fadines of the Palestine campaign, were tried aimd much publicity, on charges of corruption and opposition to the new regime Action was taken in-volving widespread arrests and defentions to suppress two potential sources of opposition to the revolutionary government the Communists and the Muslim Brotherhood.

A struggle for power soon developed between General Neguib, whose personal tendencies were Islamic and conservative, and Colonel Nasser On February 25th, 1954, Neguib was relieved of his posts as President, Prime Minister and Chairman of the Revolutionary Command Council and accused of having attempted to concentrate power in his own hands Nasser became Prime Minister and Chairman of the Revolutionary Command Council in his place for a few days but Negurb was restored as President and took back both the other posts. He announced that elections would be held for a constituent assembly, martial law and press censorship were abolished and freedom for political parties was restored Opponents of the regime, including Nahas and Al Hudaibi, the leader of the Muslim Brotherhood, were released from prison Nasser, bowever, supported by both the army and newly formed workers' organizations, was able to regain the premiership and the chaumanship of the Revolutionary Command Council in April, Neguib bad suffered a defeat and his liberal measures were rescinded. When in October a member of the Muslim Brotherhood attempted to assassinate Nasser, its leaders and several thousand alleged supporters were arrested and in subsequent trials a number of death sentences were passed On November 14th, 1954 General Neguib was relieved of the office of President and accused of being involved in a Muslim Brotherhood conspiracy against the regime He was placed under bouse arrest and Colonel Nasser became acting bead of state

A settlement of the Sudan and Suez problems had been facultated by the expulsion of King Farouk The claim to the joint monarchy of Egypt and the Sudan was dropped and negotiations with Sudanese leaders were helped by the fact that Negurb himself was balf-Egyptian agreement, signed on February 12th, 1933, ended the Condomnium and offered the Sudanese the thoate of independence or union with Egypt Egyptian.

expectation that they would choose the latter was disappointed; the overthrow of Neguib and the suppression of the Muslim Brotherhood fed the century-old suspicion of Egyptian motives.

An Anglo-Egyptian agreement on Suez was signed on October 19th, 1954; this provided for the withdrawal of British troops from the Canal Zone within twenty months. Certain installations were to be maintained by British civilian technicians and the Egyptian Government would assume responsibility for the remainder of the base. The base might be reactivated by Britain in the event of an armed attack by an outside power on any of the Arab League states or Turkey. The agreement recognized the international importance of the Suez Canal (which was described as "an integral part of Egypt") and expressed the determination of both parties to uphold the 1888 convention.

Under Nasser Egypt began to assert her importance in world affairs. He sought influence in three circles: the Islamic, the African and the Arab, and his visit to the Bandung conference in 1955 added a fourth: the "non-aligned". Egypt led the opposition among certain Arab states to the Baghdad Pact (on which was founded the Central Treaty Organization). In October 1955 Egypt concluded defence agreements with Syria and with Saudi Arabia and in April 1956 a military pact was signed between Egypt, Saudi Arabia and the Yemen. Tension with Israel remained high, and raids and counter-raids across the border of the Gaza Strip called for unceasing vigilance on the part of the United Nations observers stationed on the frontier. In September 1955 Nasser announced an arms deal with Czechoslovakia which was to supply large quantities of military equipment, including Soviet tanks and aircraft, in return for cotton and rice. In July 1956 he had talks with Marshal Tito of Yugoslavia and Pandit Nehru of India and subsequently maintained close relations with these two countries.

In 1956 a constitutional basis for Coloncl Nasser's authority was established. A new constitution providing for a strong presidency was proclaimed in January and on June 23rd approved in a plebiscite in which the citizens of the Egyptian Republic also elected Nasser as President.

THE SUEZ CRISIS AND ITS CONSEQUENCES: 1956-57

President Nasser's policy of non-alignment, which implied willingness to deal with both power blocs, was followed in the Egyptian attempt to obtain funds for the ambitious High Dam project at Aswan. By this project the Egyptian Government aimed to increase cultivable land and generate electricity for industrialization, which was seen as the main solution to Egypt's increasing population problem. Following offers of assistance from the United States and Britain and, separately, by the U.S.S.R., the International Bank for Reconstruction and Development offered a loan of \$200 million in February 1956, on condition that the United States and Britain lent a total of \$70 million and that the agreement of the riparian states

to the scheme was obtained; Egypt was to provide local services and material.

The last British troops were withdrawn from Egypt in June 1956, in accordance with the 1954 agreement. Relations with the West were not helped, however, by Egyptian opposition to the Baghdad Pact and strong propaganda attacks on Britain, France and the United States. On July 20th the United States and Britain withdrew their offers of finance for the High Dam, pointing out that agreement between the riparian states had not been achieved and that Egypt's ability to devote adequate resources to the scheme was doubtful. The U.S.S.R. made no compensating move. On July 26th President Nasser announced that the Suez Canal Company had been nationalized and that revenue from the Canal would be used to finance the High Dam.

Britain, France and the United States protested strongly at this action and after an international conference had met in London in August a committee under the chairmanship of Mr. Menzies, the Prime Minister of Australia, went to Cairo to submit proposals for the operation of the Canal under an international system. These were rejected by the Egyptian Government. At a second London conference, in September, a Suez Canal Users' Association took shape and was later joined by sixteen states. On October 13th the UN Security Council voted on an Anglo-French resolution embodying basic principles for a settlement agreed earlier between the British, French and Egyptian Foreign Ministers in the presence of the UN Secretary-General. The first part of this, setting out the agreed principles, was adopted unanimously; the second, endorsing the proposals of the first London conference and inviting Egypt to make prompt proposals providing no less effective guarantees to users, was vetoed by the U.S.S.R.

Britain and France, thus frustrated in their attempts to retain some measure of control over the Suez Canal, at this state reached a secret understanding with Israel involving military action. Following the disclosure on October 24th that a unified military command had been formed by Egypt, Jordan and Syria, Israeli forces on October 29th crossed into Sinai, ostensibly to attack Egyptian fedayeen bases, and advanced towards the Suez Canal. On October 30th France and Britain called on Israel and Egypt to cease warlike action and withdraw their forces from either side of the Canal; Egypt was requested to agree to an Anglo-French force moving temporarily into key positions at Port Said, Ismailia and Suez. Israel agreed but Egypt refused. The same day in the UN Security Council Britain and France vetoed United States and Soviet resolutions calling for an immediate Israeli withdrawal and calling on all UN members to refrain from the use of force or the threat of force.

Anglo-French air operations against Egypt began on October 31st but paratroops and seaborne forces landed in the Port Said area only on November 5th. Meanwhile, on November 2nd, the UN General Assembly called for a cease-fire and two days later adopted a Canadian proposal to create a United Nations Emergency Force to supervise the ending of

the hostilities On November 6th, following heavy United States pressure, the British Prime Minister, Sir Anthony Eden, announced that, subject to confirmation that Egypt and Israel had accepted an unconditional cease fire, the armed conflict would end at mainth.

The organization of the UN force was rapidly put in hand by the Secretary General, Mr Hammarshold, and the first units reached Egypt on November 15th The withdrawal of the Anglo-French forces was completed the following month The Israelis who had occupied the entire Sinai pennisula withdrew from all areas except the Gaza strip, which they wished to prevent becoming a base for more raids and Sharm el Sheikh at the entrance to the Gulf of Aqaba, which commanded the seaway to the port of Ediat These areas were returned to Egyptian countrol in March 1957 after pressure on the Government of Israel by the United States

The Suez Ganal, which had been blocked by the Egyptians was cleared by a UN salvage fact and reopened at the end of March 1937. The Egyptian Government rejected in February a plan proposed by Britain France, Norway and the United States, for the Canal to be operated by Egypt but the folls collected by an outside agency. The Egyptian terms, announced on March 18th, which users of the Canal were subsequently obliged to accept, were full control by the Egyptian Canal Authority and respect for the Constantinople Convention of 1838. Disputes would be settled in accordance with the UN Charter or referred to the International Court of Justice.

UNION OF EGYPT AND SYRIA

Elections to the Egyptian National Assembly, provided for in the 1936 constitution, were held in July 1937 Colly candidates approved by President Nasser and has colleaques were permutted to stand and it was clear that the 350 members elected (who included women) were not expected to exert nuch nifuence on the government The first sitting of the assembly was held on July 22nd against the background of the duclosure of an alleged plot to assarsante President Nasser in April In a speech to the assembly the President menhande with favour the idea of a federation between Egypt and Syria

Following the defence agreement in 1955 discussions had been beld the following year and in 1957 on union between the two states. Both countries were aligned against the West and looked to the U.S.S.R. and other Communist states for support, and in Syria pro-Egyptian elements were in the ascendant On February 1st, 1958, following a visit to Cauro by President Quwaity and other Syrian leaders, the union of Egypt and Syria under the title of the United Arab Republic (U.A.R.) was announced Both parhaments formally approved the union on February 5th and seventiem principles on which the constitution of the U.A.R. would be based were proclaimed A Piebrasic, beld in both countries on February 2sts, confirmed the union and made Nasser the first President of the United Arab Republic.

Under the provisional constitution issued on

March 4th the President was head of state and supreme commander of the armed forces. He was authorized to appoint four Vice-Presidents, a Cabinet and an Assembly of 400 members, at least half of whom were to be drawn from the parliaments at Cairo and Damascus The President could convene and dissolve the Assembly, the chief functions of which were to approve government laws and decisions, and be could himself legislate when it was not sitting. The two Regions of Egypt and Syria were each to have an Executive Council, appointed by the Pradient by the Desident, was to replace ensuing political parties and to mobilize efforts to build the nation on a sound hasss.

The implementation of the union took time. The four Vice-Presidents and the two Executive Councils were appointed in March 1958. A central government, consisting of fourteen Egyptians and seven Syrians, was established in Cairo in October 1958. Four committees, dealing with legislative, executive, economic and public service matters were set up to advise the President In October 1959. Fresident Nasser appointed one of the two Egyptian Vice-Presidents, Field-Marshal Abdel Hakim Amer, as supervisor of general policy in the Syrian region, all Ministers of the Syrian Executive Council were made responsible to him and be was to preside over the council

Electoms for the local committees of the National Union were held in both Egypt and Syria in July 1959 one representative being returned for every 500 electors The Union was a pyramial organization, with committees at various levels beaded by President Nasser Newspapers and publishing houses were placed under its control by a decree usned by President Nasser in May 1960, journalists being obliged to obtain keenes from it In June 1960 separate congresses of the National Union were held simultaneously in Egypt and Syria at which deputies to the National Assembly were nominated They were followed by the first general congress of the National Union in Cain at which does not be not only in Egypt and Syria at which deputies to the National Assembly were nominated They were followed by the first general congress of the National Union in Cain at which over 500 policy resolutions were defaulted.

The first National Assembly of the UAR was opened in Caro by President Nasser on July 21st, 1960 It consisted of 400 depaties from Egypt and 200 from Syria appointed by bim from candidates nominated by the National Union Over half the deputies were former members of the dissolved national assembles of Egypt and Syria Early in 1961 the President entrusted the National Assembly with the task of drawing up a permanent constitution for the UAR

EXTERNAL RELATIONS: 1958-S1

During this period President Nasser was actively concerned with changes in the rest of the Arab world

An invitation was extended to other Arab states to join the new Union and in March 1958 the U A.R. and the Yemen entered into a loose association referred to as the United Arab States under which separate governments were to be maintained but policies coordinated through a supreme council This association.

did not prosper, however, and was terminated by the U.A.R. in December 1961.

The reaction of the Hashemite monarchies of Iraq and Jordan to the new relationship between Egypt and Syria (both of which had been accused of complicity in an attempted coup d'état in Jordan in 1957) was immediately to form a federation themselves, styled the Arab Union. This was subjected to U.A.R. propaganda attacks which stigmatized its formation as a hostile move inspired by the West. It did not survive the revolution in Iraq in July 1958.

In the Lebanon, where the government of President Chamoun was attacked by U.A.R. propaganda for pro-Western policies but where popular opinion was sympathetic to the U.A.R., a serious insurrection occurred in May 1958. The government alleged infiltration of arms and men from Syria into rebelcontrolled areas and appealed to the UN Security Council which sent observers.

The military revolution in Iraq in July, in which the royal family and the Prime Minister, Nuri al-Said, were murdered, destroyed the only Arab regime in the Middle East to have identified itself explicitly with the West. The immediate dispatch of American troops to the Lebanon and British forces to Jordan drew strong protests from the U.A.R. which were echoed by the U.S.S.R. The U.S.A. and Britain gave warning of the grave consequences of any conflict between their forces and those under the control of Egypt and Syria. President Nasser visited Moscow and on his return received in Damascus a delegation from the new republican regime in Baghdad. A joint communiqué on July 19th declared that the U.A.R. and Iraq would assist each other to repel any foreign aggression. A United Nations resolution sponsored by Arab states in August, which welcomed assurances that they would refrain from action calculated to change each other's system of government, prepared the way for the withdrawal of the British and American forces.

A conference at Damascus in February 1959, attended by Jordan, the Lebanon, the U.A.R. and Saudi Arabia, led to the settlement of differences between Syria and the Lebanon, where the neutralist General Chehab had succeeded President Chamoun.

U.A.R. propaganda voiced support for a revolt which broke out at Mosul in Iraq in March 1959, and there were mass demonstrations in Cairo and Damascus in sympathy with the rebels. The Iraqi Government of General Kassem countered with the accusation that the revolt had been engineered from Syria. The political committee of the Arab League met at Beirut in April in an attempt to reduce the prevailing tension but Iraq took no part in the principal activities of the League until 1960 when relations with the U.A.R. improved.

Diplomatic relations between the U.A.R. and Jordan, severed at the time of the Iraqi revolution, were resumed in August 1959, but there were further violent propaganda exchanges in 1960, the U.A.R. criticizing Jordan for continuing to accept aid from Britain and the United States and Jordan accusing

the U.A.R. of complicity in the assassination of the Jordanian Prime Minister in Amman.

Agreement between Egypt and the Sudan on the sharing of the Nile waters after the completion of the Aswan High Dam was reached in November 1959 and a trade and customs convention was also signed.

President Nasser's hostility to the West found favour with the U.S.S.R., with which the U.A.R. established closer ties during these years. He made a state visit to Moscow in the spring of 1958 and in a joint communiqué on May 15th endorsed the broad objectives of Soviet policy whilst the U.S.S.R. declared support for Arab unity. Purchases of arms, military aircraft and industrial equipment were made from the Soviet Union at favourable prices and three submarines were bought from Poland. Soviet aid for the construction of five airfields and for industrial projects in Egypt was announced in December 1958 and the same month an agreement was concluded which ensured Soviet assistance for the building of the Aswan High Dam. Nevertheless, President Nasser was not inhibited from denouncing Communist activities in the Syrian region and from taking measures to circumscribe them. Work on the first stage of the High Dam began in January 1960 and it was announced that the U.S.S.R. had agreed to participate in the second stage, due to begin in 1962. Soviet assistance for shipyard construction at Alexandria and for industrial projects, including steel and engineering plants, irrigation schemes, and oil, chemical, food and textile enterprises, was announced early in 1960.

Relations with the West improved during 1959 and 1960. Through the mediation of the International Bank for Reconstruction and Development an agreement with Britain was signed on March 1st, 1959, providing for the payment by the U.A.R. of £27½ million as compensation for British private property taken over at the time of the Suez crisis in 1956. Diplomatic relations with Britain were resumed at chargé d'affaires level in December 1959 and raised to ambassadorial level early in 1961. A \$56.5 million loan from the International Bank was announced in December 1959 for improvement to the Suez Canal. Financial aid agreements between the U.A.R. and the U.S.A. were signed in March 1960, providing for the supply of surplus U.S. farm products and loans totalling \$32.5 million for economic development.

SYRIAN WITHDRAWAL FROM U.A.R.

President Nasser replaced the two Regional Executive Councils and the Central Cabinet of the U.A.R. with a single Central Government in August 1961. By this time, however, the increasing subordination of Syria was breeding resentment and the issue of decrees in July of that year nationalizing most large-scale industrial and commercial concerns had provoked further Syrian discontent. Colonel Seraj, a Syrian Vice-President of the U.A.R., resigned on September 26th and en September 28th the Syrian army seized control in Damascus and Syria withdrew from the U.A.R. President Nasser at first called for resistance to the Syrian coup d'état but, when the rebels were seen to be in firm control, said on October

5th that he would not oppose recognition of Syna's independence

The loss of Syna was a bitter blow to President Naser and his Egyptian colleagues who now set about a re-examination of their policies. In a speech on October 16th Naseer spoke of the illusion that "reconclisation with reaction on a patriotic basis" was possible. "Reaction" had infiltrated into the National Union which must be converted into." a revolutionary means for the national masses alone", the machinery of the state must be reorganized. Measures against "reactionaries", including arrests and the sequestra toon of property, were announced three days later expropriations by the end of the year affected nearly 1000 persons who included Syrians and Lebaness.

The U.A.R Government (Egypt retained the full title) was re-formed on October 18th and a National Congress of Popular Forces, consisting of 1,750 delegates, representing not geographical areas but economic and professional interests and other social groups, met in Cairo on May 21st, 1962 President hasser presented the National Congress with a draft National Charter outlining his programme for developing the UAR on Arab socialist lines The Charter states that impenalists must be evicted, the power of feudalists destroyed and state control of finance and industry established. A new democratic system of government was proposed, based on the Arab Socialist Union (replacing the National Union) and including popular councils at least half the members of which would be workers of fellahin The President emphasized the need to increase the national moome and stressed the importance of birth control to contain the alarming growth in the population As for inter-Arab relations, the Charter placed "unity of objectives before unity of ranks". The National Congress approved the Charter on June 30th and then dispersed

MORE ATTEMPTS AT UNION

Syran complaints of Egyptian interference in ber internal affairs provoked angry exchanges at a meeting of the Arab League Council in August 1962, as a result of which the U.A R boycotted all League activities and withdrew financial support until the downfall in March 1963 of the regime which had brought about Syrai's secsion Normal Telations were then resumed

The Syrian coup d'état had been preceded by the overthrow in February 1963 of the regime of General Kassem in Iraq These changes in power branght Syna and Iraq into closer alignment with Egypt and it was announced on April 17th that agreement had been reached on the formation of a federation of the three countries under the name of the United Arab Republic During the first two years government was to be in the hands of a President and a Presidential Council of six members from each country It was widely expected that a referendum to be held with five months would give Colonel Nasser the post of President with wide powers Rivairies, however, arose in both Baghdad and Damascus between supporters of the Baath Party and "Nasserists" and by August President Nasser had withdrawn from the agreement,

claiming that the Baathists had set up one-party dictatorships in Syria and Iraq and ignored his maistence on wider nationalist representation

A month later President Ani of Iraq called for a Banthust union of the three countries, but after the expulsion of Saath leaders from Iraq an November to the consolidation of power in Ani's hands the musty movement between Iraq and Syna fell apart and Iraq and Egypt again moved closer together An agreement was concluded on May 25th, 1964, to establish a joint Presidency Conneil, constitute of the two Presidents and six members from each country, with a secretariat and committees in Cairo A United Political Command was set up in December 1964 to hiring about political unity and co-ordinate foreign policy, the armed forces, national security, economic planning and education unitical

The first meeting of the United Political Command was bild in Cairo in May 1965 but the succeeding year saw little progress towards unity in Iraq an attempted coup against President Arti, by the Prime Minister, Abdul Razzaq (who subsequently took refuge in Cairo), and elements favouring immediate and complete union with Egypt, failed Visits to Cairo were made by the new Iraqi Prime Minister, Dr Bazzaz, in October 1965 and by President Arti the following February, but the United Political Command did not meet again until March 1966 There were signs that this Iraqi Government preferred a looser relationship with Egypt to the integration favoured by Iraqi "Nasserstis" Suspicions of Egyptian intentions were strengthened in June 1966 when Abdul Hazzaq attempted a second coup, which also failed but which provided endence of Egyptian complicits.

President Nasser took an important initiative in Arab League affairs following the announcement by Israel in 1963 of her intention to take water for urigation purposes from the River Jordan where it runs through Lake Tiberias Neighbouring Arah states had for a number of years refused to agree, on political grounds, to the planned use of the Jordan waters and Israel had proceeded unilaterally with a major project At President Nasser's invitation a conference of Arab heads of state met in Cairo in January 1964 to discuss what should be done to counter the Israeli move This Arab summit conference recommended Arab diversion of the Jordan headwaters, and at the same time agreed that Arab states should follow a policy of "live and let live" among themselves

A second Arab summt meeting, beld in Alexandra in September 1964, deeded that a dam should be built on the Yarmuk River, a tributary of the Jordan forming the border between Jordan and Syria, and an irrigation scheme developed in Jordan A fund would be established to strengthen the armies of Syria, the Lebanon and Jordan over the next five years against possible Israeli reprisals The UAR, Saudi Arabia, Libya Morocco and the Yeinen were to make annual financial contributions for this purpose and the three armses were to have a unified command under the Egyptian General Ali Amer, although movement across the frontiers of finefully states was not to be an across the frontiers of finefully states was not to be an

automatic right. A further £E r million was set aside for the formation of a Palestine Liberation Organization.

The Arab reconciliation and presentation of a united front lasted until the spring of 1965. Iraq, Kuwait, Yemen (Republic), Algeria and the Lebanon continued to follow President Nasser's lead, only Syrian critics complaining that U.A.R. policy was not sufficiently anti-Israeli. U.A.R. relations with Jordan improved strikingly and, after a conference of heads of Arab governments in Cairo in January 1965 to discuss co-ordination of Arab policies, King Hussein, previously the object of U.A.R. attacks and derision, himself paid a visit to Cairo. State visits to Cairo were made by President Bourguiba of Tunisia in February and King Hassan of Morocco in March. Only King Faisal of Saudi Arabia remained aloof, seeing the presence of Egyptian troops in the Yemen, in support of the republicans in the civil war which had begun in 1962, as evidence of U.A.R. expansionism and a threat to the Saudi position as the dominant power in the Arabian peninsula.

The general atmosphere of cordiality was shattered in April 1965 by President Bourguiba who criticized Arab policy on Israel as unrealistic and suggested negotiation with Israel on the basis of the 1947 UN partition plan (which would have involved Arab recognition of Israel, Israeli withdrawal to the borders proposed in the plan and the return of the Palestinian Arab refugees). This was attacked by the U.A.R. as a betrayal of the agreement at Alexandria in 1964 that the Arabs should work in concert. Further statements by President Bourguiba, who was not supported on this issue by any other Arab state, were followed by riots in Cairo and Tunis and the breaking of diplomatic relations with U.A.R.

At the third Arab summit conference, at Casablanca in September 1965, President Nasser found himself on the defensive, in the face of charges made by President Bourguiba (who did not attend the conference) of attempting to dominate the Arab world and interfering in the internal affairs of other Arab states. The conference re-emphasized the need for Arab solidarity and called upon Arab countries not to interfere in each other's domestic affairs by encouraging subversive movements or by attacks in the press.

In the Yemen, despite Egyptian support, the republican regime seemed no closer to victory over the royalists, who held the mountainous regions of the north-east and were assisted by Saudi Arabian finance and supplies of arms. This military stalemate and the financial burden of maintaining some 50,000 troops in the Yemen moved President Nasser to attempt to disengage. On August 24th, 1965, after a two-day conference at Jeddah, he and King Faisal reached agreement on a peace plan to end the civil war. A cease-fire was to be declared immediately, a national conference of Yemeni leaders was to meet to form a provisional government, Saudi Arabia was to cease supplying arms to the royalist forces, and Egyptian troops were to be withdrawn by November 1966.

The conference of republicans and royalists at

Haradh in November 1965 ended in deadlock, however, owing to republican intransigence, and the Egyptian troops remained in the Yemen. On February 22nd, 1966, the day the British Government announced that British forces would leave Aden and South Arabia when that territory became independent in 1968, President Nasser stated that Egyptian troops would not be withdrawn until the revolution in the Yemen could "defend itself against the conspiracies of imperialism and reactionaries".

CHANGES OF INTERNATIONAL ALIGNMENT

The years 1964 and 1965 saw a deterioration of U.A.R. relations with the West and increasing dependence on the Soviet Union.

Relations with the United States were adversely affected by U.A.R. support for the Stanleyville rebels in the Congo during the winter of 1964-65, and following the airlift of Belgian paratroops in U.S. aircraft in the Stanleyville rescue operation the U.S.I.S. library in Cairo was burned down. This led to an embargo by the U.S. Government on supplies of surplus wheat, badly needed by the U.A.R., from December until 1965. Diplomatic relations with Britain, already worsened by Egyptian encouragement of dissident elements in South Arabia, were severed by the U.A.R. in December 1965 over the Rhodesia issue, in common with eight other members of the Organization of African Unity. The new elasticity of Gaullist policy led to improved relations between the U.A.R. and France, however, and in 1965 official visits were exchanged and French financial aid was made available.

With West Germany relations deteriorated after the discovery of an arms agreement between that country and Israel. When in February 1965 the East German Premier, Herr Ulbricht, visited the U.A.R., where he was accorded full honours, West Germany reacted by stopping further economic aid to the U.A.R. and entering into diplomatic relations with Israel. In retaliation the U.A.R. broke off diplomatic relations with West Germany, as did the other Arab states except Libya, Morocco, and Tunisia, and in May 1965 agreed to establish diplomatic relations at consular level with East Germany. In June 1969 the relationship was elevated to full ambassadorial status.

Relations with the U.S.S.R. had been strengthened in May 1964 when the Soviet Premier, Nikita Khruschev, made a sixteen-day visit to Egypt. The Egyptian and Soviet leaders, accompanied by President Arif of Iraq, attended the ceremony marking the completion of the first stage of the Aswan High Dam, being built with Soviet aid. President Nasser paid his third visit to the U.S.S.R. in August 1965 and (Khruschev having been overthrown) the new Soviet Premier, Alexei Kosygin, visited the U.A.R. in May 1966, expressing support for U.A.R. policies and again demonstrating Soviet interest in the Middle East.

DOMESTIC TROUBLES

Although President Nasser obtained over 99 per cent of the votes cast in the presidential referendum

in March 1965, there were subsequently more signs of discontent in the U.A.R. than at any time since he had come to power In a speech to Arab students during his visit to Moscow in August 1965, he disclosed that a plot against his life had been discovered Widespread arrests were later made and changes in the Ministry of the Interior were announced. In the this which followed, in which the accused included about 200 members of the banned Muslim Brutherhood seen persons were sentenced to death, and many others to long terms of imprisonatent, for plotting to assassinate Nasser and overthrow his government.

In September 1965 a new government headed by Zakaria Mohieddin replaced that of Ali Sabri, who became Secretary General of the Arab Socialist Union Thereafter, administrative changes were made and the security system was tightened up Taxation was increased and measures of retrenchment were introduced because of increasing economic difficulties particularly the acute shortage of foreign exchange United States wheat supplies were continued, credits from France, Japan and Italy and a loan from Kuwait were obtained and there were increased drawings from the International Monetary Fund Nevertheless the level of imports, particularly food to feed the growing population, and the debt service burden resulting from the first five-year plan caused a con timum drain on foreign exchange reserves and the U A.R. faced a balance of payments crisis A mission from the International Bank for Reconstruction and Development, which visited Cairo in January 1966, subsequently made recommendations for stabilization and missions of Egyptian bankers and finance officials visited Western countries including Britain, to dis cuss credits and debt repayment. The second five year plan was revised and extended over seven years and President Nasser gave public warnings that sacrifices were necessary in every field as Egypt lacked the foreign currency to pay for imports. He refused however, to abandon the expensive commitment in the Yemen Zakarıa Mohieddin's replacement in September 1966 by Sidki Soliman (a technocrat who retained his post as Minister of the High Daml was seen as the outcome of disagreement over retrench ment measures When the U.A R defaulted on repay ments due to the International Monetary Fund in December 1966, the country was seen to be on the verge of bankruptcy

WIDENING RIFT WITH SAUDI ARABIA

The year 1966 saw a rapprochement between the U.A.R and Syrua A trade, payments and technical co-operation agreement was concluded in July and on November 4th a five-year joint defence agreement was signed. This provided for a joint defence council and a joint command, military operations being under the overall control of the U.A.R. Chief of Army General Staff and stated that armed aggression against either country would be considered as **aggression against both

The rift between the UAR and Sandi Arabia widened President Nasser in February 1966 expressed opposition to an Islamic grouping which King Faisal

was promoting and in the succeeding months propaganda warfare between the two countries was intensfied. In the middle of the year the President gave notice that he would not attend an Arab summit conference with Saudi Arabia and Jordan, both of whom he stigmatized for obtaining British and United States military aid, and called for the indefinite postponement of the conference planned for September A majority of Arab states agreed, but in October Tinnisa broke off relations with the UAR over continued differences on Arab League policies,

In the Yemen Leyptian forces had been withdrawn from northern and eastern areas and concentrated in the triangle between Sana's Hodeida and Taiz Egyptian control over the republican armed forces and administration was increased and when in September 1966, after President Sallal had returned to the Yemen from a year a sheence in Cauro the republican Prime Minister, Hassan al-Amin, and seven senior members of his cability to visited Egypt to make a plae for greater independence, they were arrested and detained there The following month about 100 senior Yemen officials were dismissed and airests and executions were carried out

In November 1966 Egyptian aircraft carried out raids an Saudi Arablan villages near the Yemen border. In Jannary 1967, after air attacks with bombs and rockets on royalist-held areas in the Yemen, the village of Klint was bombed and over 100 deaths cansed, allegedly, by poison gas

February 1957 saw the closing of two Egyptian banks in Sault Arabia and the seizure of Sauda property (including King Faisals) in the UAR In the same month, following President Naiser's accusation that Jordan and Sauda Arabia were "lackey and reactionary regimes" serving the interests of impenal ism and allied with the Nuishim Brotherhood in Egypt, the Jordanian ambassador was withdrawn from Carro

WAR WITH ISRAEL

The events of May 1967 were to transform the Middle East scene There had been an increase of Syrian guerrilla activities in Israel during the previous six months and on April 7th the tension had led to fighting in the Tiberias area in which six Syrian aircraft had been shot down Israeli warnings to the Syrian Government culminating on May 12th in the threat by Premier Eshkol of severe reprisals if terrorist activities were not controlled evoked Syrian allegations that Israel was about to mount a large scale attack on Syna President Nasser, who had been reproached for not aiding Syria in the April fighting in accordance with the mutual defence agreement responded immediately, moving large numbers of troops to the Israel border, He secured the dissolution of the UN Emergency Force, whose presence on the Egyptian side of the frontier depended on Egyptian permission and re-occupied the gun emplacement at Sharm el Sheikh on the Straits of Tiran He later justified these steps by claiming that he had received Syrian and Soviet warnings that Israeli troops were concentrated on the Synan border (an allegation subsequently disproved by reports of UN truce observers) and an invasion of Syria was imminent.

When on May 23rd President Nasser closed the Straits of Tiran to Israeli shipping, thereby effectively blockading the Israeli port of Eilat, his prestige in the Arab world reached an unparalleled height. Britain and the United States protested that the Gulf of Agaba was an international waterway; Israel regarded the blockade of the Straits as an unambiguous act of war. A British attempt to produce a declaration by the maritime powers on freedom of passage through the Straits met with little enthusiasm when it became clear that only by force would the blockade be lifted. As tension increased, with frequent belligerent pronouncements from Arab leaders and the threat by President Nasser that any aggressive act by Israel would lead to an all-out battle in which the Arab aim would be Israel's destruction, King Hussein of Jordan concluded a mutual defence pact with the U.A.R. which was immediately joined by Iraq. Gestures of support were made to Nasser by all Arab leaders, including President Bourguiba and King Faisal.

On the morning of June 5th Israel launched largescale air attacks on Egyptian, Jordanian, Syrian and Iraqi airfields and Israeli ground forces made rapid advances into the Gaza Strip, Sinai and western Jordan; there was also fighting on the Israeli-Syrian border. The outcome was decided within hours by the air strikes, which destroyed the bulk of the Arab air forces, and the Israeli ground forces were everywhere successful. By June 10th, when all participants had accepted the UN Security Council's call for a ceasefire, Israeli troops were in control of the Sinai peninsula as far as the Suez Canal (including Sharm el Sheikh), the west bank of the Jordan (including the Old City of Jerusalem), the Gaza Strip and Syrian territory extending twelve miles from the Israel border. The Suez Canal was blocked by Egypt in the course of the fighting, and Britain and the United States were falsely accused by President Nasser and King Hussein of giving air support to Israel. The allegation was withdrawn by King Hussein a few days later but not before an embargo had been applied by the oil-producing Arab states against Britain and the United States, and also the Federal Republic of Germany.

On June 9th, the day after he had accepted the cease-fire, President Nasser announced his resignation in a speech in which he assumed full responsibility for the nation's plight, but the following day, in response to huge street demonstrations of popular support, he agreed to continue in office. A number of senior army officers were immediately replaced and on June 19th Nasser took over the duties of Prime Minister and Secretary-General of the Arab Socialist Union.

The implications of the catastrophe were only gradually realized. It was estimated that the loss of revenue from the Suez Canal, from oil produced in Sinai and from tourism amounted to some £12.5 million a month, or almost half Egypt's foreign currency earnings. Also, the withdrawal of a large part of the Egyptian force in the Yemen reduced Nasser's ability to influence affairs both in that

country and in Aden and South Arabia (which became independent as the Republic of Southern Yemen on November 30th, 1967, after the withdrawal of British troops).

The Soviet Union, which had given the Arab cause strong verbal support throughout the crisis, continued to take a strong pro-Arab stand at the United Nations and President Podgorny paid a lengthy visit to Cairo to discuss future Egyptian policy. Although the Soviet resolutions were rejected in both the Security Council and the General Assembly, Soviet assistance took the more concrete form of quickly replacing about half the lost Egyptian aircraft and providing other military supplies. By the end of October it was estimated that about 2,500 Russian military instructors had been sent to Egypt. Despite this military aid, Soviet leaders seemed anxious to discourage hopes of a resumption of hostilities, however. Further economic assistance was also offered by the Soviet Union and in May 1968 an agreement was announced for the construction of a steel complex at Helwan.

Israel demanded direct negotiations with the Arab states for a peace settlement but the fourth conference of Arab heads of state, held in Khartoum at the end of August 1967, decided against recognition or negotiation with Israel. At this conference, in which Syria did not participate, it was agreed that the embargo on oil supplies to Western countries should be lifted, that the Suez Canal should remain closed until Israeli forces were withdrawn, and that Saudi Arabia, Kuwait and Libya should give special aid of £95 million a year to the U.A.R. (and also £40 million a year to Jordan) until the "effects of the aggression" were eliminated. King Faisal and President Nasser announced their agreement on a peace plan for the Yemen under which Egyptian troops were to be withdrawn within three months and Saudi Arabia was to stop supplying the royalists; the withdrawal was subsequently completed by December (and President Sallal was deposed by republican leaders in November).

In October, following repeated violations of the cease-fire by both Egyptian and Israeli forces in the Suez Canal area, Egyptian patrol boats sank the Israeli destroyer Eilat off the Sinai coast; Israel replied with an artillery bombardment of Egyptian oil refineries and other installations at Suez, causing such extensive damage that Egyptian oil had to be sent to Aden to be refined. The Security Council condemned all violations of the cease-fire and on November 22nd adopted a British resolution laying down principles for a just and lasting peace in the Middle East and authorizing the appointment of a special UN representative to assist in bringing about a settlement. Mr. Gunnar Jarring was appointed the following day and subsequently had separate discussions with Israeli and Arab leaders, including President Nasser, which continued at various times throughout 1968 and into 1969.

U.A.R. AFTER THE JUNE YAR

Meanwhile President Nasser faced day inting economic difficulties and a disturbed politic, al situation in

Egypt An austerity hudget bad been framed in July 1967 The cost of re-equipping the armed forces forced a cut in investment, in spite of Soviet aid and assistance from other Arab governments Socialist policies were still followed, as was shown by the decision to nationalize the wholesale trade, announced in October The continuing shortage of foreign exchange made desirable an improvement in the U.A R's relations with the West and in December diplomatic relations with Britain were resumed A hridging loan from British, West German and Italian banks, obtained in February 1968, enabled the UAR to make the repayments to the International Monetary Fund which had been due since the end of 1966, and in March the IMF approved further drawings Another hopeful development was the increased production of oil from Egyptian oilfields, which made up for the loss of Sinai

As a result of the multary débacle the Egyptian army was subjected to major reorganization, involving the dismissal of large numbers of officers. The reaction of Field-Marshal Abdel Hakim Amer was to plan a coup d'état, but his intentions became known His arrest, together with other senior army officers, on August 30th was followed by the arrests of a former Minister of the Interior, Abbas Radwan and the chief of the central intelligence department. The suicide of Amer was announced by the UAR Government on September 15th At the end of October senior officers of the air force were put on trial and in February 1968 the former air force commander was imprisoned for fifteen years, other senior air force officers also received prison sentences. In January 1968 the armed forces supreme command was reorganized

Widespread demonstrations of students and workers took place in Cairo, Helwan and other main centres, towards the end of February. Initially, in protest at the lenency of sentences on air force officers, they revealed widespread popular distilusion and discontent to a degree unprecedented since the revolution of 1952 A number of persons were killed in clashes with police and the universities were closed, nevertheless President Nasser realized the need for immediate conclustory action. Re-trials were ordered and sweeping cabinet changes announced, a number of civilian experts in various fields being brought in Ali Sabry. who had been reinstated as Secretary-General of the Arab Socialist Union in January, was also included but Zakaria Mohieddin left the government President Nasser continued to exercise the functions of Prime

On March 10th President Nasser ambounced a new plan for building a modern state in Egypt based on democracy, science and technology. The single party would remain but there would be free elections from top to bottom of the Arab Socialist Union and changes were promised among leaders in all spheres An announcement of the distribution to the people of land taken over by the state or reclaimed was made on April 6th In a ple-insect on May 2nd the "Declaration of March 20th" was overwhelmingly approved The first Arab Socialist Union elections were held an Jinne, the 75 coopersons obsess then elected a national

congress in July, this in turn chose a central committee which then chose the party's higher executive. These proceedings however, did not appear to arouse much public interest. President Nasser dissolved the UAR National Assembly on November 14th and elections for a new Assembly were held on January 8th 1969.

November 1968 saw further student nots, resulting in many injuries and some deaths, in Alexandria and Mansoura. The universities were again closed Although these disturbances were officially attributed to the activities of an Israel; agent airested by the police and to indignation at the continued occupation of Sima by Israel; forces, they were seen by many observers as further evidence of frustration with the restrictions imposed by President Nasser's government and of distillusion with its performance, particularly in relation to Israel Moreover, in uncertain bealth, his popularity dimunished, the President appeared in 1968 to be increasingly isolated and exposed

Deprived of foreign exchange by the continued closure of the Canal and the drop in the tourst trade, the UAR remained dependent on the regular aid payments from Saudi Arabia, Kuwait and Libya and on Soviet assistance, both bumilating to a people strongly nationalist in outlook There were signs that the civilian economic ministers favoured some relaxation of over-rigid state control in industry and more encouragement in private enterprise and foreign investment. Multary expenditure in 1968 and 1969 remained high Soviet arms deliveries continued, as also did the presence of about 3 000 Russian military advisers and instructors.

Twn heavy exchanges of artillery fire across the Suez Canal in September and October 1968, reportedly begun by U A R forces in an effort to raise Egyptian morale, were followed by an Israeli airborne commando raid some 230 kilometres north of Aswan in which a bridge over the Nile and an important transformer station at Nagh Hammadi were senously damaged The oil refinery at Suez, shelled by Israeli guns in October 1967, remained out of action and the greater part of the population of Suez, Ismailia and Port Said were evacuated Despite these reverses the U.A.R. Government showed little sign of changing its stance on the Arab-Israel question Even if it had wished to do so it would have been hampered by the popular support shown in Egypt and elsewhere in the Arah world for the Palestinian guernilas, the fedayeen, whose activities against Israel were attracting much publicity In fact, in a speech to the National Assembly on January 20th, 1969, President Nasser said that the UAR unconditionally placed its resources at the disposal of the fedayeen

The efforts of Dr. Jarring, the representative of the UN Secretary-General, to bring Israel, the UA R. and Jordan closer together bad, by the end of 1968, yielded hitle success In April 1969, following initiatives by the US S R and France, those two countries together with Britain and the United States, as permanent members of the Security Council, began talke at the United Nations in New York in an attempt to promote a settlement These talks, after a recess

between July and December 1969, were resumed in December 1969, but no settlement was reached.

In December 1969 President Nasser attended an Arab Summit meeting at Rabat, the capital of Moroceo. Differences between the Arab leaders hindered collaboration and the meeting ended without any communiqué being issued. After the ending of the summit meeting President Nasser met the leaders of Libya and the Sudan in Tripoli, and at later talks in Cairo produced plans for military and economic co-operation between the three countries. In February 1970 President Nasser met with the leaders of Jordan, Syria, Sudan and Iraq in Cairo, where they affirmed anew "their determination to liberate violated Arab territories".

Against the background of these developments, artillery exchanges across the Suez Canal began again in March and April 1969. Two Egyptian commando raids on Israeli positions were made in April and were followed by another, less successful, Israeli raid on bridges, the barrage and transmission lines in the Nagh Hammadi area. This pattern of sporadie action involving artillery duels, commando raids and also air combat continued throughout 1969 and into 1970, with growing Soviet involvement in Egypt's defence. In the summer of 1970 the U.S. Secretary of State, Mr. William Rogers, put forward a set of proposals for solving the continuing Middle East crisis. After lengthy negotiations and a visit by President Nasscr to Moscow, both Egypt and Israel agreed to a 90 day cease-fire in August, 1970. Talks between the U.A.R. and Jordan on the one hand and Israel on the other began later in August in New York under the guidance of the UN mediator Gunnar Jarring. They soon broke down following accusations from both sides of violations of the cease-fire agreement, but despite this the ecase-fire was renewed, on its expiry, for another three months. In February it was renewed for only thirty days, and at the beginning of March the U.A.R. allowed it to lapse altogether. But fighting did not break out again. Although Egypt began preparing for war, and, for example, formed a military union with Syria, she also maintained her diplomatic efforts to secure a basis for peace negotiations, which in the spring and summer of 1971 centred on various proposals for reopening the Suez Canal as a first step

By then a number of important political changes had taken place in the U.A.R. and Palestine. The

Palestinian guerrilla movements had been subdued in Jordan in September. Although President Nasser had had his differences with them over their rejection of the U.S. peace proposals and the hijackings of the western airliners at the beginning of September, one of his last acts was to secure agreement in Cairo between King Hussein and Yassir Arafat for an end to the fighting between the Jordanian army and the guerrillas. Nasser's death made it easier for the Jordanian Government to proceed with crushing the remaining commando bases throughout the rest of 1970 and the first half of 1971.

By mid-1971 also President Sadat was firmly in control of the government of Egypt, and had gone some way to filling the enormous gap which the death of President Nasser on September 28th, 1970 inevitably ereated in the leadership of the Arab world A close associate of Nasser and Vice-President at the time, Anwar Sadat was immediately appointed provisional President by the Cabinet and Party, and was later elected President in a national referendum. In November President Sadat (whose mother is Sudanese) agreed to the federation of the U.A.R. with Sudan and Libya. Sudan, however, later postponed her membership of a union, and it was Syria who in April became the third member of the federation. The terms initially proposed for the federation were subjected to lengthy debate by the Arab Socialist Union Central Committee and had later in the month to be amended with the approval of the other two states. The federation proposals together with Sadat's plan for the reopening of the canal precipitated a crisis in the leadership which led to a comprehensive purge by Sadat of opponents at all levels of the government. Ali Sabri, one of the two Vice-Presidents, was the first to go, on May 2nd, just before U.S. Secretary of State, William Regers, arrived in Cairo. Sabri had strong pro-Moscow leanings, and apparently opposed the reopening of the eanal. On May 13th President Sadat, convinced of an impending coup, dismissed six other ministers. Important party and National Assembly members were also dismissed. In July new elections were held not only for all levels of the party, but also for trade unions and professional bodies. In addition a committee set up to draft a permanent state eonstitution was due to submit proposals to a national referendum during August.

K.G.M.

ECONOMIC SURVEY

The Egyptian economy has been functioning under war conditions since 1907 Temporary measures taken to deal with the emergency have gradually turned anto permanent fixtures. The Suez Canal remains closed Sunai, with its oil fields remains under enemy occupation the important urban centres of Port Saud Ismailia Suez Port Fuad and Port Tewfik have had to be evenuated after suffering much damage from enemy shelling vital economic targets such as the refinense and petro-chemical complex at Suez and power transmission lines have heen bit an internal reiges problem has developed in the Canal area tourism is at a low ebb and expenditure on the war effort constrains that on development.

The new difficulties coming on top of chronic economic ills would bave crippled the economy were to not for the emergence of a number of unforescen factors. These include generous and from communist countries with whom trade ties have strengthened still further some promising oil discoveres made in co-operation with western interests direct financial assistance from the oil rich countries of Kuwait Libya and Saudi Arabia and perhaps also higher efficiency inspired by the atmosphere of cemergency.

In normal circumstances official data about the economy tended to lag one or two years behind events and for obvious reasons the lag has been growing wider However in spite of the present meetited conditions the U.A.R. economy shows many structural features which are unlikely to undergo fundamental change except over the long run and these receive special attention in the present survey.

QENERAL

The total area of the UAR is about 1 000 000 square km but 50 per cent of the country is desert. With no forested land and hardly any permanent meadows or pastures the arable land available is greatly over-crowded. Relating the population numbering 33 million in 1970 to the inhabited area a density of 956 persons per square km emerges (nearly 55 persons per acre of arable land) representing one of the highest man/Jand ratios in the world At the root of Egypt spoverty be sits expanding population which advances at about 2 6 per cent annually (Only recently did the government decide to launch a major campaign for burth control) In 1956 according to figures published by the IMF income per head was £E32 equivalent to \$189.

Despite this low level of meome certain aspects of the Egyptian economy indicate a relative state of advance but over population still tends somewhat to neutralize the effects of social and economic progress Among the comparatively advanced areas of the Egypt an economy are the infin structure of communications the irrigation system pubble administration and education Although the illiteracy rate remains high (the 1960 population census showed an illiteracy rate of 69 ppt cent among people of over ten years of age) both secondary and higher education are unite developed and Egypt is a net exporter of skills especially to other Arab countries The diet of the average Egyptian is poor and contains little animal protein but average calorie intake exceeds requirements by a comfortable margin During the 1018 39 period when the Egyptian pound was tied to sterling and a fairly free trade policy was being pursued manufacturing industry had little chance of developing and agricultural production though ex panding could not keep up with the rapidly rising population A gradual deterioration of living stand ards set in This trend did not change direction until the immediate post war period when cotton prices improved These reached their greatest heights during the Korean boom of 1951-52 when soft currency cotton including Egyptian cotton enjoyed high premia over dollar-cotton But the collapse of the boom the easing up of the world dollar scarcity and the beginning of American subsidization of cotton exports in the mid fifties marked a turning point in raw cotton terms of trade which until quite recently showed a declining trend

The regume which assumed power in 1932 and ended the monarchy gave urgent attention to Egypt's economic prohiems. Its policies included measures of agraman reform fand reclamation the High Dam and a programme of industrialization which was accelerated in 1960 by the formation of a comprehensive social and economic development plan.

Egypt's first five year plan aimed at increasing real national income by 40 per cent between 1960 and 1965 this being advertised as the first lap of a ten year programme to double real national income by 1970 The five-year growth target was virtually fulfilled so that the second lap was initially replaced by a more ambitious plan to double real income in seven years (1e by 1972) Lack of finance however frustrated this new plan and after two years of uncertainty a three year accomplishment plan beginning July 1967 was proclaimed This was to aim at a target growth rate of 5 per cent per annum (compared with 72 per cent under the first five year plan) with a total investment of £E1 085 million (against £E1 513 million in 1960-65) and would concentrate on completing projects already started rather than initiating new ones This plan was dropped as a result of the 1967 war and has been substituted by annual development appropriations (£E320 million in 1968-69 and £E350 million in 1969-70) Apart from a few select new projects the whole emphasis of Egyptian planning bas turned towards rationalizing the existing industries and Introducing incentives to improve their per formance Late in 1969 however a five year plan covering the period 1970-75 was outlined with total investments of £E2 500 million

The development budget for 1971-72 was set at £5345 mill on and was presented as a means to raise GDP in real terms by 5 per cent At the time it was announced that £514628 million had been allocated.

for the development of manufacturing industry in the public sector during the period 1970-75.

In the present conditions of warfare it is difficult to forecast the future development of the Egyptian economy (or indeed of the economies of the whole Middle East). Without the Palestinian conflict, the Egyptian economy, which has often shown unexpected resilience in the past, would have come very near to realizing self-sustained growth by the end of the present decade. Besides the large scale waste of resources, the conflict may well lead to the development of a new ideology in the entire area.

AGRICULTURE

Under the impact of industrialization the structure of the Egyptian Economy has been changing, and the relative contribution of agriculture to the domestic product, once predominant has been declining. According to the Egyptian Ministry of Planning, in 1965–66 agriculture generated 29.5 per cent of GDP, industry and mining 22.3 per cent, electricity and construction 5.6 per cent, communications and storage 9.5 per cent, and other services 33 I per cent. In some respects, however, agriculture remains the leading sector of the economy, employing about 60 per cent of the labour force and earning, through cotton exports, most of the country's foreign exchange.

The entire arable land available is just under 6 million feddans (one feddan=1.038 acres). The extension of this area through reclamation has been slow difficult and costly. The increasing pressure of people on the land has led to an intensification of cultivation almost without parallel anywhere. Dams, barrages, pumps and an intricate network of canals and drains (in 1960 there were 25,000 km. of canals and 13,000 km. of drains) bring perennial irrigation to almost the whole area. The strict pursuit of crop rotation, lavish use of commercial fertilizer and pesticides, and the patient application of manual labour, not only make multiple cropping possible, but also raise land yields to exceptionally high levels. In 1969 the IBRD agreed to provide a long-period low-interest loan of \$25 million to finance the construction of 15 new draining stations sustaining a system of covered drains to serve an area of 40,000 feddans in the delta.

As the yields of land are already very high, increased use of manual labour, or practically any other means of production with the exception of land, encounters rapidly diminishing returns. Since the expanding industrial sector, with its use of modern capital intensive techniques, can offer relatively few opportunities for increased employment, the incidence of both unemployment and under-employment in the economy at large is likely to grow as the economy advances, at least for some time. In spite of the steady flow of workers from agriculture to the cities (where 40 per cent of the population lived in 1966, and where employment is far from full), agriculture is still suffering from a surfeit of unnecessary labour. In 1959–60 the Planning Commission estimated that out

of a total of 4,220,000 persons engaged in agriculture (excluding dependent female labour), no less than 975,000 were completely redundant. The growth of redundant labour is a constant threat to labour productivity, not only in agriculture, but also in manufacturing industry and service activity. Emigration out of Egypt has recently intensified, but the number of people involved (several thousands every year) is relatively small. The emigrants, however, tend to be highly qualified professionals whom the economy can ill afford to lose.

The bulk of agricultural production is intended for the market place and not for subsistence. Nearly threequarters of agricultural income comes from field crops. the remainder deriving from fruit, vegetables, livestock and dairy products. Long-staple cotton is the most important field crop; it absorbs a great deal of the available labour, occupies about a quarter of the arable land and provides up to 40 per cent of the value of field crops and 50-60 per cent of the proceeds of visible exports. Rice is another important crop which occupies an increasing area (1.3 million feddans or 546,000 hectares in 1968) with improving yields. In 1968 2,586 million tons of rice were cropped and 546,000 tons exported at a value of £E44.9 million. By 1969 Egypt had become the world's fourth largest rice exporter with exports amounting to 772,300 tons valued at £E55.3 million or 17 per cent of all exports. Other grain crops grown include wheat, maize, millet and barley, of which in 1969 production amounted to 1.3 million tons, 2.4 million tons, 0.8 million tons and o.1 million tons, respectively. Population pressure has resulted in Egypt becoming a net importer of cereals, mostly wheat, cereals and milling products imported in 1969 cost £E39.8 million.

Another high-yielding crop is sugar-cane (6.1 million tons were produced on an area of 155,000 feddans in 1968), which feeds an expanding sugar industry, supplying the bulk of the national requirements. Other crops include lucerne, a nitrogen-fixing fodder, beans, potatoes and onions. The last two crops, in particular, have become significant export items (onions and garlic brought in £E9.5 million in export proceeds in 1969). The many kinds of fruits, vegetables and horticultural products grown are capable of great expansion and are potentially important as exports. (In 1968 nearly 600,000 tons of citrus fruits were produced.) Recently attention has been given to animal breeding in an attempt to raise dairy and meat production. Egypt has become a net importer of meats, and since June 1967 meat consumption has been restricted.

Egypt is the world's principal producer of long-staple cotton, followed by Sudan and Peru. Many factors combine to give the high yields and excellent quality of Egyptian cotton. Among these should be mentioned climatic, soil and labour conditions, and a long experience with careful planting, watering and picking. Government assistance, which has increased of late, has always been important. The development of new varieties, seed distribution, area selection, timing of farm operations and marketing are all carried out

under strict government supervision. Fertilizers and pesticides have long been distributed through the government sponsored Agricultural Credit Bank. lately converted into a public organization, more recently this task has been undertaken by government administered agricultural co operatives which are multiplying and expanding their area of activity By 1963 all the cotton groning industry and the cotton exporting business had been nationalized. The cotton exchanges were closed and the government guarantees prices to regulate internal trade. A public organization for cotton has been set up to regulate all aspects of cotton growing, marketing and manufacturing Total cotton exports in 1969-70 (season beginning August) were 1,469 000 bales (of 478 lb net each), and the value of raw cotton exports in 1969 was (Ergo 7 million, equivalent to some 43 per cent of total export proceeds Estimated production in 1970-71 is 2 35 million bales-the same as in the previous season—equivalent to about 41 per cent of world pro duction Yields per acre 709 lb in 1969-70 compared with 441 in the United States

Egypt produces about 40 per cent of the world crop of long-staple cotton (11in and longer) although this latter percentage fell to 33 in 1969-70 Demand for this type of cotton has been shifting away towards man made fibres, a fact which bas tended to weaken Egypt's previous position of pre-eminence, and coa sequently the premua Egyptian cotton commanded over rival cottons In the past the government attempted to reduce cotton production to gain monopoly profits in the export markets but the result was a drastic loss in market shares. Consequently all restrictions on cotton cultivation have been ahandoned save for rotational purposes and for safeguarding food supplies. For many years the government has operated a system of price supports and the farmers find cotton cultivation highly profitable. The shortage of land, however, together with the increasing requirements of the domestic textile industry (190 000 tons in 1968-69 or 44 per cent of production) set a hunt on the quantity available for export. It is noteworthy that average annual exports of raw cotton from Egypt have remained roughly constant over the trend since the turn of the century when population was less than a third of its present level

About half of Egypt's cotton exports has gone to Communist countries in recent years under various bilateral agreements This proportion dropped suddenly in 1967/68 (to 38 per cent) possibly to allow Egypt to earn foreign exchange in the West, but went back to 47 4 per cent in 1968-69 Egyptian preference for trading with the Western countries with which Egypt has a balance of payments deficit has tended to be frustrated by a number of factors, including US trade restrictions (on raw cotton imports), the decline of the high grade sections of the European cotton industries, political considerations and shortage of finance The availability of credits (to finance imports) from the Communist countries and the flexibility with which these countries conduct their relations with the UAR, have also tended to divert Egyptian foreign trade eastward

AGRARIAN REFORM

Immediately after the Egyptian Revolution of 1952 an experiment was started of land reform which has been quite successful Among other measures, a limit of 200 feddans was imposed on individual ownership of land This limit was lowered to 100 feddans in 1961 and again to 50 feddans in 1969. The primary arm of this reform was the destruction of the feudal power of the old politicians, an aim which was easily realized In 1932, 5 8 per cent of all landowners held 64 5 per cent of the total area, but only a quarter of the national acreage (some 1 5 million feddans) was in plots of over 100 acres each By 1961, however, this area had dwindled to about I million feddans, nearly all of which has been appropriated by the Ministry of Agrarian Reform and redistributed to landless peasants. The 1969 land reform has affected a further I 13 million feddans owned by some 16 000 landowners All three stages of land reform therefore have caused the redistribution of 40 per cent of all land, leaving unchanged the main ownership structure of the remaining 60 per cent Other measures of agranan reform included rent control, the regulation of land tenure, consolidation of fragmented holdings for production purposes, and the drive to build co-operatives. Under government supervision both the number and activities of agricultural co operatives increased By 1963 there were 4,897 such co-operatives (compared with 1,727 in 1952) which offered more than £E46 millions in loans to 920,000 borrowers. The value of services provided by the agraman reform co-operatives (set up to help the recipients of land under the land reform programme) increased more than fivefold between 1958 and 1965 and the activities provided covered the supply of seeds, sacks fertilizer, insecticides and pest control machinery However, co operatives have not been a complete success since they readily lent themselves to corruption. Also in the process of dispossessing the large landowners and promoting co-operatives, the authorities unwittingly helped to eliminate many highly efficient mediumsized farmers On balance, however, the redistribution of land was accompanied by improved land productivity and not the reverse It is necessary to bear in mind the fact that since land reform affected only about one-sixth of the total land the main structure of land-ownership remained unaffected, in 1965 5 4 per cent of the owners still held 49 3 per cent of the land while 94 6 per cent of the owners shared the other half But the average ownership of the first group was only 1805 feddans, and the national average, 1 95 feddans The fundamental land tenure problem was not so much one of distribution but an overall scarcity

With this picture of obvious land shortage, it was natural that special attention be paid to increasing the arable area. In view of the fact that the land to be reclaimed is often and desert, reclaimation is a costly process requiring substantial capital outlays and the question has to be asked whether new investment should not be directed to the development of manu-

facturing industry instead, where returns to the scarce capital may well be higher.

THE HIGH DAM

The decision to invest more than £E400 million in the High Dam project (including initial Russian credits of £E113 million, supported more recently by another loan of £1281 million for the later stages) was, therefore, taken with an eye also on the development of cheap hydro-electric energy for industry. The project was started in January 1960, completed in July 1970, and officially inaugurated in January 1971. From 1964 onwards various parts of the project matured, but all work ceased when the last of the twelve turbines in the dam's power station had been installed. The station's generating capacity, at 10,000 million kWh., exceeds by a considerable margin the 6,012 million kWh. produced in all Egypt in 1967 mostly from thermal stations with some hydroelectric energy from the old Aswan dam. Transmission lines earry the current from the Dam site to Cairo and further north, and a major scheme aiming at the eomplete electrification of Egypt's villages has already started. The storage lake behind the dam, which is 500 km. long and 10 km. wide, is the centre of a developing fishing industry which is expected to replace the sardine eateh in the Mediterranean, lost as a result of building the dam.

As much as 144,000 feddaus were reclaimed annually in the period 1960-65; by 1972 another 1.2 million feddaus are planned to be reclaimed and 700,000 feddaus have already been converted from basin (i.e. eultivated once a year) to perennial irrigation. By 1980 a total of 465,000 feddaus will have been reclaimed in the Nubariyya region including 300,000 feddaus with Russian assistance. The Public Organisation for Desert Development is also carrying out an ambitious programme of land reclamation in the Western Desert with the help of underground water. Despite all these activities the man/land ratio is unlikely to improve in the foresecable future in view of the rapid growth of population.

MANUFACTURING INDUSTRY

Excluding the early 19th century attempts at industrialization, the history of Egypt's manufacturing industry may be said to begin with World War I. Isolation and increased demand gave rise then to a number of small-scale industries, but many of these had to close down in the face of foreign competition during the 1920s when international trade was resumed. When the commercial treaties holding Egypt to a virtually free-trade policy came to an end in 1930, a protective tariff was established to give slielter to a widening spectrum of nascent industry. The establishment of Bank Misr, and the group of companies it supported in the twenties, coincided with a rising tide of Egyptian nationalism and it became patriotic to buy Egyptian industrial products. A number of manufacturing industries, mainly entering for domestic consumption and with cotton textiles at their head, came to be established and grew rapidly.

On the eve of World War II local industry satisfied a substantial part of the domestic demand for textiles, coment, sugar, edible oils, soap and other consumer products. In 1937 industrial employment in establishments employing 10 persons and over totalled 155,000; two years later, however, the contribution of mining, manufacturing and public utilities to the national product was still only about 8 per cent.

The war greatly stimulated Egyptian industry which, in conditions of acute shortages, especially of equipment and raw materials, strove to meet the expanded demand. A wide variety of goods came to be produced and sometimes exported to neighbouring countries. Considerable expansion took place in the production of textiles, chemicals, building materials and processed foods, while entirely new industries sprang up, including rubber and pharmaceutical manufacturing. By 1947, and in spite of some decline in activity, industrial employment in establishments employing 10 persons and over had risen to 278,000. Industrial growth slowed down after the war owing to a period of relatively free trade, although industry was immensely encouraged by the opening up of foreign sources of machinery. Industrial production continued to expand, however, and in 1951 it reached about 140 per cent of its level in 1938. Throughout the decade of the fifties industrial production grew steadily at an average rate of about 7 per cent per annum, helped by the elironic deficit which developed in the balance of external payments. The exchange controls that have ruled during most of the post-war period have given Egyptian industry added protection. A great drive toward self-sufficiency after the Snez war resulted in an intensive industrialization programme which began tentatively in 1957, but was later incorporated in the first five-year economic and social development plan, 1960-65. In the six years from 1959-60 to 1965-66, gross value added by industry and mining rose, at constant prices, at an average rate of 9.5 per cent per annum.

In recent years manufacturing industry has been held back by lack of foreign exchange, and some exeess capacity has resulted from shortages of spare parts and raw materials. An acute recess hit the industrial sector in the latter half of 1967, but recovery has been rapid since then. According to the Federation of Egyptian Industries the total value of industrial production (including mining and electricity) advanced from £E1,245 million in 1967 to £E1,383 million in 1968 and again to LE1,511 million in 1969 (current values throughout). On the basis of these figures the industrial sector grow at an average annual rate of over 10 per cent—probably the same in real terms as the wholesale price index actually fell—between 1967 and 1969. In 1969 34.1 per cent of the value of manufactured output was contributed by spinning and weaving, 32.3 per cent by food processing, 12.5 per eent by chemicals, 17.7 per cent by engineering industries and 3.4 per cent by building materials industries. In the second quarter of 1967 there were 2,288 industrial establishments employing 50 workers or more (about three times the number of these establishments in 1964) and their personnel totalled 524,400. The value added in these establishments represented 94 per cent of all value added by manu facturing industry at the time Official data for employment in 1967/68 indicate a work force of 866 yoo in manufacturing industry 18 yoo in electricity and 29 800 in construction Employment in industrial activities in 1967/68 represented 14 9 per cent of total employment and 22 8 per cent of employment and added the industrial sector is roughly of the same order as the leading sector agriculture in 1968/69 value added by agriculture amounted to £E6444 million whilst value added in the industrial sector was £E598 4 million (£E4889 million inamufacturing industry £E278 million electricity and £E817 million construction)

Under a long term agreement signed with the USSR in 1954 the Russians are belings with the de-elopment of heavy industry and a new agreement was signed in early 1971 involving new finance of Africo milion. These agreements cover an iron and steel complex at Helwan (to cost £590 million) secretary loyers based industries to utilize the electricity generated by the High Dam and the electrication of all 550 willions in Egypt by connecting them to the Dam's transmission network A 200 000 tonlytest ammonium intrate fertilizer plant was unaquarted in May 1971 using gases generated in the coking unit of the steel mill.

OIL AND GAS

Vore than 60 per cent of the 130 000 barrels per day of crude petroleum produced in Egypt in 1966 originated in Sinai (mainly from the Belayim onshore and offshore fields) now under enemy occupation and said to be producing 90 000 h/d Total Egyptian production outside Sinai in early 1971 had reached 420 000 h/d and was expected to rise to 480 000 h/d by early 1972 Ahout 90 per cent of this production comes from the rich offshore field of Morgan in the Gulf of Suez operated by Gulf of Suez Petroleum Company (50 per cent Egyptian General Petroleum Corporation and 50 per cent Amoco UAR-a subsidiary of Standard Oil of Indiana) Some 30 000 h/d are produced by the General Petroleum Company from a number of small fields located on the western coast of the Gulf of Suez including Ras Gharib Bakr harim and Um el Yusr A promising discovery late in 1966 the Alamein field has been developed by WEPCO (an equal partnership between Phillips and EGPC) but production which reached 43 000 b/d in early 1970 declined to about 30 000 h/d a year later hear the Libyan border drilling continues mainly by Phillips which discovered the Umbaraka field The latter which looked promising turned out to be a disappointment but a new discovery Abu Gharadiq (which could be connected to the Alamein Sidi Abdul Rahman pipeline) is believed to be potentially quite significant Intensive search for oil continues with a production target of 1 million h/d by 1975 supported y a budget of £E400 million in the period 1970-75 The search covers practically all of Egypt Active drilling is taking place near the Siwa oasis with the belp of Russian seismic tests and in the Gull of

Suez in partnership with the Japanese Trans World Petroleum has also arquired 20 000 sq km oushore and offshore in the Gulf of Suez and Amoco is exploring areas between Asyout and Minya in Upper Egypt

The destruction of Egypt's main refinence at Suez has upset the balance between crude supply and products demand The two defunct refinences with a total capacity of 144 000 hd or 7 z million tons/year were located where the bulk of crude was produced With the Saez Canal closed the Morgan oil is too far from the Mex (near Alexandria) refinery with a capacity of only 65 000 hd (3 25 million tons/year). In the last few years a two-way trade has developed with Egypt exporting crude and unporting products although crude has also been imported (from Libya and the U SS R) to supplement Alamen production for use by the Mex refinery. Some products also are being exported.

Exploration for oil has revealed promising sources of gas Associated gas at the Morgan fields is estimated to amount to goo million cubic feet a day and the wall be used eithern and the property of the property of the property of the property of the property of the property of the delta notably in the Abu Qir area (offshore as well as onshore) by Philips (wells yielding ay million and 7 8 million cubic feet a day respectively together with condensates). A joint ENT Exprising gas strike near Abu Madi in 1970 is being developed for use as fuel by the large industrial centres in the north and west delta and a 750000 tons a year fertilizer plant is also projected to make use of this gas the property of the proper

The closure of the Suez Canal and the development of super tankers have led to the decision to construct a crude oil pipeline inking Suez to the Mediterranean near Alexandria A consortium of European contract ors lead by the French company Baignoiles have won the hidding for this \$210 million project which has been hacked by offers of finance from Germany France Britain Italy Spain the Netherlands and others Discussions were held in mid 1971 in Cano with the Sumed contributors with the object of raising the capacity of the pipeline above the original 60 million tons/fyear either by doubling the line or enlarging the dnameter from 42 to 43 niches

FINANCE

Until World War I Egypt operated a kind of gold standard which was replaced by a sterling exchange standard in 1916 British Treasury hills came to be used as a cover to the Egyptian currency issued by the National Bank of Egypt then the hank of issue The Sterling connection was severed completely in 1914 and special arrangements were devised to liquidate Egypt's holdings of British securities representing wartume debts which had accumulated in Egypt's favour to the amount of 4400 million During most of the period when Egypt was on the sterling exchange standard and when most of Egypt's external trade was conducted in that currency movements of sterling in and out of the country corresponded with the state of the balance of trade and the whole level of internal

activity followed these movements. From July 1948 onwards, Egyptian government securities have complemented the gold reserves as currency backing, and Egypt has followed a policy of money management based on a separation between the balance of payments and domestic money supply. On the whole, however, the National Bank of Egypt pursued a rather conservative monetary policy which, together with running down foreign reserves to finance a continuous balance of payments deficit, resulted in relatively stable prices prevailing from the late forties until the early sixties. In 1960 the issue Department of the National Bank of Egypt was converted into the Central Bank of Egypt, which assumed all the functions of a central bank; the banking department under the name of the National Bank of Egypt became a commercial bank. All banks operating in Egypt were nationalized in 1961, and apart from the Central Bank, the Government sponsored Industrial Bank, three mortgage banks, and the Crédit Agricole, all other banks were amalgamated into five, and brought under the control of the Central Bank and a Public Organization for Banking which, however, was later abolished. In March 1964 the Crédit Agricole itself, became a public organization: the Public Organization for Agricultural Credit and Co-operatives, and put under the supervision of the Ministry of Agriculture.

At mid-1967, according to a publication of the Central Bank of Egypt, there existed 455 branches of banks (including the *Crédit Agricole*) located throughout Egypt. The latter had 118 branches, the five commercial banks, between them, had 325 branches, the three mortgage banks 9 branches, and the industrial Bank 3.

Compared with an average rate of growth for the real economy of 5-7 per cent a year since the early 'sixties, money supply has been increasing on average by about 9 per cent a year. This has been coupled by a growing share in the economic life of the community of the public sector which has proved to be a great user of means of exchange. Many controls, public subsidies and an import surplus helped to keep the prices of essentials in check, however. In 1962, at the request of the IMF, the Egyptian pound was devalued (from a parity of \$2.838 prevailing since the September 1949 devaluation, along with sterling) to \$2.30; at the same time the bank rate was raised from 3 to 5 per cent. These traditional anti-inflationary devices, however, had little effect on effective demand and hence the balance of payments disequilibrium, since most of the credit created by the banking system was (and still is) for use by the public sector. At the end of 1963 the share of the public sector in the use of credit facilities amounted to 75.2 per cent of the total created in the entire economy. By the end of April 1971 this share had fallen to 68.0 per cent. As at the end of 1963, 43.3 per cent of total credit facilities granted, went to industry, 32.7 per cent to trade, 12.3 per cent to agriculture and 11.7 per cent to other activity. Spinning and weaving obtained 28.2 per cent of the credit used by industry, followed by construction and building at 17.2 per cent. Four years later the share of industry in total credit was 53:1 per cent, that of

trade 27.8 per cent, agriculture 7.6 per cent and other activities 11.5 per cent. Spinning and weaving obtained about a quarter of the credit used by industry, iron and steel and other metals about a fifth and each of construction and chemicals about a sixth. Since then money supply has accelerated, with much of the increase being in the form of a rise in currency in circulation.

Following the June War, a drastic curtailment in economic activity ensued, coupled with severe limitations on imports and the money issue. In the fiscal year July 1967 to June 1968 money supply retreated by about 3 per cent, and net currency in circulation by about 4 per cent, but both quantities resumed their upward trend afterwards, though less speedily than before. All this has been reflected in the movements of the price indices, which, as officially calculated, tend to underestimate price rises. Marked rises in prices occurred in the course of 1965 and 1966. During 1967 there was a decline in the rate of increase of wholesale prices and a fairly stable level of consumer prices. During 1968, wholesale prices actually declined but consumer prices registered a significant advance. Wholesale prices fell again by about 2 per cent in the course of 1969, but rose by 6 per cent in 1970. Consumer prices, on the other hand, rose by about 3 per cent in 1969 and by 8 per cent in 1970.

Egypt's national debt continues to mount, and its servicing has become a burden on current finance. In mid-1964 total internal debts amounted to £E927.4 million (of which £E232.0 million national and development loans, £E335.0 Treasury bills, £E100.0 loans for financing external debts) in addition to £E28.0 being government guaranteed bonds. In 1963-64 government budgetary allocations for servicing the Public Debt, both internal and external, totalled £E48.8 million. At mid-1966 Egypt's foreign debt was estimated at \$1,300 million. No later information on the national debt, its cost of servicing or an estimate of foreign indebtedness has been published since, but there are indications that all these magnitudes have risen over the past few years.

Beginning with the 1962-63 budget, a link was established between government finance and the development plan. Previously two annual budgets were drawn: a current budget and a development budget. With the growth of the public sector operations, the system introduced in 1962 sought to present the budgetary inter-relations between the "Services Sector" (including health, education, defence etc.) and the "Business Sector", comprising public enterprises. With the 1968-69 budget, yet another new budgetary system was devised. The new system is claimed to present six separate budgets:

- 1. Current Services Budget.
- Public Authorities Current Budget.
- 3. Economic Organisations Current Budget.
- 4. Special Finance Fund's Current Budget.
- 5. Investment Budget.
- 6. Capital Transfers Budget.

All these budgets, however, can be grouped together under two headings: recurrent and investment, with the recurrent items covering (1) Services (2) Local Authorities and (3) Public Interprises and the Investment Items classified as between (1), (2) and (3) Invally an account showing the sources of financing expenditure or pend the as originating from Special Form of the sources of the sourc

FOREIGN TRADE AND PAYMENTS

Until quite recently when a limited degree of free dorn was allowed to pravate business all imports and exports have been curried out by or through the public sector and all carnings and disbursements of foreign exchange are subject to strict control Nevertheless imports continued to outstrip exports until after the June 1967 was when a drastic reduction of the trade gap was achieved through a heroic effort. It should be mentioned that the external trade deficit has persisted without interruption for almost the whole of the past two decades It was showing signs of increasing over time until approximately 1966 The deficit is significant of the fact that Egypt requires more from the outside world both for investment and current consumption than it can pay for by current exports and no practicable rate of exchange for the Egyptlan pound is likely to restore long term equilibrium to the recent improvement of the trade balance will probably not list the unusual surplus of £1.474 million achieved in 1969 gave way to a deficit however small in 1970 The government keeps a constant vigil on all external payments permitting only the most essential imports but the pressure of population on re ources helps to keep the balance of external payments in a critical state The problem is unlikely to be solved without a breakthrough in the pattern of imports and exports which may be brought about by the development of the petroleura sector

An official classification of the 1969 Imports (which added up to 17.273 million compared with 17.296 million in 1968) shows that these were £166 2 million loodstaffs (mainly cereals and milling products) £266 million other consumer goods (tyrgel, tobacco textles paper and phurmaceuticals) and £11850 million my materials and capital goods (about a quurter mineral products a filth chemical products 35 per cent machinery equipment and tunsport equipment)

Nearly 43 per cent of the total value of exports (£E323 9 million in 1969) was made up of raw cotton (£E130 7 million). Rice exports amounted to £E55 3

milion and exports of cotton yarn and fabrics to \$I_323 million Proceeds from exports of mineral and chemical products (cennet petroleum products and crude phosphates and others) added up to \$I_238 million and the remainder of exports was largely parientlumal produce

Nearly half of the imports and a third of the exports are traded with communist countries Trade with the Arab countries is small but growing under official encouragement in 1968 UAR exports to these countries reached fr 27 3 million-about 10 per cent ol total exports There is normally a surplus on the current account of invisible trade which helps to redress part of the deficit on merchandise trade This surplus has turned into a deficit since the closure of the Sucz Can'l in June 1967 and the decline in tourist revenue Can'l dies received were £ES6 2 million in 1965 £E95 3 million in 1966 and £F 17 0 million in (the first five months of) 1967 Payments and receipts for shipping and insurance have been furly latinced at about fl to million each may Interest and dividends acquired were £L7 1 million In 1969 In 1968 the servicing of foreign loans cost frate million compared with fl.143 million in 1966 A considerable part of invisible carnings used to be spent by Egypt's over-extended embassies and offices abroad but this has been checked lately Coverament expenditure abroad was £135 5 million in 1965 (E323 million in 1966 (F290 million in 1967 and £1288 million in 1968 According to the Central Bank of I gapt the overall deficit on current transaction was Li 125 5 million in 1967 compared with LP75 6 million in 1966 and LP110 0 million in 1963 In 1969 this became (E13. 3 million

Significant transfer psyments on government account appeared on the circlit sude of the balance of payments in 1967 representing financial assistance contributed by the oil producing countries as agreed at the Arrib summit conference in Khartoum in September of thirt year. As figuring in the balance of payments this item was 86 million in 1968 and \$2.38 million in 1969 million 1969 million in 1969 million 1969 million in 1969

For a long period previously little capital movement appeared in the Egyptian balance of payments but since the financial settlements with the Suez Can't Company the French and British Governments (in respect of nationalized property and war damage elaims) the Sudan (regarding the redemption of Egyptian banknotes and coins circulating there and the flooding of land on hullding the High Dam) and other foreign countries large outgoing capital transfers have figured prominently. On the other hand credits obtained from Communist countries and to a lesser expert and for shorter terms from some Western countries and Japan have in recent years except for 1969 flowed inward and helped to finance much of the gap in current external payments. This can be seen from the capital movements in the next table

ECONOMIC POLICY

According to the provisional constitution of 1964, the economy of the United Arab Republic is one based on socialism with the people controlling all means of production. In practice this means that the government owns or controls practically every economic unit in the economy worth controlling. Although the doctrine of socialism has been invoked since the first land reform in 1952, the economy remained largely in private hands until 1961, except for the nationalization of the Suez Canal company in 1956 and that of British and French property during the Suez attack. In June and July 1961, all cotton exporting firms were nationalized, and the Alexandria futures market was closed; 275 industrial and trading concerns were taken over by the state in whole or in part; taxation was made so progressive that individual income was virtually limited to the official maximum of £E 5,000; the maximum limit on land ownership was reduced from 200 to 100 feddans (before it was reduced again in 1969); individual share-holding was limited to £E10,000; 25 per cent of the net profits of industrial companies was to be distributed to the workers, who were to be represented on the boards of directors, and to work only a 42-hour week. More measures of

nationalization and control followed the break-up of the union with Syria in September 1961; and more measures have been added, with and without an occasion, since.

It is no longer possible to give a comprehensive description of government intervention in so short a space. It is more convenient to state that the only sectors of the economy remaining outside complete government ownership are agriculture and urban real estate, but even these are overwhelmingly regulated by laws and decrees. Concerns are grouped under boards, and boards under chairmen and ministers, and a constant stream of directives helps to bring the activities of all the controlled units in line with government policies.

Since 1967 the government has introduced yet more restricting measures aiming at curbing consumer demand. These have included a variety of taxes, forced savings and compulsory contributions out of wages and salaries. There have been some recent moves, however, to give encouragement to the private sector, particularly with regard to the export trade.

THE CONSTITUTION

Summary of the new Interim Constitution issued in Cairo on March 25th, 1964.

CHAPTER 1 The State

The United Arab Republic is a democratic socialist State based on the alliance of the working powers of the people.

The Egyptian people is part of the Arab nation. Islam is the religion of the State and Arabic is its official language.

CHAPTER 2

The Fundamental Elements of Society

Social solidarity is the basis of Egyptian society. The family is the foundation of society. The State ensures equality of opportunity for all Egyptians. The economy of the State is based on the socialist system, which prohibits any form of exploitation, thus securing the building of a socialist society based on sufficiency and justice. The entire national economy will be guided in accordance with the development plan set by the State. Natural wealth contained in the subsoil and the territorial waters and all its resources and substance belongs to the State which undertakes its proper exploitation. The people control all means of production and dispose of the surplus production according to the development plan set by the State to increase wealth and realise a constant rise in the living standard. Ownership takes one of the following forms:

- (a) State Ownership: which is the ownership of the people and is achieved by creating a strong and effective public sector leading to progress in all fields and shouldering the main responsibility in the development plan.
- (b) Co-operative Ownership: which is the ownership of all those participating in co-operatives.
- (c) Private Ownership: which implies the private sector partaking in development within the framework of the development plan without exploitation. All three sectors should be under the people's control.

Private ownership is protected; its social function is to be stipulated by law. Ownership is not to be expropriated except for public interest and in return for an equitable compensation as stipulated by the law. The law defines the maximum limit of land ownership and determines means of protecting small land holdings. The State encourages co-operation and looks after all co-operative organizations

in all their forms. The State ensures, in conformity with the law, the protection of the family. The State ensures all social insurance services. Egyptians have a right to aid in old age, sickness, incapacity for work or unemployment.

Work in the U.A.R. is the right, duty and honour of every able-bodied citizen. Public posts are an obligation for those holding them. Government officials in the performance of their work should have the service of the people as their aim. The Armed Forces of the U.A.R. belong to the people. Their mission is to protect the socialist gains of the people's struggle, to protect the country, the safety of its land and its security.

CHAPTER 3 Public Rights and Duties

Egyptians are equal before the law, being equal with regard to rights and public obligations without any distinction in that respect with regard to race, origin, language, religion or belief. No criminal indictment or punishment is valid except in conformity with the provisions of the law, nor is punishment permissible except for offences committed after the issue of the law incriminating such acts. No person shall be liable to arrest or imprisonment except in conformity with the provisions of the Law. The right of defence by the person himself or by proxy is guaranteed by law. An Egyptian shall not be deported from the country or banned from returning thereto. An Egyptian shall not be forbidden residence in any locality or forced to live in any specific place except in respect of conditions set forth by the law. The extradition of political refugees is prohibited. The sanctity of a home is inviolable nor can it be entered except in the circumstances specified by law and in the manner specified thereby.

Freedom of belief is absolute, the State ensuring the free practice of religious rites, in conformity with establishing customs, provided such practice does not violate public order or morals. Freedom of opinion and of scientific research is guaranteed, every individual having the right to express his opinion and diffuse it by written, oral or any other means within the limits of the law. The freedom of the Press, printing and publicity is guaranteed within the limits of the law. Egyptians have the right of assembly

without giving advance notice provided they observe caller and carry no firearms

All Egyptians are entitled to education to be provided by the State, establishing all categories of schools, universities, cultural and educational organizations and expanding them and attaching particular importance to the physical mental and moral development of the country's youth The State shall exercise control over public education, to be regulated by law and to he free in all its stages in schools and universities. The State ensures Egyptians equitable treatment in accordance with the work they perform, fixes working hours and rates of wages, providing social insurance, health insurance, insurance against un employment and leaves of absence. The establishment of professional and labour unions is a guaranteed right and they are to be considered bodies corporate under the terms stipulated by law Medical care is a right to be enjoyed by all Egyptians, through state action by the establishment and expansion of all kinds of hospitals and sanatoria Defence of the homeland is a sacred duty and imittary service is an honour for all Egyptians being also com pulsory in conformity with the provisions of the law Payment of taxes and infiliment of public obligations is a duty in accordance with the law Voting is a right for all Egyptians in the manner specified by law and their participation in public life is a patriotic duty incumbent upon

The Pres dent of the Republic appoints members of the Civil Service and officers of the Armed Forces and discharges them he also accredits the foreign diplomatic

The President may order a plebiscite in order to consult the people on important issues involving the higher interests of the State the manuer in which the plebiscite is to be carried out shall be determined by the law

Sub-Section II-The Government

The Government consists of the Prime Minister the Deputy Premiers and the Ministers The Prime Minister administers Government affairs and presides at the meetings in the Council of Ministers The Government exercises the following functions

1 Guiding co-ordinating and revising the Ministers work as well as that of the general organizations and authorities

- 2 Issuing the administrative and executive decisions according to the laws and decrees and checking their implementation
- 3 Preparing draft laws and resolutions.
- Appointing and dismissing employees according to the law
- 5 Preparing the draft of the general budget of the State 6 Preparing the draft of the State s general plap for the
- development of the national economy and taking all necessary measures to ensure its execution 7 Supervising the organization and administration of
 - the currency and credit systems and of misurance operations
- 8 Contracting and extending loans within the limits of the State's general policy
- 9 Supervising all the general organizations
- so Supervising the enforcement of laws preserving the security of the State and protecting the rights of the efficient and the interests of the State.

The Government controls the work of the bluustness as well as that of the local and general departments and anthorities It has the right to cancel or modify decisions which prove to be unsuitable in the light of the law The control and inspection authorities are directly responsible to the Prime Bluister.

Anyone who is to be appointed as Minister must be an Egyptian who as at least 30 years of age and who enjoys all civil and political rights

The President and the National Assembly have the right to put a Minister on trial for any offences be may commett while conducting his duties. A National Assembly does on to level an accusation against a Minister should be at the request of at least five members. The accusation decision is not to be passed unless it obtains the support of two-thirds of the Assembly's members. The accusation Minister will be suspended until his case in decided. The law appoints the authority which would undertake the trial of Ministers It also provides for the accusation and trial procedures.

The Cabinet Ministers and the Deputy Ministers may be members of the National Assembly Members of the National Assembly may be appointed Under Secretaires of State for National Assembly Affairs. The law defines the rules relating to them

Sub-Section III-National Defence

(a) Cowned of Network Different A Cowned shall be not up to be called Council of National Defence The President of the Republic shall assume its command. The Council of National Defence is concerned with considering affairs relating to the means of safeguarding the country and its safety. The other jurisdiction is prescribed by the law

(6) The Armed Torces It is the State that raises the Armed Forces. No body or group is permitted to form any military or quasi multary formations. The State in compliance with the law organises the multary training of youth and regulates the National Guard General mobilization will be organised in compliance with the law.

Sub-Section IV-Local Administration

The United Arab Republic is divided into administrative units It is permissible for each or some of them to bave corporate personality in compliance with the law

The bodies representing the administrative units participate in the implementation of the general plau of the State They are entitled to establish and administer public utulities and economic social and health projects as prescribed by the law

UNITED ARAB REPUBLIC-(THE CONSTITUTION, THE GOVERNMENT)

CHAPTER 5

The Judicial Authority

Judges are independent, with no power above them in making judgments except the law. It is not permissible for any authority to interfere in cases or in the affairs of justice. The court sittings are public unless the court decides to make them closed in the interests of public order and morality.

Judges are not subject to dismissal except as prescribed in the law. The law organizes the function and jurisdiction of the Public Prosecution and its relation with the judiciary. The appointment of members of the Public Prosecution department, taking any disciplinary action against them or their dismissal are effected in compliance with the conditions approved by the law. The law organizes the arrangement of the State Security Courts, and determines their jurisdiction and the qualifications of those who sit in judgment in these courts.

CHAPTER 6

General Provisions

The City of Cairo is the capital of the United Arab Republic.

The law prescribes the national flag and the provisions relative thereto.

The provisions of laws shall be applicable from the dates of their enforcement, and shall not be effective with respect to acts having taken place prior to these dates. However, in non-criminal provisions, laws may stipulate otherwise with the approval of the majority of the National Assembly members. Laws shall be published in the "Official Journal" within a fortnight from the day of their promulgation.

The President of the Republic and the National Assembly shall have the power to demand the amendment of one or more articles of the Constitution. The demand for amendment must show the articles required to be amended and the reasons for such amendments. In the case of the demand for amendment being made by the National Assembly, it shall be signed by at least one-third of the members of the Assembly. In all cases, the Assembly shall debate the principle of the amendment, passing its decision by a majority of votes. If the demand is rejected, another demand for the amendment of the same articles may not be put forward before the lapse of one year following the rejection. If the National Assembly approves the principle of the amendment, it shall, after two months of the approval, debate the articles required to be amended. The amendment shall become effective if two-thirds of the members of the Assembly approve it.

All provisions contained in laws, decrees, orders and regulations prior to the issue of this Constitution shall remain in force. Notwithstanding such laws, decrees, orders and regulations may be rescinded or amended in accordance with the principles and procedures laid down by this Constitution.

Note: A constitutional committee is to submit proposals for a new permanent constitution for approval by national referendum before the end of August 1971.

PEOPLE'S ASSEMBLY

Elections to a new National Assembly were held on Jannary 8th, 1969 and the first session began at the end of the month Three hundred and fifty members two from each of the 175 electoral districts were elected for a five-year term One half of the members must be workers or larmers, or of comparable status Unly members of the Arab Socialist Union can stand for election, but more than two candidates may contest each district in 1969 there are the status of the same of the

President of the Assembly: Dr Munammad Labib Shokeir.

POLITICAL PARTY

Arab Socialist Union: Cauro, f. 1957 us the National Union renamed 1951 the sole political party Chair President Sadat See, Andri Morsin Abul Nur, the Higher Executive Cities has 9 members the Central Cities 150 members and the Nat Congress 1 701

JUDICIAL SYSTEM

The Courts of Law in the United Arab Republic are basically divided into four categories as follows

- I The Supreme Court (called The Court of Cassation)
- 2 The Courts of Appeal 3 The Primary Tribunals
- 4 The Summary Tribunals

Each Court contains criminal and civil chambers

1. The Supreme Court

The highest Court of Law in the United Arab Republic Its sessions are held at Cairo and its jurisdiction covers the whole United Arab Republic territory

Final judgements rendered in criminal and civil matters may be referred to the Supreme Court—by the accused or the Public Prosecution in criminal matters and by any of the litigants in civil matters—in cases of misapplications or misinterpretations of the law as applied by the competent court in final judgement is well as in case of irregularity in the form of the judgement or the procedures having effect on that judgement.

The Supreme Court is composed of the Chief Justice, four Deputy-Chief Justices and thirty six Justices

four Deputy-Chief Justices and thirty six Justices
Z. Courts of Appeal

There are aix Courts of Appeal situated in the more important Governorates of the United Arab Republic Caro Alexandria, Asynt Mansura Tanta, and Ben Suel Each of these courts contains a criminal chamber The Assiste Court to try cases of felonies and a cryd chamber to hear appeals flied by any of the hitigants in

UNITED ARAB REPUBLIC-(JUDICIAL SYSTEM, RELIGION)

civil matters against a judgement rendered by the primary tribunal, where the law so permits.

President in Cairo: M. MAHMOUD ABD-EL-LATIF.

3. Primary Tribunals

In each Governorate, there is a Primary Tribunal, each of which contains several chambers. Each chamber is composed of three Judges. Some of these chambers try criminal cases, whilst others hear civil litigations.

Primary Tribunals sit as Courts of Appeal in certain

cases, according to circumstances.

4. Summary Tribunals

Summary Tribunals are branches of the Primary Tribunals and are situated in the different districts of the Republic. Each of these tribunals is composed of a single Judge.

Summary Tribunals hear civil and criminal matters of minor importance according to certain details.

The Sharia Courts or courts of Islamic Law, and the religious courts maintained by non-Muslim minorities have been abolished since 1955.

The Public Prosecution

The Public Prosecution is headed by the Attorney-

General and consists of a large number of Attorneys, Chief Prosecutors and Prosecutors, who are distributed among the various districts of the Republic. The Public Prosecu tion is represented at all criminal Courts and also at litigation in certain civil matters. Furthermore, the enforcement of judgement rendered in criminal cases is controlled and supervised by the Public Prosecution.

Attorney-General: Ahmad Musa.

The Supreme Judicial Council

This Council exists to guarantee the independence of the judicial system from outside interference. Under the presidency of the Chief Justice, the Supreme Judicial Council contains the following members:

the Chief Justice

two Deputy Chief Justices the Under-Secretary of State for the Ministry of Justice

the Attorney-General

the President of the Court of Appeal in Cairo the President of the Primary Tribunal in Cairo.

All matters concerning the promotion, discipline or otherwise of the members of the judicial system are referred to this Council,

An Arbitration Bureau was set up in 1966 to investigate cases between state and public sector organizations.

RELIGION

Over 94 per cent of Egyptians are Muslims, and almost all of these follow Sunni tenets. The four tenets are represented in the Republic and all follow the Holy Koran and the Sunna. Villagers adhere strictly to Islamic rites and teachings. Since the Fatimide dynasty, Egyptians have attached great importance to the decoration of their mosques. St. Mark is considered to be the first founder of the Coptic Church after Jesus. The Coptic Church is known historically as the Church of Alexandria or the Egyptian Coptic Orthodox Church, and is still considered the main Eastern church. There are over a million Copts in Egypt forming the largest religious minority, there is no discrimination of any kind against them, and they have contributed greatly to the cultural life of Egypt. Besides the Copts there are other Christian minorities numbering about a quarter of a million and consisting of Greek Orthodox, Roman Catholics, Armenians and Protestants. There is also a small Jewish minority.

Sheikh of Al Azhar: Muhammad el Fahham.

Grand Muffi of Egypt: Sheikh KHATIR MUHAM MUHAMMAD. Coptic Orthodox Church: Azbakia, Cairo; f. 61 A.D.

Coptic Catholic Church: Patriarch Cardinal Stephanos I. Sidarouss, 34 Sh. Ibn Sandar, Koubbeh Bridge, Cairo; 4 dioceses; 120,000 mems.; publ. Al Salah.

Greek Catholic Patriarchate: 16 rue Daher, Cairo; Patriarch of Antioch, of Alexandria and of Jerusalem His Beatitude Maximos V Hakim; 440,000 mems.

Greek Orthodox Church: Patriarch Christophoros II.

Armenian Apostolic Church: 179 Ramses Ave., Cairo, P.O.B. 48-Faggala; Archbishop Mampre Strounian.

Armenian Catholic Patriarchate: 36 Mohammed Sabri Abou Alam Street, Cairo; Archbishop Raphael Bayan.

Maronite Church: Archbishop PIERRE DIB.

Jewish Community: Office of the Chief Rabbi, Rabbi HAIM Douek; 13 Sebil-el-Khazindar St., Abbassia, Cairo.

THE PRESS

The press of Egypt is far more advanced than that of any other country in the Arab Middle East Circulation of the leading newspapers such as al Abram Abbar al Yem and al Abbar reach figures of \$30000 and more whereas even the bigger newspapers in other Arab countries sell no more than about 20000 per issue

Several of the Cairo newspapers and magazines have important circulations in other Arab countries although entry in Saudi Arabia Jordan and Tunisia is at present either restricted or altogether banned for political reasons

Newspapers were placed under the control of the Natonal Union (later reformed as the Arab Socialist Union) by a decree issued by President Natser in May 1960 Journalists were obliged to obtain beneen from the National Union and publishing houses, bitherto free were placed under its control All the important newspapers and magazines are now owned and controlled by the Government although the four by publishing houses of al Ahram Dar al Halla, Dar Akibbar al Yom and Dar al Gombiourys operate as separate entitles and compete write the Combiourys operate as separate entitles and compete write the combine of the Combin

Dar al Gomhonriya publishes the daily al-Gomhouriya, the daily English language paper Egyptian Gaselle, the daily French newspaper Le Progrès Egyptien and the afternoon paper al Missa

The most authoritative daily newspaper is the very old established al Ahram Other popular large circulation magazines are Rose al Youssef, Sobah al Kher and al Isaa wal Television Minority language groups are catered for by the Greek language papers Tachydromos and Phos and the Armeniana language papers Arw and Houssaper

Atomic Energy Organization: Dokki, Cairo; f. 1955; Dir. Dr. SALAH HEDAYET. First reactor with 2,000 kW. power, opened at Inchass in 1961.

Regional Radioisotope Centre: Cairo; f. 1957; eleven laboratories for research and development in scientific, medical, agricultural and industrial fields; in 1963 the

Centre was transformed into a Regional Centre for the Arab countries of the Middle East, in co-operation with UN I.A.E.A.

The Institute of Nuclear Engineering at Alexandria University is to use a loan of £E 250,000 from Kuwait to purchase an atomic reactor and laboratory facilities.

EDUCATION

Great importance has been attached to the development of educational facilities by the Republican Government since 1952. Its educational policy states that education is free and should play an indispensable part in the life of every citizen. It was realised that the first and most essential step in the programme of educational expansion was the construction of an adequate number of new schools. In 1952 a Ten Year Plan was inaugurated whereby an organization known as "The Schools Premises Foundation" was given the responsibility of constructing 400 new schools each year. Education, particularly technical education, has continued to be a primary concern of the Government after the formation of the United Arab Republic, and in the 1967-68 budget £E 116 million was allocated to education.

Some 15 per cent of children go to private school, and there are two private universities. The state education system is admitted to be overcrowded at all levels; for this reason an estimated one million children of primary school age are not in fact attending a school.

Primary Education

This is extended to all children between the ages of six and twelve, and is free and compulsory. Four hundred primary schools are being constructed annually. The number of pupils in the primary stage in the year 1952 amounted to 1,540,202 (997,490 boys and 541,708 girls), compared with 3,471,334 in 1967-68 (2,129,884 boys and 1,341,450 girls). In the latter year the pupils were organized into 81,700 classes in 7,800 schools.

Preparatory Education

This is an intermediate stage between primary and secondary education. There were two main different types of preparatory school, general and technical, but the technical schools are being phased as separate institutions at this level. In 1967-68 there were 1,270 preparatory schools, organized into over 20,000 classes attended by about 750,000 children (two-thirds being boys).

Secondary Education

(a) General schools: here the emphasis is placed on academic studies. The aim is to develop the abilities of pupils best qualified for a university education. The number of students in 1967–68 was about 260,000 (180,000 boys and 80,000 girls).

(b) Technical Schools: a vocational training is given in these schools, in agriculture, industry or commerce. To ensure a knowledge of the machinery used in local production, students of industrial schools are given a practical training inside the factories. Owners of large factories are obliged to run training centres on the premises for their own workers. In 1967-68 there were 153,000 pupils in technical schools of various kinds. There were also about 35,000 pupils in 67 teacher training establishments.

University Education

In addition to the old and famous Al-Azhar University, which opened its gates to women students in 1962, there are the universities of Cairo, Alexandria, Ain Shams and Asyut.

Care University was founded privately in 1908 in 1928, it became the State University The American University at Care was founded in 1919. Alexandras University in 1942 and Ann Shams in 1939. Another university has been founded at Assuit and was opened in time for the exadence year 1957–38. Most universities include the following faculties Agriculture Commerce Dental Surgery Mediume Pharmacy Engineering Law Arts and Science

In addition there are various post graduate courtes of study and many students are sent abracal to complete their higher education More however, come from other countries to study in the U.A.R. in 1966-67 there were about 35 000 foreign students of whom some 23 500 came from the countries of the countries of the countries of the countries are monopit the world's largest (45 000 students at Caro University) but the facilities are mostly very overcrowded

Adult Education

A campaign to promote literacy and adult edination is being directed and financed by the Ministry of Education, but, according to law, firms and business houses must combat the illustracy of their workers Centres for the teaching of illustracts have also been created in the army, police and prisons departments Presidential Decree No. 7 of 1057 set out to reorganize the establishment of unstitutes and colleges. These institutes comist of teacher training schools for boys and guis, special technical institutes, commercial imdustrial and segrecultural institutes.

Yemen Arab Republic

GEOGRAPHY AND HISTORY

The State of the Yennen lies at the south west corner of the Arabian pennands and comprises two well-defined areas—the highlands inland and the coastal strip along the Red Sea The climate of the highlands is considered the best in all Arabia since it experiences a régime rather like that of East Africa with a warm temperate and rainly summer, and a come move and a state interpretable that the state of the

Because of this climatic gradation, from desert to temperate conditions, the Yemen has a similar gradation of crops and vegetation. The highest parts appear as "Aintean", with scattered trees and grassland Crops of coffee, qat, cereals and vegetables are grown, whilst lower down, 'Mediterranean' fruits appear, with millet, and where firigation water is available, bananas Finally, near the coast, the date palm becomes the only tree

The area of the State of the Yemen is approximately 7500 sequare miles and its population has been estimated 55 5 million. The capitals are Sana'a (on the d El Jeha) platean, altitude 7,250 ft) and Tair (altitude 4,650 ft), which have populations of 100,000 and 30,000 respectively

In classical times the Yemen formed part of the southeastern area of Araba Felix. One of the best known kingdoms in that region was that of Sheka, which laisted from 90 to 115 B of From then until the sixth century A.D. Arabas Felix was ruled by the Himyarite dynasty, from whom the modern Hamas claim descent In a 0.525 the Ethioplans conquered the Himyarite Kingdom, and they in turn were overthrown by a Persain invasion in 575 Duning the seventh century the country nominally accepted islam and the Sunais of the Shali, rule established their power in the Thamas (the constal region), and the Zadas, a moderate branch of the Shal, reld the highlands

During the minth century the Zaidi Imam Yahya al-Hadi ila'i Haqq founded the Rassid dynasty of the Yemen, which has survived, with some interruptions, to the present time

In 1517 the Yemen was conquered by the Ottoman Turks, but ther power was continually contested by other European powers, and their authority was not great Ferce tribal and religious warfare led the Turks of establish in 1872 a full occupation of the country under a Turksin Fair Turk occupation lasted unit the Mindros Turksin Fair Turk occupation lasted unit the Mindros and the Country which is not the Imman Yabiya had led a full-scale revolt which in 1911 the Imman Yabiya had led a full-scale revolt which and in the Imman is the highlands and the Turksin the Imman in the highlands and the Turksin the Imman and on the coats.

During the first World War the Imam had supported the Turks, and the British had therefore supported Idnsi invaders from the small state of the Asir to the north of

the Yemen A succession dispute broke out in the Asir in 1923 in the course of which Imam Yahya of the Yemen had occupied the port of Hodeida and the coastal areas By the Treaty of Mecca in October 1926 the Sheikh of the Asır was placed formally under the protection of Ibn Sa'ud, this position, however, was never enthusiastically accepted by the Imam who continued to bait the new king of Arabia and also to encroach on the British protected territory of the Aden Protectorate In these activities he seemed to have had the support of Italy, with whom he signed a treaty of friendship in 1926, and a Soviet trade delegation made a brief appearance in the country at this time In 1930 following on a dispute over his Hijaz borders he encouraged the Sheikh of the Asir to revolt against Ibn Sa'ud the latter attempted to settle the dispute by peaceinf means, and negotiations dragged on until 1934. In April of that year, however, Ibn Sa'ud decided on more drastic action, marching on the Yemen, he drove the Yemeni troops out of Hodeida, and in a bloodless campaign of a month forced them back into Sana'a The peace treaty of Ta'if allotted Tihama and Nayran to Ibn Sa'ud but otherwise left the boundaries of the Yemen undisturbed -a policy of moderation that won him considerable prestige At the same time Britain formally recognized the independence of the Yemen by treaty, and ended for a time a long series of frontier disputes

time a long series of frontier dispotes. The despotic and conservative Imam Yuhya continued. The despotic and conservative Imam Yuhya continued to the series of the property of the property of the property of the property of the property of the property of the property of the throne and drove out the inaurgent, Since then the Yemen has been co-operating in international affairs, an January 1951 a start was made on the development of the and at the same time full diplomatic relations were exhaust and at the same time full diplomatic relations were exhaust and at the same time full diplomatic relations were exhaust blaked for the first time with foreign powers, including Dirtain, the US A and Egypt During 1953 agreements were concluded with German and Italian firms for the development of the Yemen's mineral resources, finishing adverses have also been employed in commention with adverses have also been employed in commention with

In the winter of 1953 Yemen, with Arab support, began pressing before the United Nations her claims to Aden and the territories of the Aden Protectorate, and throughout the summer of 1954, and again in 1955, there was a series of froutier incidents

In April 1955 an attempted coup d'élat against the Imam Ahmad was defaeted, and the royal conspirators executed, but one consequence may have been the Imam's decision in August of that year to set up a formal eabinet During 1956 relations were established with the Soviet Union and a mitrary part was concluded with Egypt, Saudi Arabia and Syras

In March 1955 Yemen protested against Britain's grant of an oil concession to the BP (formerly D'Arcy) Exploration Company on the Red Sea island of Kamaran, claimed by the Yemen Further protests were made in July 1958 and May 1959

The frontier dispute between Britain and the Yemen was continued late in December 1956 and in 1957, when Yemeni tribesmen were reported to have attacked villages in the Aden Protectorate The Crown Prince visited London for falls in November 1957, but hoshities

flared up again in the spring of 1958 and the political committee of the Arab League denounced the actions of Great Britain in the Aden territories. Two bomb incidents in Aden itself led to the enforcement in May 1958 of a temporary state of emergency. Unsuccessful talks to settle the dispute were held in July 1958 and May 1959. (For a fuller account of the border dispute see the chapter on Southern Yemen.)

A Yemeni delegation, headed by the Crown Prince, visited Cairo in February 1958 for negotiations which led to a federal union between the United Arab Republic and the Yemen, established by an agreement signed in Damascus on March 8th. The new union was named the United Arab States, and was to have a unified defence and foreign policy, and later a Customs union and common currency. Few practical steps were taken to that end and although in November 1961, the Yemen renewed the agreement for a further three years, the Federation was formally dissolved by the United Arab Republic in December 1961.

In May 1959 disorders followed the departure of the Imam Ahmad to Europe and the Crown Prince Muhammad al-Badr introduced various reforms, including the innovation of a Representative Council. This policy was reversed

on the return of the Imam in August.

CIVIL WAR 1962-1969

In March 1961 there was an unsuccessful attempt to assassinate the Imam, who was wounded in the shoulder. The Imam dicd in September 1962, and was briefly succeeded by his son Muhammad Badr. But a week later a revolt broke out, led by Colonel Abdullah Sallal, supported by troops from the U.A.R. The new Imam fled into the hills after a series of attempts to regain the capital, and Republican forces gained control of most of the country. The Republic was soon recognised by the U.S.S.R. and the United States, and early in 1963 was admitted to the United Nations. Britain, however, continued to give recognition to the Royalist régime, and stated on a number of occasions that she would only recognise the Republic when U.A.R. forces were withdrawn. Fighting continued throughout the year and did not cease until the summer of 1969, having been particularly severe during the winter of 1963-64 and much of 1968. An Observer Mission dispatched by the United Nations found that an agreement for simultaneous withdrawal of U.A.R. troops and Saudi Arabian military supplies had not been implemented by either side. The Mission operated from July 1963 to September 1964.

The rapprochement between U.A.R. and Saudi Arabia in February 1964 suggested that a solution would not be long delayed, and recognition by Jordan of the Republican régime was a further important step towards complete acceptance of the Revolution and its consequences. Britain, nevertheless, maintained her stand in support of the Royalists; the interest of the U.A.R. in driving British influence out of South Arabia (the Yemen Republican leaders were less vehement in this aim than their Egyptian colleagues) only strengthened the determination of the

United Kingdom Government.

In May 1964 a new Republican Government was announced under the terms of a new Constitution published in April. The Prime Minister, Hamud Al Jaifi, soon displayed his command of the situation, which was emphasised by the frequent absences of the President for medical treatment in Cairo and Europe. In a policy statement in June a programme of school, hospital and road building was announced, and in July an agreement was signed in Cairo to establish a U.A.R./Yemen co-ordinating council and a joint military command; 90 per cent of the expenses of these ventures would be provided by Egypt, which had already sent an estimated 40,000 troops into the country in support of the Republicans.

In September the UN military observers left the country. while at the same time Sallal was attending the Arab Summit Conference in Alexandria. Following this meeting President Nasser and King Faisal discussed the Yemen situation, and this led in November to a meeting at Erkwit in the Sudan, at which republican and royalist delegations agreed to a ccase-fire and the convening of a national congress. Differences over procedure forced the postponement of this, and in December the royalists resumed the offensive. During January the Imam al-Badr pro-claimed a constitutional charter. This military and political offensive led to dissensions in the republican cabinet, culminating in the fall of Hamud Al Jaifi in January 1965, and his replacement by Lieut.-Gen. Hassan Al-Amri with a mandate to stiffen the war effort. In April, however, Lieut.-Gen. Amri resigned, and was replaced by the moderate Ahmad Muhammad No'man, who embarked on a policy of conciliation. The long postponed National Congress met in May in the village of Khamer, though without the participation of the royalists, and on May 9 the text was published of an interim constitution, setting up a supreme Consultative Assembly with power to make laws, remove members of the Republican Council, and nominate the President. Despite the energetic efforts of Mr. No'man to achieve a peace settlement, it was not long before his sympathy for the Baathist cause ran him into opposition from the Egyptian authoritics, who retained a measure of financial control over the Yemen. In July No'man resigned and after a few days of uncertainty President Sallal announced a new cabinet headed by Lieut.-Gen. Amri. The return to prominence of the military, pro-Egyptian element coincided with a number of important Royalist advances, and relations between the U.A.R. and Saudi Arabia worsened dangerously as each accused the other once again of complicity in the civil war.

THE SEARCH FOR A SETTLEMENT

In late summer events took a more hopeful turn when President Nasscr agreed to discuss the Yemen situation with King Faisal at Jeddah. On August 24th, after their two-day conference, the two leaders concluded an agreement on a plan to bring the war to an end and to establish, within fifteen months, a Yemeni government free from outside interference. The agreement stipulated that a cease-fire was to be declared immediately; Saudi Arabia was to stop supplying arms to the Royalist forces; an interim government of moderate politicians, excluding both the Imam al-Badr and President Sallal, was to be set up within three months; after which the Egyptian forces, numbering about 50,000, were to be withdrawn during the ten-month period ending September 23rd, 1966. By November 23rd, 1966, a plebiscite would be held to enable the Yemenis to choose the political form they wish their state to assume.

Although the immediate effects of the Jeddah agreement were hopeful, including the establishment of a more representative Presidency Council for the Republic, and of a U.A.R./Saudi Arabian Peace Committee, the good intentions of the participants to the agreement were soon eroded. In November 1965 a conference of Republican and Royalist envoys meeting at Haradh reached deadlock over the next steps to be taken, and through 1966 the implementation of the agreement seemed less and less likely as relations between Egypt and Saudi Arabia deteriorated. Egyptian troop numbers in the Yemen, far from being reduced, were built up; despite a further U.A.R./Saudi meeting in August in Beirut, chaired by Kuwait, a solution seemed no nearer. Worse still, in September 1966 friction between Lt.-Gen. Amri and President Sallal came into the open when the latter returned to Sana'a. A large delegation, led personally by the Premicr, then flew to Cairo to demand complete independence from U.A.R. for the Yenen regime, and the permanent removal of the President. The U.A.R. response to this was to arrest the members of the delegation, and Sallal himself assumed the duties of the premiership. This was followed by a drastic purge of the republican arread forces and administration and a wave of riots trails and executions. The dissident republican elements took refuge in the mountains to the morth.

During the latter months of 1966 republican and royalist operations began to escalate Egyptian surreturners in action and on several occasions air raids were in action and on several occasions air raids were made on the Sauda Arabana towns of Jizan and Najaran In January allegations were made of the nse of poison gas, a charre demed by the U A R

Meanwhite there was considerable diplomate activity In January Salla formed the Popular Revolutionary Union at a meeting attended by Makkawi (see Southern Yernei) Ontade Xennei, a Union of Popular Forces was formed, Ontade Xennei, a Union of Popular Forces was formed, and the Company of the Popular Forces was formed, allowing for an Islamic State of Yernen, the withdrawal of Expytian torops, and the ending of Sauda Arabian and On February 11th, 7657, Tunisia and Jordan withdrew their recognition of the Sallai regime However Jordanian recognition was subsequently restored in consequence of the Arab-Israel war of June 1967.

In July, following a major government reorganization, the Royalist took advantage of the run down in Egyptian troops to stage one of the fire for the run form in Egyptian troops to stage one of the firerest land offensives for two years Republican forces were driven from Haradh and the port of Maydi and refugees from the coastal town of all the fire of

THE ECYPTIAN WITHDRAWAL

Early in August 1967, on the occasion of the meeting of Foreign Ministers at khartoum to prepare an agenda for an Arab summutconference the U A R delegate announced that the Egyptian Government was once again prepared to put into effect the agreement drawn up with King Fasail of Saudi Arabia at 1964ah in August 1965. The supervision of the withdrawal of troops would be entired to a commuttee of three Arab states According to Radio Sana(a, a principal factor influencing this change of heart ply the Egyptians was the Heritah decision on a definite property of the Community of the Community of the Egyptians was the Heritah decision on a definite property of the Community of the Community of the Egyptians was the Heritah decision on a definite property of the Community of the Community of the Egyptians was the British community of the Community of

On August 114 an agreement on these terms was finally reached by Jung Fasasl and Prendent Nasser at the Arab leaders' conference at Rhartoum Egyptan troops were to be withcrawn within three months a plobuset to determ the state of the stat

Although President Sallal immediately protested against the peace plan, his opposition did not prove an obstacle

The Egyptian army, with an estimated strength of up to 80,000 men, had effectively colonized the Republican held sector of the Yemen and was in general neither popular nor well regarded for its military prowess Thus its withdrawal, which was completed by January 1968, was not altogether unwelcome although it naturally encouraged the Royalist forces to become bolder It also led to the deposition of President Sallal in November, carried out while he was on an official visit to Iraq, and the institution of a three man Presidency Council headed initially by Abdul Rahman al-Iriani In December 1967 General Hassan Al Amri, a militant republican, replaced the moderate Muhammad No man on the Conneil, shortly afterwards he also became Prime Minister, again replacing a more moderate man. The National Liberation Front, the left wing force that had come to power in the newly independent territory of Southern Yemen, also came to possess considerable infinence in the Yemen at this time

The Royalist army contained to make progress early in 7905, and for some time the Republican capital of Sana's was virtually besuged Its defendants claimed that the Imam was still receiving generous and from Sandi Arabia, while much of their own equipment had been taken by the Egyptians In January the Iraqu Sudami and Moroccan foreign munitiers arranged a peace meeting in Berutt, but it proved abortive as the rival factions could not even agree to meet. By April the pressure on Sana's had relaxed somewhat, a lett-wing plot to over-flavour the Af-Aum government was unsuccessful. In Jinne the Royalist leader, Imam Buthammad Badr, was deposed by his followers in favour of his son flux cousins according to some the followers in favour of his son flux cousins according to some true too from Southern Vennen met the leaders of the Republican government in July, apparently for talks regarding the rebels in the Interlead of both countries

THE END OF THE CIVIL WAR

During the 1968-69 period it became evident that the Royalsts milatry effort was in decline after its major offensive following the Egyptian withdrawal, some accounts claimed that the Royalsts eased to exist as a regular fighting force after a defeat at Hajja in December 1968 By the summer of 1969 the leading members of the Royalst camp were all in evide, and their followers had cause of this swift collapse appeared to be a first within the royal family following the deposition of the Innan The Saudt Arabiaa Government's confidence in the Royalsts, already weakened by their failure to capture Sana's thus demanded their financial and military assistance on which the Royalsts had depended Since the Republicans were apparently in receipt of substantial arms supplies from other Arab countries and the U S S R. their success was

Newcheless there was a short lived revival of military activity in the north east during the winter of 1960-90 Rebel thresmen, said to be opposed to rule from Sana'a rather than positive supporters of the Imam, surrounded the town of Saada for some weeks. This development, plus the massive economic problems faced by the government, led to the resignation of the Frime Minister Abdallah half of the Company of the Frime Minister Abdallah half socreed Grennary 1970, only sex months after ham to the Ambassador in Moscow, was then appointed as Frime Minister.

In March 1970 the Premier and the Foreign Minister met Saudi Arabian officials privately during the Islamic

YEMEN ARAB REPUBLIC-(GEOGRAPHY AND HISTORY)

Foreign Ministers Conference at Jeddah. Although no formal announcement of the outcome was made, it appeared that an informal peace settlement was agreed upon. As a result, the leading Royalists, apart from the Imam and the royal family itself, returned to Sana'a in May 1970 and were offered a number of posts in the administration. Ahmed Al Shami, the former Royalist foreign minister, joined the Presidential Council, four Royalists joined the cabinet, and others were given high diplomatic or civil service posts or became members of the National Assembly.

The government was said to be anxious to open relations with the Western countries which had recognized the Royalist regime; in July 1969 diplomatic relations with

Federal Germany were restored at a time when several Arab states followed an opposite policy in recognizing the G.D.R. (East Germany). One result was a generous offer of economic and financial aid from Bonn. In July 1970 Saudi Arabia formally opened diplomatic relations with the republic, and within a few days Britain and France followed suit. Drought created a widespread famine in the summer of 1970, and offers of food and medical supplies were received from many countries.

In December 1970, a new constitution was promulgated, providing for a Consultative Council to replace the National Assembly. Elections were held in March 1971.

C.N.B.

ECONOMIC SURVEY

AGRICULTURE

Yemen contains some of the most fertile land in the Araban Pennisula both in the highlands, where agriculture has always been extensively practised, and in the dry coastal plain of the Thaima Yemen's best known crop is coffee, grown mainly in the hills behind the Thiama although it is cultivated in various degrees all over the country. It is Yemen's largest foreign exchange earner, but the amount of land devoted to it is decreasing partly because of fluctuations in demand on the world market, partly because the farmers find the narcotic gat to be a more profitable corp Qat is grown over a very wide area and it is estimated that as much land is devoted to its cultivation as to that of cotton or tobaccod.

Dhurra. Yemen's major cereal crop, is grown at any altitude up to 9 000 feet, other cereals are wheat, barley and maize Although a comparatively large area is allocated to cereals, the yield is poor and Yemen relies on imports of staple foods A prolonged drought in the years 1968 to 1970 caused the failure of many crops and the resultant famine obliged the Government to import even larger quantities of wheat and cereals The 1971 season is likely to see improved crops, although it will take some time for the farmers to recover, since their stocks of food and grain have been exhausted The highland areas also produce many fruits and vegetables citrus fruits apricots, peaches, grapes, tomatoes and potatoes being the main crops, but others such as cauliflowers lettuces, peas, cucumbers and water melons are being introduced at the instigation of the Ministry of Agriculture The hot Tihama plain produces dates and tobacco and cotton plantations are being established there to form the basis for local industries

The Government plans to introduce Frisian cattle to the upland regions to improve the local stock and breeding stations are being built in Sana'a, Taiz and Hodeda

Although ran is more abundant in Yemen than elsewhere to the Peransiala nevertheless it example to completely relied upon and indeed droughts are frequent Yemen's major concern is therefore, to excluse efficient irrigation and water storage schemes and to utilize the ground water which exists in the Thama.

United Nations assisted schemes are a survey of the Waid Zebid area, projects to develop farming in the highlands and in the Thiama, a pilot project for the development of a sugar cane industry, and the expansion of the Government run model farm near Tax into an agnicultural advisory centre.

An agricultural bank is to be established soon, probably with substantial help from Libva

INDUSTRY

The bandicraft industries—textiles leatherwork, basketry, jewellery and glass making—are beginning to feel the effects of competition from manufacturing mdnstnes in other Arab countries, which threaten the export market for Yemeni goods The towns of Bett el Faqhi Zebid and Hodeada in the Tihama produce textiles of traditional design made front local cotton and indigo dye which, though beautiful, cannot compete in price and durability with modern synthetics and factory-woven fabrics It is likely, however, that the Government will encourage the traditional crafts, particularly if a torust industry can be established Many may well disappear without State patronage

The existing and projected new industries are based in the traditional bandicrafts. There is a state-owned spinning and weaving factory at Sana's, established under an agreement of 1938 between Yennen and China, and completed in 1967. The plant's capacity is about 7 million metres of fabric per year and it employs about 1 100–1500 people, many of them women, supervised and trained by Chinese managers. The Bajil extile factory, set up French and Syrian interests in the 1950s, cincountered financial difficulties and never went into production A United Nations report of 1968 recommended its urgent rehabilitation and repair.

There is a small, privately owned aluminum factory at Taiz bit no information is available on its administration. The rock salt factory at Salif, managed by the Almistry of Economy, utilizes local sali, which is of very high quality, and exports most of its output to Japan Projected industries, at various stages of implementation are a pharmacentrical Plant at Taiz, the Bajil cement factory, a fish cânning factory and a cigarette factory, both at Hodeida.

Minerals known to exist in Yemen are saif, coal, copper def Hamoura near Taul, manble, irm, sublant, lead, and salver, gold and uranium. Algens is to help exploit copper deposits and a joint Algens is to help exploit copper deposits and a joint Algens is to help exploit copper deposits and a joint Algens is to help company, was formed in 1960 to explore for oil in the coastal strip and offsbore. So far no oil has been found, but Yenech, Canadann and Rumannat furna have shown interest in obtaining concessions. The Salit sait deposits are the only minerale exploited at present in any scale. Salt sait decorrs at Marib in the east and at Qumah, near Salif.

COMMUNICATIONS

It is only since the revolution in 1952 that Yemen has established regular links with the outside world, and that good roads have been built connecting the man towns The Sana's-Hodeda road, completed in 1962, was built by Chinese engineers and is a spectacuachievement The Sana's-Sanda road, also built with Chinese aid, was scheduled for completion in 1971. The Sana's-Taux it he Mocha-Taux and the Sana's—Ibb-Taux roads were built with American aid The repair and maintenance of these roads is proving a problem, since neither the equipment nor the personnel are available locally

There are airports at Sana'a, Hodeida and Taiz. Sana'a airport, built by the Russians and now being equipped by West Germany, is capable of taking large aircraft, as is Hodeida, although Taiz is smaller. Yemen has its own airline, Yemen Airlines, and belongs to the International Aviation Union.

A wireless telegraph system exists, dating back to the days of Ottoman rule. The three main towns, Sana'a, Taiz and Hodeida have internal telephone systems and are connected to a number of other towns where telephone exchanges are in operation: Bajil, Ibb, Dhamar, Yerim, Manakha, Zebid, Beit al Faqih and Hais. A six-channel microwave scatter system linking Sana'a and Taiz is being implemented by the United Nations and Sana'a is now linked via Aden with the rest of the world. There are radio transmitters at Sana'a and Taiz and various small wireless communications posts scattered throughout the country. A television system is to be set up by the French firm Thompson-SCF.

FOREIGN TRADE

Yemeni trade statistics at present are unreliable and do not conform to the Standard International Trade Classification. No consistent sets of figures exist giving a complete time series but the United Nations has prepared figures based on the SITC for the years 1964 to 1966 which show a steadily-growing trade deficit. Figures for 1967, 1968 and 1969 are incomplete but further figures issued by the Yemen Bank for Reconstruction and Development for 1970 show that the trade deficit in 1970 was 20.9 million riyals.

Yemen's exports consist entirely of agricultural produce or products of the artisan industries, such as basketry and textiles. Imports of finished goods grew rapidly between 1964 and 1966 and it is likely that this trend will continue. The principal imports are food (particularly in times of drought or famine), vehicles, electrical machinery and petrol. Yemen imports most from Australia, the Soviet Union and France and her main customers are the Soviet Union and Japan. Figures for trade with Yemen P.D.R. are inflated due to transit trade via Aden. The actual volume of trade—178 million riyals worth of imports and 158 million riyals of exports in 1970—is probably rather more than the figures show, since not all trade moves through official channels.

The port of Hodeida is being extended and developed and most trade, particularly from the Eastern Bloc countries, now comes into Yemen through Hodeida, rather than through Aden. The amount of barter trade with the Eastern Bloc is increasing, with China and the Soviet Union taking deliveries of Yemen cotton and coffee in return for aid with industrial projects and the supply of machinery.

FINANCE AND FOREIGN AID

Yemen has a very large budgetary deficit, which in 1968/69 amounted to over 63 million riyals and is expected to amount to over 90 million riyals in 1971/72. The country is having to rely more and more on foreign assistance for development. Extensive aid has been offered by China, the Soviet Union and the United Nations and smaller amounts by Hungary, Yugoslavia, Bulgaria and Romania. Western aid has come mainly from the United States and West Germany and the Arab countries, notably Algeria and Kuwait, are now taking an interest in Yemen, Algeria in oil and mineral exploitation and Kuwait in the agricultural sector through loans from the Kuwait Fund for Arab Economic Development.

Between 1962 and 1969 a total of \$141 million was offered by China, the Soviet Union and the United Nations alone and Yemen has since 1956 accumulated a total debt of about \$190 million. Even so, aid offered has been in excess of aid drawn and many development projects have been held up for years. This was partly due to the uncertain political situation during the years of the Civil War and partly because the riyal was depreciating rapidly, making the use of foreign aid difficult and expensive. There is still no official exchange rate for the Yemeni riyal, but it now appears to have settled at about 13 riyals to the pound sterling, compared with about 3 or 4 riyals to the pound in 1965.

Besides aid for industrial and agricultural development, much practical aid in the fields of health, education and social welfare has been given, particularly by the Chinese and the Russians, the World Health Organization and UNICEF. Kuwait has provided schools, hospitals and clinics but much work still needs to be done to combat the effects of malnutrition and disease. The United Nations has launched a nutrition project aimed at providing school meals and improving the protein content of the average Yemeni's diet.

Lack of data in almost every sector is one of the main obstacles to development in Yemen, greater even than lack of funds in some cases. No aerial survey of the country has ever been done and organizations such as the World Bank are reluctant to assist major projects until concrete data is available.

THE CONSTITUTION

(Published December 28th 1970)

Yemen is an Islamic Arab independent sovereign Republic with parliamentary democracy forming part of the Arab nation Islam is the state religion and Islamic Law the basis of all legislation Sana's is the capital

The Constitution ensures equality of all before the law, freedom of expression press publication public gatherings and trade union activity within the framework of the law. The people are the source of all authority through their representatives in the Consultative Assembly

The Consultative Assembly is composed of 179 members 20 of whom will be appointed by the President and the rest elected by popular franchise every four years. The Assembly shall save laws and regulations for the organization of the state, and approve the state budget and treaties been of the Republican Council will be appointed by the Assembly, and may be withdrawn by a two thirds majority vote of the Assembly.

The Republican Council may present bills to the Council

of Ministers for presentation to the Consultative Assembly Any motion submitted to the Council will require the support of all tests to members and must be endoursed by a two thirds majority. No reports are to be submitted to the President except through the Connaci of Ministers and all laws orders and directions from the President will be sessed through the Council of Ministers.

The Consultative Assembly will nominate the President Drites of the President of the Republic include the signing of legislation approved by the Consultative Assembly

The Council of Manusters, as executive and administrative authority in the state, is responsible siter alia for the execution of plans laid down by the follow up committee of the national peace conference, set up to implement the conference resolutions

The Constitution provides for an independent judiciary, a supreme Sharia Court und local organs of government. Other provisions cover human rights and equality for women.

THE GOVERNMENT

HEAD OF STATE

The functions of this office are discharged by the chairman of the Presidential Council
Republican Council: Abdul Rahman Al Iryani Sheikh

People's Democratic Republic of Yemen

(Southern Yemen)

PHYSICAL AND SOCIAL GEOGRAPHY

On November 30th, 1967, the People's Republic of Southern Yemen came into existence, formed from the former British Colony and Protectorate of Aden (75 sq miles and III,000 sq miles respectively) together with the islands of Perim (5 sq imles) and Kamaran (22 sq miles) Socotra (1 400 sq miles) elected to join the new state. The Kuria Muria group of islands were returned to Muscat by Britain but the new Republican government revoked this decision The capital is As Shaab, formerly known as Al Itthad The state is divided into six governorates which replace the twenty three shelkhdoms and sultanates of the Protectorate. The Republic lies at the sonthern end of the Arabian peninsula approximately between longitude 43° and 56°E, with Perim Island a few miles due west in the strait marking the sonthern extremity of the Red Sea, Kamaran Island some 200 miles north of Perim, Socotra and the Kuria Muna groups in the extreme east the former at the entrance to the Gulf of Aden the latter near the coast of Oman The Republic bas frontiers with Yemen. Saudi Arabia, and Oman, but none of these frontiers is fully delimited, and in some instances they are disputed Atlases still show considerable variation in the precise boundaries of all four territories or sometimes do not indicate them at all

Physically, the Republic of Southern Yemen compases the broken and dislocated southern edge of the great plateau of Arabia. This is an immense mass of ancient granites once forming part of Africa, and covered in many places by shallow, generally borizon tal layers of younger sedimentary rocks. The whole plateau bas undergone downwarping in the east and elevation in the west, so that the highest land (over to ooo ft) occurs in the extreme west, near the Red Sea with a gradual decline to the lowest parts (under 1 000 ft) in the extreme east. The whole of the southern and western coasts of the Republic were formed by a series of enormous fractures, which produced a flat but very narrow coastal plain rising steeply to the hill country a short distance inland Percolation of molten magma along the fracture lines has given rise to a number of volcanic craters, now extinct, and one of these, partly eroded and occupied by the sea, forms the site of Aden port

An important topographic feature is the Wadi Hadhiamaut, an imposing valley running parallel to the coast at 100-150 miles distance inland In its upper and middle parts this valley is broad, and occupied by a seasonal torrent, in its lower (eastern) part it harrows considerably, making a sudden turn south-eastwards and reaching the sea. This lower part is largely uninhabited, but the upper parts, where alliuvial soil and intermittent flood water are available, are occupied by a farming flood factor.

The details of climate in Southern Yemen are simple to state but extremely difficult to explain Rainfall is everywhere scanty, but relatively more abundant on the highlands and in the west Thus Aden itself has 5 in of rain annually, entirely in winter (December-March), whilst in the lowlands of the extreme east. it may rain only once in five or ten years. In the highlands a few miles north of Aden, falls of up to 30 in occur, for the most part during summer, and this rainfall also gradually declines eastwards, giving 15-20 m in the highlands of Dhofar Ultimately, to the north and east, rainfall dimunishes to almost nil, as the edges of the Arabian Desert are reached This unusual situation of a reversal in climatic conditions over a few mules is thought to be the result of two streams of air, an upper one, damp and unstable in summer, and originating in the equatorial regions of East Africa, and a lower current, generally diner and related to conditions prevailing over the rest of the Middle East In this way the low lying coastal areas bave a maximum of rainfall in winter, and the hills of Southern Yemen and the Yemen a maximum in summer Temperatures are everywhere high, particularly on the coastal plain which has a southern aspect mean figures of 76°F (Jan) to 89° (June) occur at Aden town, but maxima of over 100° are common

Except on the higher parts, which have a light covering of thorn scrub (including) dwarf trees which exide a sap from which meense and myrth are denved), and the restricted patches of cultivated land, the territory of Southern Yemen is devoid of vegetation. Cultivation is limited to small level patches of good soil on flat terraces alongsude the river beds, on the floor and sides of the Wach Hadhramaut, or where irrigation from wells and custerns can be practised. The most productive areas are Labej, close to Aden town, two districts near Alukalla [about 300 miles east of Aden), and parts of the middle Hadhramaut. Irrigation from custerns bollowed out of the rock has long been practised, and Aden town has a famous system of this kind, dating back many centuries

WBF.

HISTORY

ADEN COLONY

When the Portuguese first rounded the Cape of Good Hope (1497–98), Aden was a port of some commercial importance, acting as a rendezvous for ships bound from India to the Red Sea and at the same time enjoying an active local trade with the Persian Gulf and the coast of East Africa. In 1513 the Portuguese, under Albuquerque, tried to capture the town, though without success. The Ottoman Turks, in their endeavour to deny the Portuguese access to the Red Sea, seized Aden in 1538, but their hold on the Yemen proved to be precarious. There was a serious revolt against the Ottoman regime in 1547-51 and a still more dangerous rebellion in 1566-70. When in the course of the seventeenth century the Ottoman state fell into decline, the authority of the Sultan over this distant region became little more than nominal, effective power in the Yemen passing now into the hands of local chieftains, the most notable of whom, after 1735, was the Sultan of Lahej. The discovery of the Cape route to India had greatly diminished the prosperity of Aden as a commercial entrepot, but with the Napoleonic campaign in Egypt in 1798, Aden assumed strategie importance in Britain's plan of containment. In 1799 Britain occupied the island of Perim. Shortage of water compelled a withdrawal to the mainland where friendly relations were established with the Sultan of Lahej with whom later in 1902 a commercial treaty was concluded. However, the need to possess a base in these waters under the British flag doubled with the coming of the steamship. Negotiations began for the purchase of the island of Socotra, which in 1834 was temporarily occupied by the East India Company; they might have succeeded had not the relations with the Sultan suddenly deteriorated in 1837 following the plunder near Aden of a wrecked Indian vessel flying the British flag. The incident was followed by the despatch by the East India Company of a British force from Bombay, under the command of Captain Haines of the Indian navy, which, on January 16th, 1839, captured Aden. By the peace treaty, the Sultan was guaranteed an annual sum of 6,000 dollars and Aden became part of the British Empire, administered by the government of Bombay. The Sultan did not finally abandon his efforts to regain Aden until 1857 when permanent peace was established with Britain. Perim Island was ceded in the same year. The Kuria Muria Islands had already been acquired in 1854 from the Sultan of Oman. With the opening of the Suez Canal and the revival of the Red Sea route, Aden, which had been a free port since 1853, increased in importance. In the twentieth century, with the gradual replacement of coal by oil, Aden, closely linked to the Persian Gulf area, enhanced its historic position as a fuelling station. Aden's strategie value is also based on plentiful supplies of fresh drinking water from the artesian wells at Shaikh Othman.

In 1932, the administration of Aden passed to the Governor-General of India in Council; in April 1937,

it was vested in a separately appointed governor, who was also commander-in-chief, and who was assisted by an Executive Council. Crown Colony status had in fact been granted two years previously by the Government of India Act 1935. A Legislative Council for Aden, granted in 1944, was inaugurated in 1947. In 1955 the Aden Colony (Amendment) Order came into force, providing for an elected element in the Council; the first elections were held in December of the same year. Further constitutional changes were made in 1959. On January 4th, 1959, voting took place for the choice of 12 elected members of the Legislative Council. Nine Arabs, 2 Somalis and 1 Indian were elected to the Council. Large numbers of the Arab population boycotted the election.

On January 16th, 1961, Sir Charles Johnston, the Governor of Aden, announced to the Legislative Council of Aden that the (then) Colonial Secretary, Mr. Macleod, had approved a ministerial system of government for Aden and that members of the Executive Council in charge of administrative departments would soon assume ministerial status. The Governor also spoke of a possible closer association with the West Aden Protectorate and in particular with the Federation of Arab Emirates in the South. The Federation was renamed the Federation of South Arabia in April 1962. On November 27th, 1967, Aden and the Federation of South Arabia achieved independence under the name of the People's Republic of Southern Yemen.

SOUTH ARABIAN PROTECTORATE

Behind Aden and stretching some 600 miles along the coast, are the territories of 23 Arab States, whose rulers, between 1882-1914, entered into protective treaty relations with the British Government and acknowledged the authority of the Governor of Aden as Governor of the Protectorate. Many of the States later entered into closer treaty relations, and, while retaining independent control in the internal affairs of their respective territories, the rulers accepted the advice on administration offered by British Agents and Political Officers appointed by the Governor. Britain guaranteed protection to the States and they agreed not to cede territory to foreign powers.

EASTERN PROTECTORATE STATES

Formerly named the Eastern Aden Protectorate, the region covered by the States comprised the Hadhramaut (consisting of the Qu'aiti State of Shihr and Mukalla, and the Kathiri State of Sai'un), the Mahra Snltanate of Qishn and Socotra, the Wahidi Sultanates of Balhaf and Bir'ali, and the Sheikhdoms of Irqa and Haura. At the end of 1960 the total population of the area was estimated at 305,000. The Qu'aiti Sultan first concluded a protectorate treaty with Britain in 1888. In 1918 following an agreement between the Qu'aiti and the Kathiri Sultans, the latter accepted

the protectorate treaty as extending to his State Both Sultains agreed by further treaties signed in 1937 and 1938 to accept the advice of a British Agent in all matters except those concerning the religion and custom of Islam The British Agent for the Eastern Protectorate States was stationed at Mukalla to the territory of the pretimer clief the Qu ant Sultain of Shirk and Mukalla Both he and the Kathiri Sultain were constitutional rulers and were assisted by State Councils Close co-operation existed between the two states in constitutional and in economic matters

In 1949 an advisory treaty was concluded with the Wahid Sultan of Balhaf The Mahra Sultan of Qishn and Socotta signed a treaty of protection with Britan in 1866 and by it the Island of Socotra and the Abd Alkini and Brothers Islands came within the protectorate

WESTERN PROTECTORATE STATES

The former Western Protectorate comprised 20 states Population at the end of 1950 was estimated at 355 000 Five of the States in 1944 and 1945 agreed by advasory treaties with Britain to accept the advice of the Governor of Aden on administrative affairs—the Fadhli the Lower Adapt and the Lower Yasi Sulana the Sheri of Beihan and the Amur of Dhala In 1932 similar treaties were signed by the Upper Anlang Sheikh and the Avidant Sultan and 1900 the 1900 Proceedings of the States of the States and 1900 the States and 1900 the States and 1900 the Avidant Sultan and 1900 the States and the Arab Assistant Political Officers and the Arab Assistant Political Officers and the Arab Assistant Political Officers for the Western Protectorate States were under the supervis on of the Assistant High Commissioner whose headquarters were in All Itthad the Federal capital

The British authorities in 1954 and again in 1956 had discussed a plan of federation with local rulers in the West Aden Protectorate On February 11th 1959 the rulers of six (out of 20) states in the Western Protectorate signed a Federal Constitution and also a Treaty of Friendship and Protection with Great British The British Government promised financial and military aid which would assist the Federation (embracing Audhali Lower Yafa i Fadhh Dhala B ihan and Upper Aulaqi) to become eventually an independent state. The members of the Federation bound themselves not to enter into foreign relations of whatsoever kind without the approval of Great Britain Lake joined the Federation in October 1959 and Lower Aulaqu Aqrabt and Dathina in February 1960 The Wahidi States of Balhaf and Bir Ali in the Eastern Aden Protectorate joined in 1962 Aden Colony became a member in January 1963 and Haushabi and Shaib joined in April In 1965 there were three further accessions the Alawi and Muffahi Sheikhdoms and the Upper Aulaqi Sultanate The new Federal capital was Al Ittihad near Bir Ahmed

The UK met the cost of defence including the RAF and Protectorate levy establishments Beside the security forces maintained by the UK Govern ment there were tribal guards in the Western States partially supported by the States and the Mukalla Regular Army maintained by the Qu art State

At the end of November 1961 the British Govern ment handed over control of the Aden Protectorate Leyes to the Federation of Arab Emirates in the South The Levies—which would be henceforth the Army of the Federation—had been formed in 1928 to protect Aden on the landward side and to provide garrisons for the Red Sea islands of Perim and Kamaran An Arab force trained and commanded by British officers the Levies consisted in 1961 of five infantry battalions an armoured car squadron and various signals and administrative units The Levies came under the control of the Sultan of Labej who was Minister of Defeore to the Federation hut command of the force still rested in the hands of a British officer as hitherto for operational purposes the Levies were at the disposal of the GOC Land Forces Middle East

ADEN AND THE YEMEN

Relations between the Protectorate and the neigh bouring State of the Yemen were at all times delicate Frequent encroachments led to the demarcation of frontiers which were accepted in a convention signed with the Ottoman government in March 1914 During the first World War the Turkish troops from Yemen occupied the greater part of the Protectorate and though in 1919 most of the chiefs resumed their treaty relations with Britain the Imam of Sana a who exercised the principal religious authority in Yemen being the most powerful of the Chieftains maintained his claim to the entire territories. He sought to enforce it by occupying the Amiri district including the Radhfan tribes and parts of Haushahi Shaihi and Upper Yafa i territory and the Audhali plateau He also occupied territory not then within the Protectorate the district of the Beidha Sultan. Britain cootinually repelled the Imam's advance and in 1928 he was compelled to withdraw from most of the Amura territory The Anglo-Yemenite treaty of peace and friendship was signed in February 1934 and was to be valid for 40 years the two powers agreed to respect the status one and to negotiate for the classification of frontiers Britain recognised the independence of the Yemen and the Imam agreed to evacuate the remain der of the Amin district In 1950 they agreed further to set up a frontier commission and to exchange diplomatic missions. In 1953 Yemen pressed her claims to the territories of the Aden Protectorate before the United Nations and in subsequent years there was a series of border incidents. In December 1956 both tribesmen and Yemeni forces were reported to have raided villages in the Protectorate and made invasions note Western Aden Similar incidents of varying degrees of importance continued until 1959 During this period there was a substantial flow of arms and technicians into the Yemen from the USSR and its alhes and in March 1958 a formal union with the U.A R was announced Britain sent troop reinforce ments and RAF units to repel these attacks and in 1958 it established a separate military command in Aden Oo two occas ons the Yemen brought the dispute before the United Nations on the grounds that the UK was committing acts of aggression against her territory

locidents along the ill defined frontier between Aden and the Yemen became less numerous in 1959

PEOPLE'S DEMOCRATIC REPUBLIC OF YEMEN-(HISTORY)

The Governor of Aden paid a visit to Taiz in November 1959 which led to the conclusion of two informal agreements with the Yemen, the first covering civil aircraft flights between Aden and the Yemen, the second establishing local frontier commissions to settle border incidents. The first frontier commission met in February 1960.

In August 1962 the Yemen denounced the agreements reached at the London conference (discussed below), and reiterated its elaim to the Aden territories. The revolution which broke out in the Yemen on September 27th, 1962, led to the establishment of a Republic of the Yemen. Colonel Sallal, the leader of the revolution, stated at this time that the new régime did not intend to press a elaim to the Aden territories and hoped indeed for friendship with Britain. The U.S.S.R. and the U.A.R. recognized the republican régime almost immediately, and the United States followed suit in December, but Britain refused recognition. The new Yemen government frequently accused Britain of giving assistance to the Royalist resistance during the winter of 1962-63; the British legation at Taiz was closed, there were several minor conflicts in the border area, and another Yemen protest was made at the U.N.

British and Federal forces carried out extensive military operations against dissident border tribesmen in 1964 and 1965; officials claimed these measures were necessary mainly because of unrest created by Yemeni agents. Direct clashes with Yemeni forces also occurred; the situation remained complex owing to the continuing presence of Royalist forces in the area. In 1964 Britain proposed that UN observers should patrol the border areas; the republican government, however, would not accept this, claiming that no frontier was necessary as Aden and the Federation all belonged by right to the Yemen. This attitude did not help relations during the independence negotiations or with the new Southern Yemen government.

CONSTITUTIONAL DEVELOPMENTS

In August 1960 Sir Charles Johnston became Governor of Aden in succession to Sir William Luce. The new Governor announced to the Legislative Council of the Aden Colony in January 1961 that a ministerial system was to be introduced into Aden—members of the Executive Council in charge of administrative departments (twelve in all) would soon assume ministerial status. Sir Charles Johnston also noted that efforts were in progress to promote constitutional development within Aden and in particular to bring about a closer association between the West Aden Protectorate and the Federation of Arab Emirates of the South.

A constitutional conference, which included five Ministers from Aden and five from the Federation, met in London (July-August 1962) under the chairmanship of Mr. Dunean Sandys, the Colonial Secretary. The Aden Trade Union Congress and its political wing, the People's Socialist Party (both counted much on the support of Yemenis who worked in Aden, and aimed at the ultimate union of the

Yemen, Aden, the Federation and the other territories of the West Aden Protectorate) denounced the conference held in London. On July 23rd, 1962, they called a strike to protest against the composition of the existing Legislative Council of Aden and to demand a general election and the establishment of an autonomous government in Aden before further progress should be made towards union with the Federation of Arab Emirates.

The discussions undertaken in August 1962 led to a White Paper recommending the incorporation of Aden into the Federation as a constituent state. It specified that Britain would retain sovereignty over Aden and responsibility for its defence and internal security. These proposals were the principal features of a draft treaty between Britain and the Federation (re-named the Federation of South Arabia); Perim and the Kuria Muria islands, although administered by the governor of Aden, were to be excluded.

There was considerable opposition in Aden to incorporation into the Federation. Several political parties opposed the move, and strikes and demonstrations directed against it occurred throughout 1962. Serious riots coincided with the Aden Legislative Council's passing of the draft treaty in September. Nevertheless, Britain and the Federation duly signed the agreement in January 1963 and Aden formally became a member of the Federation later that month,

ADEN'S INCORPORATION IN THE FEDERATION

Aden's new government consisted of a nine-member Council of Ministers, all Adenis except for the British Attorney-General. Since its principal economic support remained British forces expenditure—£20 million was spent on capital projects alone in the 1962-65 period-it could hardly expect to escape the suspicions of the radical Arab nationalist movements. In May 1963 representatives of the United Nations Committee on decolonization visited Yemen but were not allowed into Aden or the Federation. In July they issued a report—later adopted by the full committee and eventually the General Assembly—which claimed that most of the population disliked "the repressive laws and police inethods" of the government; it accused Britain of attempting to prolong its control whilst most South Arabians wanted union with the Yemen. Britain, of eourse, rejected the report. In the meantime two more states—the Haushabi Sultanate and the Shaibi Sheikdom—had joined the Federation, now 14 strong; on April 1st all customs barriers were abolished within the Federation, Aden remaining a free port.

In December 1963 an attempt to assassinate the High Commissioner in Aden killed two people and injured over fifty; a state of emergency was declared and large numbers of political activists were detained. Although no charges were made, several weeks elapsed before many activists were released, and much opinion in Aden and beyond clearly thought this police treatment was too harsh.

MOVES TOWARDS INDEPENDENCE

In June 1964 a constitutional conference was held in London and an agreement was signed whereby the Federation of Saudi Arabia, inclusive of Aden, would become independent not later than 1968 A further conference should have met in London in March 1965 to further these proposals, but a clash of interests between Britain, the Federal Government of South Arabia and the Government of the State of Aden, together with the rivalry between local political parties in Adea and threats from the "National Front for the Liberation of South Yemen", prevented the holding of this conference.

Further discussions took place in London in August 1965, but the talks failed, and violence in Aden increased It was estimated that between December 1963 and May 1966 60 people had been killed and 350 mjured in Aden alone as a result of terrorism, one third of the casualties heine British

POLITICAL REALIGNMENTS

The political scene in South Arabia, as viewed from the side of the nationalist elements, presented at this time an appearance of increasing confusion The People's Socialist Party, led by Mr Abdallah al-Asnag, bad merged, in May 1965, with the Committee for the Laberation of Occupied South Yemen and with the South Arabian League to form the Organization for the Liberation of the Occupied South A further development took place in January 1966, when the Organization for the Liberation of the Occupied South united with the National Front for the Liberation of the Occupied South, an extremist group operating from the Yemen with Egyptian support and responsible for the campaign of terrorism in Aden Out of this new fusion of interests came the Front for the Liberation of Occupied South Yemen (F L O S Y), in which political figures like Mr Makkawi and Mr al Asnag now began to assume positions of prominence The South Arabian League, however, declined to accept the prospect of complete absorption in a united nationalist movement and resumed its former mdependence As an organization it held moderate nationalist views, rejecting the territorial claims of the Yemen, disapproving of terrorism and of influence emanating from Egypt, and aiming in general at a united state of South Arabia which should embrace Aden, the federal states and also the principalities of the East Aden Protectorate Over against these various nationalist forces stood the "traditionalist" elements, embodied in the sheikhdoms and sultanates of the South Arabia Federation (and also of the East Aden Protectorate)

Of great importance, too, as a factor inflinencing the affairs of South Araha was the situation in the Yemen, itself divided between tribesimen loyal to the old limanate and supported by Sauth Araba, and the republican regime maintained and controlled by Egypt—a situation, in short, which reflected in itself the confrontation of Egypt and Saudh Araba for a dominant voice in the affairs of Araba as a whole

NEW PROPOSALS FOR AGEN, 1966

The Federation of South Araba made known in February 1966, proposals which, it was hoped, might serve as a bass for a constitution when South Araba gained independence in 1958 At the request of the Federal Government in September 1965, two British experts, Sir Ralph Hone and Sir Gawan Bell, had undertaken the task of framing new proposals. Their recommendations now envisaged the creation of a United Republic of South Araba (including the Hadhramant area). The republic would be organized on federal lines. Aden, however, together with the federal capital al-Hithhad and the islands of Perin, Kamaran and Kuria Muna, would form within the republic would stimutely expended to the standard of the sta

THE DEFENCE QUESTION

In February 1966 the British Government issued a White Paper on Defence, which envolvaged large reductions in the use of the armed forces of Great Britain overseas and in the general evpenditure on them The White Paper declared that, when Aden became independent in 1963, all British forces would be withdrawn and concentrated at Bahrain in the Persian Gulf, it also made known that the British Government did not propose to enter into defence agreements with the newly independent state of South Arabia

This announcement gave grounds for alarm to the sheighdoms and sultanates embraced within the Federation that the National Guard of the Federation might be confronted in the future with a Yemen able to call on large numbers of Egyptian troops The federal authorities sent a delegation to London, hoping to persuade the British Government to at least assist with the rapid strengthening of the federal forces and with the provision of equipment In June the British Government offered to contribute as much as 15,500,000 towards the capital cost of expanding and re-equipping the armed forces of the Federation It also declared its readiness to continue its contribution (about £5,000,000) to the federal budget each year and to increase, to the extent of some £2,500 000, its share (hitherto about £4 600,000) in the maintenance of the federal troops This aid was to continue for three years after independence, provided that no radical change occurred in the political situation of an independent South Arabia The British Government still declined. however, to undertake the defence of South Arabia after it had won independence

The extreme nationalist organizations had long advocated the acceptance in full of the UN resolutions passed in December 1963 Now, in May 1966, the Federal Government of South Arabia made known its readmess at last to take the resolutions as a basis for future action.

THE UN MISSION

In June 1966 the UN Committee on Colonialism urged that a United Nations Mission be sent to South Arabaa to advise on the hest means of giving effect to the UN resolutions of 1963 and 1965, resolutions which envisaged the granting of independence to South

Arabia, the withdrawal of British forces, the return of political leaders in exile or in detention and the holding of elections under international supervision. In August 1966 the British Government declared that it welcomed the appointment of such a mission, but it insisted that it could not abandon its responsibilities for the maintenance of good order in South Arabia and that it was bound to observe the agreements which it had made with the local states existing in the area.

Further violence and demonstrations in Aden in February 1967 perhaps hastened the actual appointment, on February 23rd, of the UN Mission to South Arabia to be led by Señor Manuel Pérez-Guerrero, of Venezuela; his two colleagues were Mr. Abd al-Satar Shalizi, of Afghanistan, and Mr. Moussa Léo Keita, of Mali. On April 2nd, 1967, the UN mission arrived in Aden, where violence continued, after passing through London, Cairo and Jeddah. On April 7th the UN mission, accusing the British and the federal authorities of non-co-operation, left Aden for Rome and then Geneva, their task remaining unaccomplished. Their talks later in the month with the British Foreign Minister led to no fruitful result.

PREPARATIONS FOR INDEPENDENCE

Also in April Lord Shackleton, Minister without Portfolio, was sent to South Arabia to assist the High Commissioner in examining the possibilities for the establishment of a "caretaker" regime representing all the interested elements in South Arabia. The nationalist organizations continued, however, to reject all appeals for co-operation with the British and the federal authorities.

On June 20th, 1967, the British Government made known the measures that it intended to bring into effect. The date of independence was to be January 9th, 1968. During the critical months following the grant of independence a naval force, including an attack carrier, was to be assigned to South Arabian waters; a number of V-bombers would also be stationed on the island of Masira, not far from the South Arabian territories. In addition, Great Britain promised financial aid (for aircraft, amongst other items) and undertook to re-equip the federal forces with more modern types of small arms, field guns and armoured cars. A military mission would also be sent from Great Britain to advise the federal authorities. In order to check the growing violence in South Arabia it was proposed to suspend trial by jury in respect of terrorist activities. On the other hand, the ban on the N.L.F. was to be removed and consideration given to the possible release of some detainees. The British Government also declared that it would be willing to accept a draft constitution which the federal regime was now circulating to its member states. This constitution would prepare the ground for eventual elections on a basis of universal adult suffrage and for the establishment, as soon as circumstances allowed, of an administration representative of all the political elements in South Arabia. Regarding the problem of the uncommitted states in the East Aden Protectorate, Great Britain favoured their union

with the Federation of South Arabia. It seemed improbable, however, that such a merger, if it did indeed come about, would occur before South Arabia attained its independence. The British Government now made known its readiness to finance, for a period of two years after January 1968, the Hadhrami Legion, an Arab force at present British-paid and British controlled and constituting the main defence of the Eastern Protectorate. Measures would be taken to assist with the establishment of co-ordinated defence arrangements between the Federation and the three states of the East Aden Protectorate.

The tense situation prevailing in Aden became still more complicated when, on June 21st, 1967, some of the South Arabian federal troops mutinied and fought out with the British force a battle which involved considerable loss of life. This trouble was said to have arisen out of tribal rivalries affecting the federal forces, but the suspicion could not be excluded that, under the impact of nationalist sentiments, some of the troops might have weakened in their allegiance both towards the federal regime and towards the protecting power.

During July 1967 Britain continued her efforts to establish in Aden and the associated territories a broad-based provisional administration which should hold office until the moment of independence in January 1968. To facilitate the achievement of this aim the Federal Government consented to invite one of its own members, Mr. Bayumi, to form an interim administration with the aid, if possible, of F.L.O.S.Y. and the N.L.F. These nationalist organizations remained adamant, however, in their refusal to recognize the federal regime, which, in their view, reflected in its structure pre-eminently the interests of the local sultans. Mr. Bayumi's endeavour to gain the cooperation of the nationalist groups ended in failure and on July 27th the federal authorities relieved him of his appointment as Prime Minister designate.

Meanwhile, in South Arabia itself, during August to October 1967 the authority of the sultans crumbled rapidly before the advancing tide of nationalism. The N.L.F. extended its control over the sheikhdom of Maflahi and over most of the other tribal states. On August 28th Sheikh Ali Musaid al-Babakri, speaking as chairman of the Supreme Council of the South Arabian Federation, admitted that the Federal Government and the Sultans had lost control of events and appealed to the armed forces of South Arabia to take command of the situation. This appeal—which marked in fact the virtual disintegration of the federal regime—was unsuccessful, the South Arabian Army refusing to accept the role thus offered to it. The swift advance of the N.L.F. was due, not least of all, to the alignment on its side of a large measure of support amongst the local tribes against their traditional rulers, and also to the determination of the federal armed forces to maintain a neutral attitude. During September and October the N.L.F. also moved into the territories of the Eastern Aden Protectorate, the sultanates of Qaiti, Kathiri and Mahra now passing under its influence. The High Commissioner announced on September 5th that Britain was now prepared to recognize the nationalist forces in general as representative of the local populations and would be willing to enter into negotiations with them

THE CLASH BETWEEN NATIONALISTS

The collapse of the federal regime left the main nationalist organizations face to face There had been discussions between them under Egyptian anspices at Caro and in the Yemen, but without much sign of ultimate agreement Now, the notable success of the N.L.F. had done much to diminish the prospect before the Front for the Liberation of the Occupied South Yemen. This latter organization was under the dis. advantage that it operated largely under Egyptian guidance and not in South Arabia itself, but from the Vemen Its chief support in Aden had come from the numerous Yemeni elements formerly working there Of adverse effect, too, was the fact that its leaders Abdallah al Asnag and Abd al Qawi Makkawi, had been working from the Yemen as exiles during the past two years The imminence of an Egyptian with drawal from the Yemen also contributed to a decline in its influence

With the federal structure now in ruins the immediate question was whether or not the two main nationalist groups could be brought into immittal cooperation. Conflict soon broke out, however, between them and ficroe fighting developed in the northern suburbs of Aden during September The South Arabian Army was able to enforce a binef cease fire, and the rival organizations met in Camo in October, but without any agreement Fresh fighting then began FLOSY being finally defeated when the Army high command jouned forces with the NL r

The latter then insisted that Britain should regard it as the sole valid representative of the people of South Arabia—a course of action which the authorities in London agreed to take on November 11th, 1967 On November 14th it was announced at Aden that Qahtan al Shaabi, one of the founders of the N L F would lead a delegation to Geneva to hold discussions with the representatives of Britain

The evacuation of British troops from Aden had begun earlier on August 25th, 1967 As the situation unfolded itself in Aden, the British Government resolved to hasten the withdrawal of its forces and to advance the independence of South Arabia from January 9th, 1968, to a date if possible in the second half of November 1967 On November 27th after the British troops had made over large areas of Aden to the armed forces of South Arabia, the NLF proclaimed the creation of the People's Republic of Southern Yemen At Geneva, Qahtan al Shaaln announced on November 28th that agreement had been reached with Great Britain over the cession of Aden and its associated territories. The last British troops in Aden were withdrawn on November 29th. 1967 Qahtan al Shaabi, with the approval of the NLF, was appointed the first President of the Republic on November 30th

SOUTHERN YEMEN 1967-70

The prospect before the new Republic in December 1967 was still a most uncertain one On the economic side there were great difficulties to be overcome The withdrawal of the British troops meant a serious loss of revenue To maintain the armed forces inherited from the era of British control would impose on the Republic a large expenditure Moreover, the closure of the Sucz Canal had brought about a great falling off in the entrepôt trade of Aden and in the bunkering of ships The continuance in the immediate future, of financial aid from Britain was therefore of prime importance to the new regime in Aden. During the negotiations in Geneva between Britain and the N L F in November 1967 the British representatives agreed to make available financial aid to South Arabia for a period of six months (December 1st, 1967, to May 31st, 1968) at a rate amounting to about £2 milhon per month Talks held in Aden in April 1968 between a British delegation and the government led only to the rejection of a new, though reduced, offer of In ther financial assistance from Britain

There was disagreement also between the South Yemen and Britain over the Kuria Muria Islands These islands, about 40 miles from the south coast of Arahas and 200 miles east of the border between the Republic of the Southern Yemen and the Sultanate of Minesat, had been handed over to Britain in 1854 and, though administered subsequently from Aden, had not been included formally writhin the Aden Protectorate On November 30th 1967, Britain had made known to the United Nations her intention to restore the Kuria Muria Islands to the Sultain of Museat—a decision which gave use to much hitteness amongst the members of the new government in Aden which continued to claim these islands and also Perim and Kamaran

The administration of President al Shaabi had to meet other serious difficulties also. In the first months of 1968 it had carried out a series of "purges" in the armed forces and the police of the Southern Yemen Discontent amongst the armed forces increased after the annual conference of the NLF convened at Zinjibar, east of Aden, in March 1968 The more extreme elements in the N L F were reported to have put forward at the conference resolutions designed to force the Government of the Southern Yemen further to the left-amongst them resolutions calling for the appointment of political commissars to all army units, for the strengthening of the N.L.F militia and for the creation of 'popular guards' A demand was also made, it would seem, at this conference for the establishment of popular councils in all six of the governorates of the Southern Yemen—these provincial councils having the right to elect a supreme council which would control the affairs of the new Republic There was in March 1968 a real danger of conflict between the moderate and the extreme elements in the NLF On March 20th the army indeed intervened to bring about the dismissal of several ministers identified with the more radical section of the Front The extremists indeed had been taking matters into their own hands in the eastern areas of the Republic-above all in the fifth and sixth governorates which embrace the former

PEOPLE'S DEMOCRATIC REPUBLIC OF YEMEN—(HISTORY)

sultanates of Qaiti, Kathiri and Mahra (i.e. the erst-while Eastern Aden Protectorate). Here the radical elements had established popular councils of their own choice, ignoring the governors appointed from the central regime, ousting members of the armed forces and the police, and seizing the oil installations at Mukalla. The tensions thus generated showed no sign of a rapid abatement. Indeed, on May 15th, 1968, there was a short-lived rebellion in the region of Jaar, Abyan and Shuqra—i.e. in the third governorate to the north-east of Aden.

In June relations with Britain deteriorated, mainly over the question of the £12 million aid the latter had promised the new government. This money was due to have been paid by April, but in fact a substantial balance remained; from this Britain proposed to deduct a considerable sum to compensate British citizens dismissed by the new government.

Another more serious uprising occurred at the end of July 1968, when two groups of armed rebels cut roads in the Radfan and Aulaqi districts north and east of Aden. The leaders of this rebellion were named as Colonel Abdullah Saleh al Aulaqi ("Colonel Sabaa"), formerly the N.L.F. commander of security forces, and Brig. Nasser Buraik al Aulaqi, who until independence had been commander of the South Arabian Army. These risings were quickly crushed by N.L.F. forces. Both F.L.O.S.Y. and the rival exiled political organization the South Arabian League claimed credit for this threat to the government of President al-Shaabi. Although several members of the F.L.O.S.Y. High Command were captured during the campaign, the economic difficulties of the country continued to act as a serious threat to the stability of the new regime. These difficulties enforced drastic cuts in government expenditure during the summer of 1968, notably in the salaries of the armed forces and the civil service, which cannot have helped the regime's popularity. The President did succeed in getting offers of aid from Federal Germany, Yugoslavia and several Arab countries, but on a small scale compared with the pre-independence British assistance. All support from Federal Germany was in any case cancelled following Southern Yemen's recognition of the German Democratic Republic (East Germany) in July 1969.

Relations with neighbouring states continued to be poor, and the government blamed all unrest within the country on elements operating from these states. F.L.O.S.Y., operating from Yemen and now without its Egyptian support, the deposed sheikhs and sultans from the Federation (now mostly in Saudi Arabia), and the Sultan of Muscat and Oman with his British advisers were claimed to be the most important of these. There were reports of large supplies of Soviet military equipment reaching Aden, some of which has been displayed in military parades; units of the Soviet fleet frequently visit Aden, which is now rarely used by British or other Western naval vessels.

In June 1969 President al-Shaabi resigned following a reported power struggle; Salem Rubayyi, a former commando leader who had gone into semi-exile in the provinces after a dispute with the leadership, came to power as Chairman of a new five-man Presidential committee, and a new cabinet was formed which included several other exiles. The new regime was seen as even more left wing and pro-Soviet than its predecessor.

In November 1969 the government announced the nationalization of 36 foreign firms, including shipping, insurance and commercial companies, but excluding the BP oil refinery at Little Aden.

At this time there were reports of Saudi troops massing on the ill-defined frontier with S. Yemen, and Saudi sources claimed that an extensive battle took place in December, with Saudi Arabia emerging victorious. Some reports claimed that the clash took place over oil-bearing territory. This occurred again in March 1970 and coincided with a report of an attempted coup d'état in Aden.

In November 1970, a new Constitution was promulgated, changing the name of the country to the People's Democratic Republic of the Yemen, with a view to possible Yemeni unity.

v.j.p.

ECONOMIC SURVEY

The People's Democratic Republic of Yemen consists of the former British colony of Aden and the former Eastern and Western Aden Protectorates It is now divided into six governorates or provinces whose finances and administration are centrally controlled although the provincial councils are respon sible for planning and finance on a local level The Governorates vary greatly in size, the smallest being the First Governorate in the west, consisting of Aden district and the offshore islands, and the largest being the Sixth Governorate, the former Mahra Sultanate situated in the extreme east of the country Most of the population is concentrated in the west and one of the Government's hardest tasks since independence has been to unite the various regions politically, administratively and economically

Under British rule, the country was sustained by the position of Aden on the main shipping route to Europe from the Far East, India and East Africa via Suez The British Petroleum refinery, completed in 1054 was the focus of industry and trade. In addition the British troops stationed in Aden and the many foreign visitors who came ashore from ships calling at the port provided a market for services and luxury goods which encouraged local merchants and entrepreneurs and brought plenty of foreign exchange into Aden This prospenty was in the main confined to the then Aden Colony where there was a boom in construction work between 1955 and 1965 The British Government was more concerned with mainturing the Aden base and the port installations than with developing the hinterland although certain agricultural areas were developed during this period. The Abyan district, where development started in 1947, became one of the major cotton producing areas and a similar scheme was carried out in Lahei in the 1960s In the Hadhramaut, where there are fertile valleys in an otherwise barren area the Governments of the states of Quarti and Kathiri financed irrigation schemes and agricultural developments

The closure of the Suez Canal in 1967 and the withdrawal of British troops in the same year, put an end to Southern Yemen's commercial prosperity Further more British aid and military expenditure, which amounted to about £11 million in 1960 and had increased to £36 million by 1967 and had more than covered the visible trade deficit was discontinued after withdrawal making it impossible to the Government to cover the budget deficit. In such a situation Southern Yemen had no choice but to turn to other countries for sources of finance and technical aid to assist it in the transition from a service economy to one based on agriculture and manufacturing. The favourable terms offered by the Communist countries coupled with a seeming lack of interest on the part of the West, made it inevitable that Southern Yemen should turn to the Eastern Bloc

In November 1969 a decree was issued nationalizing all important foreign assets in Southern Yemen with

the exception of the BP refinery. This development, although a logical one in view of the regime's socialist learnings nevertheless tended to frighten off firms which might otherwise have risked some investment, and made Southern Yeinen more than ever dependent on the Soutet Union China and East Germany.

The Three Year Development Plan 1971-1974, although imited by shortage of funds, aims at the creation firstly of a communications network, secondly the expansion of agricultural production and, thirdly the establishment of small scale light industries based on locally praduced raw materials

AGRICULTURE

Only about a quarter of Southern Yemen a cultivatable land is used at present, and the most intensively cultivated areas are Abyan, east of Aden and Laley, north of Aden The river valleys of the Hadhramaut area in the Fifth Governorate are also fertile and relatively well-developed

Cotton is produced mainly in Labej and Abyan The government-controlled Abyan Board supervises the whole process of growing and marketing and has its own ginnery at El Kad Cotton is also produced in other areas and the Cotton Producers' Associations are the most Bourshing co operatives in the country The area under cotton is bowever, declining, in spite of cash incentives offered in growers it is also becoming barder to market and much work needs to be done to improve the varieties grown and to seek suitable export outlets

Southern Yemen is able, in the whole, to meet local demand for most vegetables but imports omons, potatoes and fruit The main fruits and vegetables grown are tomatoes, carrots salad vegetables, bananas and melons Bananas in particular are produced in quantity and the Food and Agriculture Organization has recommended an expansion of banana-growing, provided export markets can be found.

Wheat is grown mainly in the Hadhramant and Behan but is not enough for the country's needs The balance is imported mainly from Australia Other cereals produced include barley, millet and sorghum Tolacco is grown in the coastal sreas, mainly in the Ghail Ba Wazir area Livestock production has remained fairly static for the last ten years and con siderable numbers of sheep and goats have to be imported to satisfy local meat demand.

The Government plans to merease the cultivated area by about 8 per cent by 1974 and to expand production if crops and livestock by 26 per cent and 20 per cent respectively. The resources available at present are not sufficient to finance agricultural development schemes over the whole country and efforts are being concentrated in the Labey, Abyan Beiban and Hadhramaut areas In the east, the developments most likely to take place are the

expansion of tobacco growing and the development of the fishing industry, with Mukalla as its centre.

FISHERIES

The Arabian Sea fishing grounds are Southern Yemen's greatest potential source of wealth. Most of the 10,000 fishermen fish only in territorial waters, their equipment is often poor and efficient marketing of the catch is impossible with the present state of communications. The main species caught are: anchovy, tunny, sardine, Indian mackerel, crayfish and green turtle.

The Soviet Union is providing modern fishing vessels and technical aid, the United Nations is resuming its three-year fisheries survey, begun in 1966 but interrupted in 1967, and a Japanese firm obtained a contract in 1969 to fish in Yemeni coastal waters.

INDUSTRY

The BP refinery accounts at present for over 80 per cent of Southern Yemen's total industrial output. In spite of the closure of the Suez Canal, output at the refinery has continued to expand, partly because of increased demand from the U.A.R., although exports to the U.A.R. decreased in 1970. In 1966, bunkering made up a third of total exports, but by 1970 this proportion had fallen to less than 7 per cent and exports were moving to markets in Africa and Asia rather than Europe. Further expansion of the refinery is unlikely in the immediate future.

Industrial developments are planned to take the form of agro-industries. The Development Plan envisages the establishment of a textile industry based on local cotton, fruit and vegetable processing and canning plants, a cigarette factory, fish processing plants and a tanning industry. This last will be particularly suitable, since skins are at present exported in the raw state and there is much wastage. Existing industries (in Aden) are: the manufacture of cement blocks, tiles and bricks for the now-stagnating building industry; salt production; soft drinks bottling and dairy plants. In the western Governorates there are also cotton ginneries, flour mills and seed-crushing plants. Some small fish-canning factories exist at Mukalla. These are to be extended and others built, with Soviet and Japanese aid. A cement plant is planned for the Third Governorate, possibly using the extensive limestone deposits reported to exist to the east of Aden. East Germany is helping to set up factories making flour, biscuits, vegetable oil and animal fodder.

Known mineral resources are few but the country has not yet been fully explored. The Southern Yemen Algerian Petrolium Company, a joint venture with the Algerian state oil concern SONATRACH is prospecting for oil in the Hadhramaut and expects to spend \$2.5 million in 1971/72.

FOREIGN TRADE

Aden port handles nearly all Southern Yemen's trade, as well as a considerable proportion of that of the Yemen Arab Republic. Transit trade to Yemen.

however, had declined somewhat owing to the development of Hodeida. The free port of Aden attracted a large volume of traffic and all the commercial activities associated with a large port flourished, providing comfortable livings for the Adeni merchants but contributing little to the development of the other sectors of the economy. The disadvantages of a free port in the changed situation after Independence, not least the hindrance to industrial development caused by the lack of protective tariffs, led the Government, after much deliberation, to remove Aden's free port status, although there is still a free zone for transit trade.

The trade deficit continued to grow up to 1969. Government measures and the lack of foreign exchange, reduced imports in 1970 by over £7 million but exports continued at much the same level. The main commodities exported (excluding petroleum products) are cotton, hides and skins, dried fish, rice and coffee. The chief imports (excluding petroleum) are clothing, foodstuffs and livestock. Britain is still Southern Yemen's main customer, importing £14.9 million worth of goods, mainly petroleum products, in 1970, with Japan as the second-largest customer. The leading supplier of crude oil, apart from Iran and Kuwait, is Japan.

Because Southern Yemen's trade consists mainly of petroleum, her close relations with the Socialist countries are not yet reflected in the trade figures.

FINANCE AND FOREIGN AID

Southern Yemen's finances have deteriorated steadily since Independence. In 1966, gold reserves were \$1.41 million and foreign exchange reserves amounted to \$64.86 million. By the end of 1970, gold reserves had fallen to \$600,000 and foreign exchange to \$53.3 million. Foreign exchange reserves were further reduced in the first quarter of 1971, to \$52.9 million. In the same period, the budget deficit grew from 100,000 dinars to nearly 2 million dinars.

Britain abruptly ceased payment of aid to Southern Yemen after the withdrawal in November 1967, although it had been agreed with the Government of the Federation before Independence that £60 million should be provided over a three-year period, in addition to an immediate payment of £12 million. Britain did pay £12 million, but Southern Yemen received only about £2.7 million after various deductions had been made. Since then, the Republic has drawn closer to the Eastern Bloc countries. The Soviet Union, under an agreement of February 1969, which included aid specifically for fisheries, undertook to provide technical aid and experts for a number of development projects. A separate agreement, signed in August 1969, covered aid for agriculture and irrigation. The first agreement was extended in February 1970 to include aid in kind worth 5.5 million roubles and, most important of all, a low-interest 7 million rouble loan repayable over 12 years. This loan was significant in that actual financial aid was offered rather than aid in the form of goods or technical assistance. East Germany agreed to a loan of \$22

PEOPLE'S DEMOCRATIC REPUBLIC OF YEMEN-(STATISTICAL SURVEY)

milion in October 1969 and China granted a \$18
milion loan in 1970, both part of large and and trade
"parkage deals". Both cover a wide range of properts,
including in the case of East Germany, the construction of telephone facilities and the establishment of
light industries, and, in the case of China, help with
the road building programme North Korea, too, is
providing and for communications Bulgaria, Poland,
Hungary and Romania have all promised aid to set
up industries.

The richer Arah countries, too are providing and in certain sectors The Kuwait Fund for Arab Economic Development is to finance a pre investment study of the Abyan Delta and an economic survey of the whole country Algeria, as well as participating in oil exploration has agreed to give \$4 million worth

of development and Libya is considering loans for mdustrial projects The Southern Yemen Government has approached the Arab League on the subject of compensation for losses incurred as a direct result of the June War. No actual financial compensation has so far been awarded, but the League's Industrial Promotion Centre is undertaking studies in Southern Vernea.

Southern Yemen's relations with the West have deteriorated not only hecause of the British refusal to continue aid, but as a result of the rapprochement with the Eastern Bloc countines The establishment of ties with Fast Germany caused West Germany to break off relations and now the main source of aid other than the Socialist countries and the Arah states, is the United Nations

^{*} Since the closing of the Suez Canal in June 1967 the average monthly number of ships calling at Aden has fallen from 560 to 115.

THE CONSTITUTION

Before the new constitution was drawn up existing ordinances and regulations remained in force with Presidential authority replacing the powers of the British and Federal Governments. The National Liberation Frost general command which had 41 members formed the internal legislative authority. The country is divided into sex administrative Governates. The two year term of office granted to the National Liberation Front expreed on

November 30th 1969 and was formally renewed for another year Tollowang the adoption of the new constitution on November 30th 1970 a Provisional Supreme People & Council took over legislative powers The 101 members were selected from the NLF, armed forces professions etc. with 13 workers elected by trade munosis. The Council will draft legislation for a general election for a permanent Council on October 1971.
